2766. LOTW WAS

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-03-07 00:16:45 UTC
From: scottpa1960
Topic: 2766 Message: 2766

I have a couple of questions about the LOTW WAS award. I'm trying to find out any information if it is live yet. The only thing I can find is on the LOTW website under my account that it should be active by the end of February. Any update on this would be appreciated.

My other question. I have 49 states confirmed via LOTW. It is very difficult for me to work Hawaii from my QTH, but have worked three different HI ops this winter. None of them use LOTW apparently, but I did get a QSL card in the mail today from AH6OZ. If the LOTW WAS is ready or almost ready, will the ARRL accept the Hawaii qsl card along with the 49 LOTW WAS confirmations?

Thanks in advance.

73--Scott
WY3X

PS--Firebrick, why do you get all the cool DXCC confirmations on LOTW??

Get on an operate a contest or two. Most contesters use computerized logging, so chances are good that any Hawaii operators you work will submit your QSO.

The same is true for RTTY operators.

The ARRL does this for DXCC -- you can submit a combined application. I'm sure they'll have some sort of policy for WAS, whenever it is they get it worked out.

> PS--Firebrick, why do you get all the cool DXCC confirmations on
> LOTW??

You mean the J68RI? I got him on three bands. Contests, man, contests!

Bill,

Thanks for the comments about the DXCC being allowed to be a mixed variety. Hopefully WAS will be the same way.

As for contesting, I am very active in contesting of CW, RTTY and some SSB. I have 2,870 qso's logged since Oct. 30, 2005, and of those 1,367 are RTTY qso's. So, its just a very unusual situation that I don't have Maine logged or confirmed on RTTY. (I have worked Maine on CW several times this winter).

AH6OZ has definitely confirmed some Q's with me via LOTW so good chance he'll do same with you!

Numerous other SSB/RTTY contesters have done same -- among them KH6FI and KH6GMP.

Mike,

Yes, Walt indicated to me he uses LOTW, so I am hopeful he will do
that again soon. Looking back at my log, I've also worked the
following from Hawaii: KH6WT, WH6R, and KH7X. I have sent an email
each time I have worked HI, and one person didn't know what LOTW was.

2771. TQSL Cert renewal

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-03-07 01:58:27 UTC
From: k2yr
Topic: 2771 Message: 2771

I just finished renewing my TQSL certificate. First, everything worked fine, all is well.

But... two things I noticed that do not go along with the detailed instructions that are posted on the LotW site.

One: After I loaded my new certificate, it did indeed make the red circle/bar go off, BUT my old certificate remained!

The instructions say.... "When your renewal .tq6 file is returned and loaded, the red circle/bar will go away as will the original certificate, leaving only your renewed certificate." WRONG!

So I CAREFULLY deleted my old certificate. (I first made sure I had backups of the .p12 files for both my old and new ones.) I deleted the old one because I thought having the two would make things unhappy?? Maybe not?

TWO: The expiration date for my new certificate is 3 years from now??? I thought they had to be renewed every year?

What is correct? One year or three?

Thanks,
-Carl, K2YR

It will cause you to sign logs using the now outdated certificate (at least it did in my case) so deleting the duff one is a good idea.

This circumstance is (poorly) documented on the LoTW page. See the Aug 23, 2005 entry, "Renewing a Certificate leaves the Old Certificate also". I don't know why the detailed instructions haven't been corrected.

>TWO: The expiration date for my new certificate is 3 years from
>now??? I thought they had to be renewed every year?
>
>What is correct? One year or three?

Three years makes sense. The one year renewal period is too frequent given the low risk of misuse. If they've really moved to three years that'd be a good thing.

Hi:
I just checked my log and I have AH6OZ confirmed by LoTW on 15M from
the 2002 ARRL DX SSB contest.

You might want email him and request him if he would upload the QSO
you need. He can upload a single QSO if he doesn't have the whole log
ready.

I don't think this feature of LoTW is used much, but this is a good
example for it's use.

Might as well go for 100% LoTW WAS and save the hassle of splitting
paper and electronic.

Another HI station confirmed by LoTW, is KH6GMP.

I have over 30,000 QSOs in LoTW (every QSO, going back to 1975 as a Novice). I only have about 1000 or so RTTY contacts, because I just got active on that mode in the past year. I do have a confirmation for Maine on RTTY, with W1SLF.

LoTW confirmations are partly luck, I've decided. For example, I have gotten an Sweep in SS Phone at least six times, but it wasn't until recent years that I actually got enough LoTW confirmations to qualify for WAS (Mixed, Phone and 20m). Working the stations is on thing, getting the confirmation is another.

I too can confirm this with my last certificate request, it lasts 3 years.
I thought it was because a "portable" cert, but probably this is not
the case...
my license in HI9 only lasts a little more than 3 months, and the
certificate 3 years....

A couple of points to ponder:

1. Putting AH6OZ into 'Find Call' in LoTW shows that he has not uploaded his log since 01-01-2004, so I guess he's not really into LoTW, and

2. HB9BZA's web site - http://rchalmas.users.ch/lotw/lotw-dx.html - lists 54 KH6 calls in LoTW, so hopefully, Scott will be able to work on of those for LoTW WAS!

Or that Ham radio is just a HOBBY and he has other things to think about. Or that he hasn't made that many qsos and prefers to wait until he has a fair amount of q's to upload.
The thing is that is he's already in LoTW, so there is no hurry. It's just when your dying the get a certain qsl in the mail ..you wait, write to the manager, cry, sweat etc...then one day the qsl comes in the mail...you look at it for a while, "think oh great, at last"..-.then throw it in the qsl stack and don't remember about it for years.

From: scottpa1960
Topic: 2766 Message: 2782

Rob,

Exactly what you said at the end of your message is the reason I am a big advocate of LOTW. I hate exchanging QSL cards. Its so much easier to take a contest .adi file of say 300 qso's and within 2 minutes you can have it uploaded to LOTW. I did receive my card from AH6OZ yesterday and its now hanging up in the hamshack. Most others I get just go into a big pile never to be seen again. Yes, I do send out a qsl card it requested, but whats the point when we can get credited with LOTW.

By the way, I did notice in my logbook I have worked 3 stations in Maine that I have worked on RTTY since January. I looked on HB9BZA's site last night and none of them are registered on LOTW. So, I am sending out paper qsl card with sase so hopefully that will be out of the way and I can get the RTTY WAS award when its available too. Sure would be nice though to have HI and ME confirmed LOTW style.

> The thing is that is he's already in LoTW, so there is no hurry. It's just when your dying the get a certain qsl in the mail ..you wait, write to the manager, cry, sweat etc...then one day the qsl comes in the mail...you look at it for a while, "think oh great, at last"..-.then throw it in the qsl stack and don't remember about it for years.

From: scottpa1960
Topic: 2785 Message: 2785

I sent an email to arrl-help (at) arrl.org and asked for clarification on when the WAS award would be available on LOTW. So far there has been no response. Did I send my question to the wrong email address? If so, can someone either post it here or to my email address which is wy3x (at) arrl.net

Also, I was under the impression that the LOTW folks in Newington monitored this site. I was hoping to get an official reply to my post here. I'm really not trying to be pushy but as a member of the ARRL I was hoping to hear something, especially when the LOTW website said it would be ready no later than the end of February. (It didn't say 2006, however).

Interesting about the 3 years till expiry date. I noticed when I got my TQSL cert which is the first one for me that it's expiry date was about 3 years away but all the info still said 1 year, very confusing. I also thought I read somewhere that you got an email reminder when the renewal was comming up, does this happen or not?

I am brand new to LOTW and have read and re-read the instruction for uploading logs at the ARRL web site. I have never seen anything so confusing in all my life with all the different certificates, attachments, etc. Setting up on-line banking is a snap compared to all of this.
Wouldn't it be simpler for the ARRL to issue five unique 16 digit serial numbers assigned to a particular call sign, have one serial number included in the subject line of an email, attach the log file and that would be secure enough. Once all five serial numbers were used you would request five more for future submissions.

16 digit numbers are secure enough for credit cards and, sorry guys, but my money is a lot more important than a QSL from a rare DX country.

I'll learn the system and use it but I find it hard to believe anyone could come up with a more complicated system of making something secure.

Since the object of the LOTW is for the ARRL to make money (it's always about the money) I think that an easier system would fill their coffers a lot quicker than all these hoops we have to jump through as it is now.

I have just put on my asbestos suit to protect myself from the flame mail I will receive from this post but that's how I feel about the subject.

Ken,

I find that once you have your initial certificate, the upload procedure is simple, quick and straightforward.

-Export your log to ADIF
-Sign the ADIF with TQSL
-Upload the .tq8 created by TQSL on the LoTW upload page
-Done

Welcome to the club, Ken.

Your observations have been echoed many, many times since LOTW began, but the ARRL is incredibly deaf to our complaints. The overly-complex procedure is one of the strangest, most inexplicable things I have ever encountered in my entire life. It is as if QSLs needed higher security than the plans for constructing nuclear weapons. Mere money is trivial by comparison.

The only way this will ever be fixed is by action of the ARRL Board of Directors. I suggest you write your board member and let him know in no uncertain terms what you want and how you intend to vote at the next election, and then follow through.

Ken WS4V wrote..."and that would be secure enough."

Secure enough? We're talking LOTW and DXCC credits here, pal.... how could anything be "secure enough" to protect that? There is apparently a belief that some hams are so clever and devious that they could...and would... hack into the LOTW system and give themselves credit for entities they haven't worked. Or even worse, muck about with the records of others. I know, that's almost beyond belief, isn't it? But there it is... and because of that awful possibility, no system can really be "secure enough" for LOTW.

But seriously, Ken... you will find that many logging programs now have a built-in capability to upload to LOTW with just a few keystrokes. I use DXKeeper, part of AA6YQ's brilliant DXLab completely FREE suite of programs that will seamlessly do everything but kiss you goodnight, and I think it's absolutely the best I've ever tried...even better than the ones you have to pay $$ for... google it and check it out. Once you have your LOTW certificate from the ARRL website, DXKeeper handles LOTW so easily a caveman could do it.... oops....

Hello kc4ih,

Ken, some logging software already have "one button" support of the
LoTW: signing QSOs, uploading them to the LoTW server, downloading
received confirmations, and marking them as "received" in your log.

Initial steps might look complicated, but no one can say that DXCC
integrity is the thing in question after LoTW implementation. That is
the point, not registration hassle.

From: Joe Subich, W4TV
Topic: 2792 Message: 2797

The short answer is - NO!

A 16 digit credit card number is not secure at all ... it also requires the CVV number, expiration date, name as is appears on the credit card, and billing address all of which must match the data on file with the card issuer (bank) before an on-line transaction will be approved.

Much of the "security" actually takes place in the bank's "back office" since they already have access to dossier on any potential new customer in the form of the credit reporting service databases. They can check every item on your new application (including previous payment history, employment history and address history) for verification purposes before opening an account. Finally, they have the ultimate cross-check ... the check or wire transfer you use to initially fund your account must clear before you are able to use the account (money talks ... bs walks).

LotW is very simple compared to what you don't see in on-line banking. With LotW you fill out an application and wait to receive a card (just like the wait for an initial credit or debit card). When you receive the (post) card, you go online to activate the account. Once the account is activated, you are sent a confirming certificate that you install on your computer (and backup on a floppy, etc. in case you ever need to reinstall tQSL). When the certificate has been installed, you may use it to sign ADIF files for upload to LotW.

It is a very simple, straight forward system with reasonable provisions to insure security and data integrity. If you use any of several logging programs that now support LotW uploads, once you have installed your certificate, you don't even need to do anything more than click a button that says "upload any new QSOs to Logbook of the World."

73,

Speaking as a thick 'limey'. What are you finding hard ?

Unless you are in fact trying to go in via the ARRL website as you say and not the LoTW one - now that could be hard work <grin>

I have a password to access LoTW on the www [and my browser saves that anyway, just like it does with yahoo gruppen]

I have a password with which to 'sign' my adi files - and I chose that one.

I sign the file, attach it to an email, and send it. Ten minutes later [on a contest weekend it might be 20] I get an answer. Job done.

If I want to submit via the www. Log on to LoTW using the 'given' password, click on the correct button [which even I can find] and browse for the tq8 file [duly signed of course] and click send.

I upload on average eight logs a month for myself and others, and run four certificates [soon to be 6]

Graham.

2799. secure enough????

Yahoo group: ARRL-LOTW (2003 — 2007)

Jerry and Joe are correct. How can our qsl's and credits EVER be secure enough.

as for your analogy, your bank account is hacked, you have insurance
your credit card is hacked, you have insurance
your car, house, boat, keys are stolen, you have insurance.
if your wife is stolen by a friend, you can get another (why though?)

IF YOUR QSLS and or DXCC CREDITS are stolen...
Your SOL....lol

You gotta put this in the proper perspective.

Ok Neil,

Well see when I get the reminder then 1 or 3 years. They sure do
keep you guessing about some things.

No flames Ken. Hang in there. You will like it when you are up and running.

As for the question about security, yep it's required you wouldn't beleive what people will do to get a DX call in there log and I didn't think ZL was that rare yet!

73 John ZL1BYZ.

Fun thread. lol
I'm probably the most anal guy you ever met about backing up.
And I'm sure you know about it....but one of the cheapest and greatest devices ever invented...this little Flash Drives.
On eBay, real cheap and you can store all your important stuff, like logs etc.
The kind of stuff that REALLY matters and it's easily accesible from any computer.

I'm thinking of taking out my pacemaker and replaceing it with a Flash drive and a Firewire port.
And don't forget your web space that your ISP includes.

LOL

Something most non LoTW users don't realize...Updating your log to LoTW is also a form of 'online storage' and you and download from the ARRL server your entire log, not just your qsls, in .adi file anytime you need to restore it.

~~~~~~
Flash drives should not be used for permanent, long time storage.
They are only good for about 10k read/write cycles and their life
expectancy is only a few years. They are best used for temporary
storage of data being transferred between computers.

At this time, the longest-lasting storage medium I know of is premium
quality CDs such as Maxell's PRO series. Maxell advertises that they
have a lifetime of over 100 years when stored properly.

I'm not interested in 'long term' storage....
duh....in 40 years I won't care much about my log...

I care about tonights backup saving my butt tomorrow when the computer won't boot up.

The fact that I can then plug it into the new computer two days later and be back in business is the goal.

Doubt the Library of Congress will be drooling over my qsl logs. hihi

Then USB drives are fine. The word to remember with USB drives is "temporary".

Any backup is better than no backup. CD's have a greater life expectancy than most media, but if they aren't moved off premises and burn up or become damaged with your computer they aren't very good either. The best backup is an off premises backup. There are programs available that will automatically FTP the files you select at a particular time of day.

2811. TQSL and TQSL CERT

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-03-11 04:33:38 UTC
From: wb4mnk
Topic: 2811 Message: 2811

I am going to increase my hard drive space with a new Hard Drive and will be starting with a fresh system. I want to be sure that I am able to use LOTW with the DXKeeper log as I am using now. Would someone please give me the directions on how to save the correct TQSL where I can install it on my newer system.

2812. Contest QSL-Rates Statistics by DK1BX

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-03-11 15:24:26 UTC
From: dk1bx
Topic: 2812 Message: 2812

Hi LoTW User,

Before you read the following statistics, please notice that I am
not a great contester. Usually I make 300 to 500 QSOs on a 48-hour
contest, but I think the result below would be similar to 1000 or
2000 QSOs.

I checked the QSL-Rate of the following 5 contests:

Contest	LoTW User	QSL/QSO all	QSL/QSO LoTW user
BARTG Spring 2005	24%	22%	91%
WPX RTTY 2005	25%	21%	86%
CQ WW RTTY 2005	28%	22%	76%
WPX RTTY 2006	33%	24%	73%
ARRL CW 2006	60%	17%	26%

Remark: In ARRL CW contest I was looking mainly for LoTW-User.
(therefore 60% LoTW-User in my log)

Note: column 2: Percentage of LoTW-User in my contest log.
column 3: QSL/QSO rate in LoTW of all contest QSOs.
Column 4: QSL/QSO rate of QSOs with LoTW-User only.

Example : In WPX RTTY 2005 contest 25% of my QSOs are
LoTW user, 21% of all QSOs are confirmed in
LoTW and 86% of the LoTW-User have confirmed
their QSO.

Summary:

The advantage of QSL-Rate is about 23%, in ARRL CW contest only
17% and only 26% of LoTW-User have confirmed the ARRL Contest QSO
in LoTW.
Why don't load the US-Hams their contest log into LoTW yet ?

Art,

The "right" way (and safest, in my opinion) is to save each certificate as a .p12 file. Open tQSL Certificate, select a certificate, click "Certificate" in the menu bar (or right click on a certificate), select "Save" and write the .p12 file to a floppy, jump drive, CDR, etc. that you can read in the new installation.

When you set-up your new hard drive, download a fresh copy of the latest version of tQSL and install it. When the installation is complete, open tQSL Certificate and select File | Load Certificate File from the menu bar and follow the prompts to load the .p12 files you created earlier.

You will need to recreate your station locations in the new installation. Unfortunately, there is no process for saving them.

73,

2815. 1.7% QSOs confirmed - not worth the effort

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-03-13 20:22:15 UTC
From: kc4ih
Topic: 2815 Message: 2815

Disappointed is the only word that comes to mind after jumping through all the hoops to get my logs entered into the Logbook of the World. I uploaded 3256 QSOs and only 56 confirmed. Out of the 56 I need none of them for any award, all very common countries. I have worked about 260 countries and confirmed about 245 with real QSLs so I felt there should be way more in the files of stations I have worked.

Since this is designed to be a money making thing for the league I must suggest that they come up with a backward compatable system that is SIMPLE so that some real DX will start using it. Maybe if you are looking for WAS or WAZ it might help a little but very little. A 1.7% confirmation rate is not worth all the hassle.

73 and send me your paper QSL cards,
Ken, WS4V

Mine is 14.3%, on 2212 QSOs. I have 59 countries for DXCC, 32 states for
WAS. This seems pretty reasonable to me.

I don't see why people assume this is just a fundraiser for the ARRL.
Feels like a service to the community to me.

Thanks Dick for your input on Lotw. If most of my QSOs were from the International DX contest last weekend I wouldn't expect a good confirmation percentage but only about 300 Qs were from the contest, the rest were from previous years of QSOs. Do any of the rarer DX countries ever use Lotw? I'm working on 5 band DXCC now and need several on 40 and 80 but it looks like anything rare is not going to be there.

I will continue uploading logs since they may help others and unless I use it for confirmation it doesn't cost anything. It is a great idea but in functionality it doesn't amount to much. At least the Post Office will get some more business!

Congratulations on your 14.4% confirmation!
73 and thanks again,
Ken

You didn't say over what timeframe the QSOs took place, but if they were mostly from pre-LOTW days, that might explain the low return. I currently have 4,683 QSOs (since 2000) entered into LOTW with 957 QSLs for a return rate of 20%. While I have paper QSLs for all 294 of my mixed total, there are several mode and/or band credits for which LOTW has come through. One of these days I wlll enter all my pre-2000 paper logs for my previous call (W6SWE) and see if that brings up a few more.

I'm glad to see that WAS will soon be available via LOTW--there are several I need which already show up on the web page. Hopefully IOTA will be added one of these days, as well.

73,
Bob, N7XY

Depends on your definition of "rare", I suppose.

I have Bhutan (A5), South Sandwich, South Georgia, Ducie, Wallis,
Temotu, St. Paul, Clipperton, Jarvis, Palestine, Jan Mayen, Kerguelen,
Heard Island all confirmed through LoTW. Are any of those rare?

You've got to expect dxpeditions to be a bit slow on posting their logs
on LoTW, otherwise they won't get the level of contributions that they
need.

>I will continue uploading logs since they may help others and unless
>I use it for confirmation it doesn't cost anything. It is a great
>idea but in functionality it doesn't amount to much. At least the
>Post Office will get some more business!

And that's the key. If everyone decides it's too much effort, then LoTW
won't be successful. It looks to me like there's enough critical mass.

I'm at less than 4% confirmed, but that's because I work exclusively
DX, and the hoops for those stations are often harder to jump through.
(But I HAVE uploaded my GU0/WA1SPT logs to LoTW - that's easy once you
get a single certificate.)

Well, your return rate depends on a lot of factors.

I have over 30,000 QSOs uploaded, with nearly 5,000 QSLs. Many, many
of those contacts were made during contests, much of them domestic
(SS, NAQP, etc).

So, why is my return rate nearly 10x that of yours? Depends.

1) US/VE contacts - the return rate of US and Canadian contacts is
vastly higher than that for DX, mainly because of the simpler
procedures to get certificated in LoTW.

2) Contests - contestors have been computerized for many, many years,
so contest logs are more likely to be uploaded. If you just submit
casual QSOs, they are less likely to be confirmed.

3) Age - the return rate on contacts in the last few years is much
higher than that for a decade or so ago. And those two decades ago
have really poor return rates. Main reason is that a lot of these
logs aren't computerized, and people don't take the time to type them
in. (All of AA4LR's logs are in - every contact since 1975)

This rule breaks down for very recent contacts. People don't upload
logs in any predictable fashion. Quite a few amateurs won't upload a
contest log until after the deadline for log submission is passed.

> Out of the 56 I need none of
> them for any award, all very common countries. I have worked about 260
> countries and confirmed about 245 with real QSLs so I felt there
> should be way more in the files of stations I have worked.

Not surprising. With a DXCC total of 245, you're starting to get into
the uncommon to rare DX. Even if they are computerised, paper QSLs
are a undeniable revenue stream for many DX operations.

> Since this is designed to be a money making thing for the league I
> must suggest that they come up with a backward compatable system that
> is SIMPLE so that some real DX will start using it.

I don't think it was designed to be a money-maker. If anything, it is
a loss leader or perhaps revenue-neutral.

It's up to DX stations to start using it. That is happening, but very slowly. Things have picked up a bit since the WAS award went (half-way) online.

> Maybe if you are
> looking for WAS or WAZ it might help a little but very little. A 1.7%
> confirmation rate is not worth all the hassle.

You're definitely giving up on it too early. Keep uploading logs. I upload mine once a month or two. I've seen my return rate increase as the adoption rate increases. The more you use it, the more it will be worthwhile.

You've already done the hard part -- getting the certificate.

Hi all,

I was a little surprised to read about the poor return rate for one person.

Personally, I have been on LoTW since the beginning, and now have just under 40k contacts loaded on to the system, and from that, I have just over 20% confirmation.

There is a good range of countries represented, which is good, but there could be more!

I have also had LoTW confirmations from a few countries for band-slots that I have previously found it very hard to get confirmed either direct or via the bureau.

For me, one of the advantages of LoTW is that my expenses for QSL'ing have been reduced, and it also saves a lot of time.

So, if your rate seems low, stick with it, and it WILL improve!

It is also interesting to note that the usage of LoTW seems to indicate that those of us who use RTTY have far higher rates than for otehr modes!

73 for now

Topic: 2815 Message: 2826

I calculated my received QSL percentage & it stands at 13% confirmed. Think I will try & work out what the percentage of US stations is. Quite a lot higher I should expect.

I have been plodding away with QRP & not having much time to operate due to family circumstances. I stand at 45 states confirmed & 69 countries. The reason I am so pleased with LoTW is that about 25 years ago I applied for WAS & remember the trouble of sending QSL cards for the award & paying return postage to get them back. I vowed then that I would never apply for another award & I didn't. I know it is easier now with local check points but then it was a hassel.

In my opinion the use of LoTW will increase greatly over the years. It must be a breeze for contest station managers. I wonder how much data storage capacity the system has?

Of course I still use the RSGB bureau & return cards to anyone who sends me one but the bureau has taken second place for me.

As I said before we have to keep spreading the word

From: Dave Lindsay
Topic: 2827 Message: 2827

The percentage of my confirmed QSL's from US stations is 66%. So I have another 68 countries confirmed from the other 34%.

Any mathematicians out there who can forecast when I will get DXCC. :-)

It's all a matter of perspective. I've been licenced since 1969...
been an active DXer and Contester, but never got my DXCC award because
it was just too much trouble. Now with LotW I finally have DXCC!!! It
is just so much simpler!

Granted, I'm pretty comfortable with computers... but so are most
younger hams (of which I am not a member)... For the computer literate
generation, it's SASEs and IRCs and Bureaus and handling and sorting
all those cards that represents a hassle... LotW *is* the simple way
to get DXCC.

I had a talk last week with one of the HQ DXCC people who deal with LotW. The long awaited rollout of WAS via LotW should be this week. There are plans to do WAC, WAZ, and negotiations for doing IOTA! Imagine IOTA without struggling to get a card and then sending it off to a check point!

Does ARRL make money from LotW. The answer is they get money for the service, but none of the award programs make money. LotW should have one or two programmers assigned full time to get it going. The IT guy does most of the work outside of normal working hours. If they had more money, the new stuff would happen sooner.

I just wish there were a straight forward way for the DX stations to get into the program. If you are in a big government country (maybe like the UK or FRG), the process should be easier for those guys. I can see that the documentation could be an issue for the rarer entities since even getting papers for DXCC credit from some is tough enough.

I don't know if the QSL cards add or subtract from an expedition's revenue stream. My limited experience would seem to indicate that most contributions don't go thru the QSL manager. Money that arrives at the QSL manager seems to just pay for the QSL and postage expense. Very little is left over from that. Most of the big expeditions get what my budget can afford at the time. I enjoyed K7C and 3Y0X. The K7C I did't really need badly but the 3Y0X I did need. But my contributions depend more on how the expedition is organized and by whom it is organized than whether they are rare enough. BTW 3Y0X will eventually have their logs on LotW. So If you can wait...

I doubt that will ever happen. It could too easily be perceived as an "insult" to a country that was assigned the more stringent LOTW requirements, and nobody would want to risk that. Best to have the same requirements for everyone.

LOTW is great, but let's not forget that sending a QSL card request to a big DXpedition like 3Y0X or K7C is always a good opportunity to contribute a few dollars....or a few dollars MORE.

That's great news about LOTW and WAS, WAC, WAZ, etc... thanks, Ed...

This past weekend I worked the BARTG Spring RTTY contest. Of the 95 qso's I have had 33 LOTW confirmations already...thats better than 33% and I'm sure in the next few days the percentage will go much higher.

Don't give up. I find the RTTY gang are the most likely ones to respond via LOTW and the CW ops the least likely to use LOTW according to my logbook.

Hi:
In reading the LoTW Reflector I noted that some users
stated that their new Certificates were now good for
3 years instead of the previous 1 year.

It would be a great step forward !!!

Can anyone clarify this.

Hi All:
I just received this reply from Wayne Mills at the ARRL:

"That is correct. Three years. (The FAQ is wrong.)

73, Wayne, N7NG/1"

I suggested that it might be worthwhile to post this info on the
LoTW "Users Home Page" like they did for the "WAS Application" today !!!

Anyway 3 years is better than 1 year, but the "Expiration Date" of your
current license would be a lot better !!!

Sometimes good things come in small steps :-) !!!

Cool! And I'm glad to see they've got the ability to link to already-earned
awards, like DXCC has. I've just gone on and requested my link. Will be
interesting to see how long it takes to set up.

One thing I don't see on the list is 5BWAS. I guess you get 5 different
single-band awards and then submit for 5BWAS?

Yes, it finally is activated. I have 49 states confirmed via LOTW, and the one state I need LOTW confirmed is Hawaii. I have a QSL card from AH6OZ, and I read today on the LOTW site that I have to go about 20 miles to verify the validity of this one qsl card. I emailed the card checker today but no response. I wish I could save the aggravation and scan the dang thing and send that to ARRL instead of wasting a couple gallons of gasoline because us hams aren't always the most trustworthy. I was hoping the process was going to be a lot smoother than this with mixed LOTW and qsl cards.

2842. hmmm, now how do I get this report

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-03-23 13:07:21 UTC
From: FireBrick
Topic: 2842 Message: 2842

I just saw that my LoTW WAS submission was 'Finished'.
I had applied for the 'Basic' and a number of band/mode stickers.

While my logging software knows which qsos I have that are LoTW qsled, it doesn't know which specific qso is the one that was 'credited'. The first LoTW qsl received for a station may NOT be the one credited as I may not know what state he was in for that qso.

I can't just assume that the FIRST qso for that state in that band/mode that was LoTW qsled was the one that received the credit.

I can see in the WAS module which qso it was, but that means manually marking each of the 50 states that was credited for that band/mode into my log.
I can click on each state's qso, but it takes a moment or two for LoTW to find and display the details for that qso.
That's a bit more than even a data junky like me wants to sit through.

Anybody know of plans for obtaining a printout?

I experimented with the LoTWdownload page, I can sort by band and mode, USA only, earliest LoTW qsl. That did give me a report with qsl's marked with the check for submission. Hopefully I can take that and import it into an Excel file.

A balanced diet is a cookie in each hand.

Charles HS0ZCW / K4VUD wrote:
"I just got notice of expiration of my Logbook World for all my calls. I have eight calls.....it is way, way too much trouble to bother with.....I guess I will just have to struggle along without Logbook of the World."

Having gone through a similar period, I can understand the frustration of dealing with security requirements one doesn't understand or agree with. However, there's help available on a reflector devoted to helping people overcome problems with LotW at http://groups.yahoo.com/group/ARRL-LOTW/

PLUS... there's lots of logging software that makes uploading and downloading to LotW a matter of a few keystrokes.

Requiring a certificate for each callsign isn't unreasonable (how else could they do it, really), and I'm pretty sure that renewed certificates are good for 3 years. It's a pain, but it's like CW... there's a plateau... once you get past that, it's really not so hard. Besides, only a ham that's dedicated and motivated holds eight callsigns, Charles, so I know you're no quitter.

I still think LotW is way too security conscious for what it is, but even so it is a good and cost-effective way to acquire and give confirmations necessary for DXCC, an activity that thousands of hams worldwide .. including me... devote much attention to. And DXing populates our ham bands and helps keep amateur radio alive. So it's worthwhile to spend a few extra minutes dealing with the admin requirements of LotW, even if only for the good it does for the hobby.

Please don't give up on LotW, Charles. Hang in there. Join the reflector and get a little help. I'm sure glad I did.

Just renewed 11 certificates. Having to type my address and password
over and over was so much trouble. What a waste of 10 good minutes.

Ron

2845. one little difference between LoTW and Honor Roll

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-03-24 15:25:09 UTC
From: FireBrick
Topic: 2845 Message: 2845

I may not be reading this correctly but does LoTW and Honor Roll flip the numbers?
Seems in Honor roll, the listing is always current/total, 333/355
Where as in LoTw Awards Status menu it's Total/Current, 355/333.

I'm not too bright and I have to look at it twice before I remember the inconsistency.

Only problem with bringing this up...if you change one of the ways to bring them the same, it will now take me 3 years for my brain to be retrained.

Not sure I have that much time..

Age is a high price to pay for maturity!

I would suggest maybe Charles might look for a QSL manager that understands LOTW and let the manager workout the details, then all he would have to do is supply updates to the logs to the manager. Eight calls doesn't seem like that much of a load, I have eleven certificates, all on LotW, and just upgrade a number of them. It took less than 15 minutes to upgrade six callsigns and duplicate the updates on my notebook computer too.

On the subject of security. There are some real computer literate hams around, ask the question, "Do you want some ham hacker ahead of you in the DXCC listings, without earning it?" Cerificates would be very hard to hack.

I don't believe that LotW has too much security. Some will go to extreme measures to get an extra QSL. You should have seen how some tried to get Wake Island cards from me. Before Lotw, I had a European that listed half a dozen callsigns I worked and claimed his call was in the middle of them, which it wasn't. I just happened to have a recorder on for that session and I checked it. I wasn't hearing Europe at the time and there wasn't enough time between the QSOs for him to even have gotten his callsign in, let alone work me.

From: FireBrick
Topic: 2847 Message: 2847

So for me....11 callsigns, mine and the stations I manage...
Total of 10 minutes renewing every 3 years....

At my age, I'm glad I can do anything for 10 minutes...hopefully in 3 years hence!

Everyone thinks about the security as 'someone cheating and getting ahead of you, wrongly'.

I believe the level of security is more:
"preventing someone from getting in and ruining anothers account, ruining the whole system" etc.

With the 'certificates' there is a 'trail'.
We know their are cyber-brats who damage files 'just because they can'.

If someone is cheating, they will eventually be found out, but if my account is wiped out...well now I have a lot of work to do.
So I'll go that extra step just because I don't want to have to sort through over 35K cards for every band/mode credit again.

From: FireBrick
Topic: 2851 Message: 2851

to include all the info about your location.

I'm working on Counties and WAS and I see a few that have forgotten to include that info in their LoTW uploads.

When you go to 'sign' your log for submission, use the TQSL module to go to the menu item 'Station'.
Choose Edit Station Location
Select the Callsign of the qso's your submitting
and click on the 'Edit' button.
The first window asks for Grid, ITU zone, CQ Zone, and IOTA ID.
****Note: the windows asks for ITU Zone first and then CQ Zone. A lot of people are inverting the two.

I suspect it's the next step that lots of people are missing.
Click Next, and the next page asks for your State and your County.
(funny item here, I can't find Alaska or Hawaii,in the list of states, guess they are not considered states but DX in this context)

You don't have to do this each time, enter it once and it remembers your data.
If you move locations, you must change the Station location to reflect it's new state and county and all qsos from then are will indicate the new data.

With WAS now current, and hopefully IOTA and Counties in the future, you may want to make sure you have that info included in your submission.

As many of the logging programs will download the location information, it will help you in tracking your WAS, County, and other awards.

Please and thank you
Bill

I received a SSTV LOTW confirmation this week from Greenland for my very first SSTV LOTW confirmation ever. The qso was from 2004. I don't think I've even been on SSTV since then.

(Just trying to keep up with FireBrick with LOTW successes) ;-)

2856. Disappearing 6m credits

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-03-30 13:47:43 UTC
From: Ivan Wilson
Topic: 2856 Message: 2856

Just logged on to LoTW and noticed that overnight, my total challenge credits awarded has gone down from 706 to 618. On displaying 'all credits' for challenge, I see that only 13 of the 101 6m credited calls are now displayed. The 618 total seems to be my 160 thru 10m credits plus 13 6m ones (although the total for 6m in the Awards column still reads 101 and all 101 are shown when the 6m credits is displayed.

I noticed last week that having helped a friend sign up to and link his LoTW account to his DXCC account, non of his 6m credits were listed when Challenge callsign credits was displayed but were when 6m call credits were displayed.

Anyone seeing the same problem?

Regards - Ivan G4BGW

2857. Strange stuff in WAS

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-03-30 23:33:26 UTC
From: Mike(W5UC) & Kathy(K5MWH)
Topic: 2857 Message: 2857

I looked in my WAS stuff last night and found numerous QSO's listed there with a symbol of M! by the check box. There is a notation about some problem with matching data. That's strange as I have had no problems with matching data on any DXCC credits. I'm wondering why this appears only in WAS. Any ideas?

Could you be a bit more specific as to what page/screen you are seeing this on.
I think you mean the "Your QSOs" screen.
And do you mean in the square box between the QSL and WAS columns?

I went through dozens of pages and did not see any characters such as you described.

Just a shot in the dark, are you using anything other than the default font for Windows Explorer????
Are you using a different Browser?

The "M!" means the QSO doesn't match the associated QSO filter applied
to the active WAS account.

For example, I have a bunch of stuff in LoTW for operations from
Guernsey. The filter for my WAS account says to ignore those, so they
show up as "M!" in the log.
Look at the filter you're using to figure out why LoTW thinks they
don't match.

When you set up a WAS account, you set up a QSO set that's used to
select the QSOs that apply to that account. What the "!M" means is that
your QSO set definition does not select those QSOs.
(Date, callsign, etc don't match.)
-Rick

2862. received today: 9K3MU

9K2MU via LoTW for a 30m & challenge credit.
(funny thing is...I had incorrectly marked it received in my log)
A examination of my DXCC card box should that I indeed did NOT have this band mode confirmed.
In this case, LoTW was far smarter than me.
(actually my XYL says 'rocks' are far smarter than me, guess she's right!)

Thanks to Murtada & his manager for the qso & qsl.
Thanks to LoTW for indicating my error.

Why is it called lipstick if you can still move your lips?

I'd never seen that !M indicator.
But the reply explaining that it doesn't fit a rule made me go look at what I set up.
In my WAS account, I created a rule that includes ALL qso's with my 3 calls.
(all calls were at same location, novice, advanced, and extra)
So all qso's were eligible to be counted for WAS.

Could it be that you 'didn't' create a rule to include qsls for a previously held callsign?
Or that callsign was from a different geographical location?

If you go to 'Modify Account' for each WAS account, it will show you the related rules.

AND (from the instructions) "At least one rule MUST be included in a QSO Set in order to match any QSOS."

So if you didn't include a rule such as
Include QSOs matching..... Call Sign = W5UC

Then no matches can be found.

Hope this gives you a clue.

2866. Certificate renewal

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-04-01 01:31:09 UTC
From: Dave Lindsay
Topic: 2866 Message: 2866

My certificate is listed as expiring on 11th May 2006. When do I renew it, before it expires or once it has expired?

Why don't they just leave it as it is? It is still me at the same address where I have lived for 40 years with the same call for nearly 30 years. Must be a reason I suppose.

I suggest renewing BEFORE expiration.
Avoiding trouble is my motto.
And I've been seeing that now the expiration period is now 3 years for people recently renewing.
Hopefully that's true.
I've got a bunch of certificates for all the stations I manage.
renew early, and if I goof up, there's time to fix it.

>My certificate is listed as expiring on 11th May 2006. When do I renew
>it, before it expires or once it has expired?

Before it expires, as you can not use an expired certificate to request
a replacement. It's a simple thing to do with a current certificate and
a right pain in the arse without.

>Why don't they just leave it as it is? It is still me at the same
>address where I have lived for 40 years with the same call for nearly 30
>years. Must be a reason I suppose.

The replacement will be good for three years. Hope that makes it a bit
less annoying.

Topic: 2869 Message: 2869

J68AS via LoTW for a couple of band/modes
including the 40 meter rtty band/mode I needed.

I had just printed the cards, sase and put them into a mailer when I saw the LoTW confirmations.
Great timing. Saved two stamps.

I 'believe' the manager who uploads is N9AG.
I think he also does J6DX, from whom I need a 40ssb qsl.

Thanks Scott.

My brother-in-law is so dumb he sold his car for gas money.

2870. 12 Easy Steps to LotW Success

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-04-01 13:59:43 UTC
From: Jerry Keller
Topic: 2870 Message: 2870

My friend Rick N6RK came up with the following easy 12-step process for joining and using LotW:

Simplified Logbook of The World (LOTW) instructions.
Total working time under an hour.

By Rick Karlquist N6RK

First 12 steps you only do once.

Steps 1-6, <15 minutes

1. Create directory My Documents/lotw.

2. Go to
http://prdownloads.sourceforge.net/trustedqsl/tqsl-111.exe?download
and download Trusted QSL program to My Documents/lotw directory.

3. Start/Run/My Documents/lotw/tqsl-111.exe to install program. Delete
tqsl-111.exe.

4. Start/Programs/TQSLcert. Menu: File/New Certificate Request. Wizard
starts

5. Fill in your call, DXCC entity, QSO begin date, leave end date blank,
name and
address as shown on FCC license and email address. Leave password blank.
QSO
begin date is when you got on the air from your current QTH. (You can do
other QTH's later).

6. Save .tq5 file to lotw directory and email as an attachment to
lotw-logs@....

7. Wait a few days for postcard from ARRL (USA stations only).

Step 8, < 5 minutes

8. Go to https://pk1.arrl.org/lotw/password and enter your call and number
on postcard.
Note "https" not "http" (USA stations only)

9. Wait for email from ARRL.

Steps 10-12, < 15 minutes

10. Open email from ARRL and save attached .tq6 file in lotw directory.
Go to https://pk1.arrl.org/lotwuser/default and type in the password
included in

the text of the email. Click on "Your Account" then "Change Password"
and change the password to something you can remember. Delete the ARRL
email,
delete <your call>.tq5, and throw away the postcard.

11. Start/Programs/TQSLcert. Menu: File/Load Certificate File. Check
TQSL. Open
My Documents/lotw/<your call>.tq6. Exit program.

12. Start/Programs/TQSL. Menu: Station/Add Location. Wizard starts. Fill
in info
on your current QTH. (You can do other QTH's later).

Each time you want to submit logs to LOTW (< 10 minutes, mostly waiting
time):

A. Export ADIF or Cabrillo file from logging program to My
Documents/lotw/<filename>.adi
B. Start/Programs/TQSL/File/SignExistingADIFOrCabrilloFile.
Open My Documents/lotw/<filename>.adi. Save to My
Documents/lotw/<filename>.tq8
C. Email <filename>.tq8 to lotw-logs@....

Wait about 4 hours for email from ARRL saying your log was received.
Then go to https://pk1.arrl.org/lotwuser/default and click on
"Your QSO's" to see how many QSLs you got.

2871. received today: J6DX

Yahoo group: ARRL-LOTW (2003 — 2007)

From: FireBrick
Topic: 2871 Message: 2871

Less that 12 hours ago I posted that I got my J68AS qsl via LoTW.
Just now I received the J6DX LoTW qsl.
I'm sure they were the same fellow, J6DX was the contest callsign.
I'm pretty sure it was the same manager, N9AG.
Thank you Scott and the contest ops for a total of 3 new band/mode qsls.

J6DX via LoTW for a 40 meter WPX SSB contest qso.

Kids are wonderful, but I like mine barbecued.

I have been searching for several days and tried many different things and still am missing something. In the 12 easy steps I do not seem to have my tq6 file I have the p12 file and what I believe is the tq5 file it is now in the tsqcert folder but it is enclosed by the universal stop sign, normal? What did I miss in getting the tq6 file? Please help me get this wonderful idea of a programn going.Putting up the 12 easy steps was a great Idea I just ahve to get everything where it is supposed to be to get myself up and running.

A p12 file is a certificate back-up. It should have the information
from both your private key and the certificate.

Simply open tQSL Cert, select File, make sure that P12 is selected,
and click "Next." When the file dialog opens, select the P12 file
and click "open." If the P12 (backup) is valid you will see a
certificate listed without the (/).

Just tried that and also deleted the {/} tq6 file and it still came back with the{/} on it the, p12 file is from the safety back up I made So I see no reason for it not to be valid.

It's very likely that the p12 file you're trying to restore has
expired. After importing it into LoTW, right click on the slashed icon
and pick "Properties". That will tell you when the certificate stored
in that p12 file is good.
It's common for people to renew their certificates and not make a new
backup. When the certificate in the backup expires, they're toast.
Have a look at the LoTW home page - if you remember your postcard
password, there's a way to get a new certificate without starting from
zero.

2880. LOTW Certificate Confusion

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-04-02 19:08:54 UTC
From: scottpa1960
Topic: 2880 Message: 2880

I am transferring all my hamshack info onto a new computer. One of the things I need to do is get LOTW back up and functional so I created several .tq5 files today. I had KA3LUW (83-92), WY3X (92-03), KN3A (03-06), and back to WY3X (1-10-06). Since there were two WY3X's, I am wondering if this will create any problems with the ARRL? I submitted via email and tried to explain the reason I u/l two WY3X.tq5. I just don't want one of them deleted because they think its a dupe email.

Did I do this correctly, or could I have somehow taken the certificates off the old computer?

73--Scott
WY3X

You can import them from the backup .p12 file you created and stored
for safekeeping.

It is VERY important to save all your current certificates on a floppy
(or thumb drive) and store them off of your computer; that .p12 save is
the ONLY way your private keys can be recovered. It's very easy to move
them to a new computer if you've got the .p12, impossible otherwise.
(Well, there's some hackery you can do with hidden files, but that
doesn't count.)

Download and reinstall tqsl, then import the .p12 file (assuming that's
what you have).
You'll need to recreate your station location if you're using TQSL to
enter logs.

Carl,

You might want to check how the log is going in.
Correct mode etc. While matchups do run a low
percentage that few seems mighty low.

Try going to: http://www.hb9bza.net/lotw/lotw-dx.html
and check for some of your calls.

2888. LOTW WAS Awards

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-04-04 11:53:32 UTC
From: scottpa1960
Topic: 2888 Message: 2888

Just to let everyone know, it only took about a week from the time I submitted my LOTW WAS mixed and WAS RTTY awards. Not a bad turnaround time at all.

On the RTTY award, it has #430 - does this mean that only 429 people have ever submitted for this award before me?

Someone had made a comment about W1AW not having their logs uploaded. Looks
like they're doing something about it, as in LOTW I got 3 W1AW QSLs today,
from contacts in 1999 and 2000. I've got another back in 1975, in my novice
days. I wonder if they'll end up going back and entering QSOs from back then
and before.

2891. question about WAS award accounts

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-04-08 16:12:22 UTC
From: FireBrick
Topic: 2891 Message: 2891

I think I understand this but just to make sure.
I presently have a WAS award account for W9OL
Even though my previous WN9VOL & WA9VOL where from the same location as my present call, each would be a SEPARATE award account.

There is no issue of 'linking' as in the DXCC award where previous stateside callsigns can be combined.

Am I stating this correctly? States worked with previous callsigns can not be combined into one WAS award account.

If you take an Oriental person and spin him around several times, does he become disoriented?

I don't think that's true.

My understanding is that you can feed a single WAS with multiple callsigns, so long as the station locations were within a certain distance (50-miles?).

I've only been wrong once in my life. That was the time I thought I was wrong, but I wasn't. :-)

2894. More LoTW DX

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-04-16 00:07:54 UTC
From: Bill Coleman
Topic: 2894 Message: 2894

Today I did my monthly upload of my casual QSOs. Just 16 in March.
Delighted to find two confirmations:

YV1DIG 160m CW
ZL4PW 30m CW

The ZL4PW contact was interesting. Tuned across 30m one night after
0400z. At this time, there's usually little activity on the band --
it generally closes down completely around 0200z. Heard ZL4PW calling
CQ about 569. Worked him easily.

Hi LoTW user,

the loaded QSOs can be checked by the command "Your QSOs",
displaying max. 25 QSOs a page, but I would like to download
all my QSOs in LoTW.
Is there any possibility to do this?

When on the "Your QSOs" page, there's a menu on the left hand side of the screen with the heading "QSOs Menu". Click on "Download Report" and it'll allow you to select by date and callsign, then download everything that matches. It'll be in ADIF format.

That only gets you records with matching QSLs, not everything.

All the information is in there, there just seems to be no way to get
it out. Future enhancement?

Using the "QSOs Menu", "Download Report" gets you all QSOs, not just
those with QSLs (unless you restrict the download to just those with QSLs).

>All the information is in there, there just seems to be no way to get
>it out. Future enhancement?

Try the above. If that's not working for you, you can try my query page
at http://www.rickmurphy.net/lotwquery.htm - plug in your LoTW username
and password, hit submit, and you'll get a ADIF file with all of your
QSO records. But that's no different from what the "Download Report"
operation on LoTW does.

2899. Searching LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-04-16 14:24:25 UTC
From: Frank Davis
Topic: 2899 Message: 2899

I was recently able to download all my 160M QSL's only from LoTW by using this search string in the browser bar after I had logged on. You can change bands by inserting the band name as shown.

https://www.arrl.org/lotwuser/lotwreport.adi?qso_query=yes&qso_qsl=yes&qso_band=160M&qso_owncall=<callsign>

I was also able to download all the RTTY only QSL's for all bands by taking out the band paramter and insertng qso_mode=RTTY:

https://www.arrl.org/lotwuser/lotwreport.adi?qso_query=yes&qso_qsl=yes&qso_mode=RTTY&qso_owncall=<callsign>

From: Bob Daniels
Topic: 2899 Message: 2900

Try this: I'm doing this from memory. I have the original text for this on another computer. But you can get an adi file for all QSO's not just QSL's. If this isn't correct I'll try again Monday from my computer at work.

I got this originally off this list. I don't remember who to give the credit too, but I was able to re-create my entire log with this download, not just the QSL's.

https://www.arrl.org/lotwuser/lotwreport.adi?qso_query=1&login=CALLSIGN&password=PASSWORD&qso_qsl=no&qso_detail=yes&qso_withown=yes

From: Joe Subich, W4TV
Topic: 2895 Message: 2901

Use the following - insert your own account ID and password:

https://www.arrl.org/lotwuser/lotwreport.adi?login=<yourcall>&password=<your_password>&qso_query=1&qso_withown=yes&qso_detail=yes&qso_qsl=no&qso_qsorxsince=1900-01-01

It should provide you an ADIF formatted file of every record you have
uploaded. Details on creating these queries is available at:
http://www.arrl.org/lotw/developer/adifout.html

If you guys who post these long URLs would have the courtesy to
enclose them in < > signs, as in

<https://www.arrl.org/lotwuser/lotwreport.adi?
qso_query=yes&qso_qsl=yes&qso_band=160M&qso_owncall=<callsign>>

and

<https://www.arrl.org/lotwuser/lotwreport.adi?
login=<yourcall>&password=<your_password>&qso_query=1&qso_withown=yes&qs
o_detail=yes&qso_qsl=no&qso_qsorxsince=1900-01-01>

most modern mail clients will keep them together as links and not
force the rest of us to cut & paste them back together in order to be
able to use them.

Thanks for your help.

Or, don't do all that typing. Log in to LoTW and then use
https://www.arrl.org/lotwuser/lotwreport.adi to download all of your QSOs.
(If you don't want to log in first, add
?login=yourcall&password=yourpassword to the end.)

For more complex queries, use the query page I created at
http://www.rickmurphy.net/lotwquery.htm - it'll let you query
everything, date filter, callsign filter, etc. It was built using the
details documented in that developer documentation. (And no, it doesn't
send your LoTW password to me).

Yes, I'm wrong - it's only getting QSLs.
Apologies to those I questioned on this.

The capability is clearly there but there's no way to get a download of
everything (unless you build your own query, which is what my page does.)

>But your query page is excellent - thank you.
>
>Bryan, ZL1NI

It's pretty simple but I use it a lot to refresh my log, so I decided
to make it available.
I'm glad if folks find it useful.

Did you create the .p12 files for each of your callsigns?
They need to be created and transfered also.

I can't remember the exact sequence of doing so as I'm at a different computer but the instructions are on the LoTW site, I think in the FAQ's???

From: Bob Daniels
Topic: 2899 Message: 2909

I knew I shouldn't try to do that long URL from memory. I got it wrong in my first post.

It should be:

<https://www.arrl.org/lotwuser/lotwreport.adi?login=CALLSIGN&password=PASSWORD&qso_query=1&qso_owncall=CALLSIGN&qso_detail=yes&qso_qsl=no&qso_qsorxsince=1900-01-01&qso_withown=yes>

Replace each CALLSIGN with your current Call
Replace Password with your current password.

I used this once to sucessfully recreate my entire log.

Bob,

That URL works if you have only one call in your LotW account.
For those of us who have changed calls over the years, (e.g.,
AD8I -> W8IK -> K4IK -> W4TV) the "qso_owncall" statement must
be eliminated to get the entire file.

The downloaded file will contain the ADIF fields "App_LotW_owncall"
and "Station_callsign" which will identify the call used to make
the QSO.

2912. Backup/Restore

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-04-17 20:34:34 UTC
From: Mike Mellinger WA0SXV
Topic: 2899 Message: 2912

All of these discussions of saving .p12 files and the various difficulties involving in moving to new machines make me wonder why the TQSL group just doesn't add a backup/restore utility to the program which would save the certifications and the location settings. This would solve both backup issues and migration issues. It seems a mjaor user friendliness issue.

Mike WA0SXV

Great idea ... especially when you have an unexpected hard drive failure before getting a chance to save things! I know ... since it happened to me a couple weeks ago, and lost all my .p12 files and my renewal certificates that were waiting to be installed!

Hoping to salvage things and install on this new computer.

Ron

2914. Again Download QSOs

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-04-19 13:22:28 UTC
From: dk1bx
Topic: 2914 Message: 2914

I can download now all my QSOs stored in LoTW
by Joe Subich's link "https://www.arrl......" with the long
parameter list or by Rick Murphy's Query Page (see
messages before).

Everything is ok in the provided ADIF-File concerning
CALL, BAND, MODE, QSO_DATE, TIME_ON but what means
<QSL_RCVD:1>Y/N?

"<QSL_RCVD:1>Y" does not meet the confirmed QSOs (=QSLs)
in LoTW, but the number of all "<QSO_RCVD:1>Y" lines in
the ADIF file is exactly the number of my QSLs in LoTW.

Is there a program error in LoTW on downloading?

2915. How to correct station location?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-04-23 01:20:48 UTC
From: Joseph Lutz
Topic: 2915 Message: 2915

Hi,

Okay - seeing that taxes are done - ouch! - I have to put
my mind to work at something more productive. I want to
go back to the start of my downloads ['77] - have earlier
ones, but need to know how to do these first.
I have [4] different locations for W7LPF currently logged
and I want to correct the actual location, grid and county
information - and zone if necessary. Do I have to apply
for a separate TQL Cert for each location? Remembering
that in some instances I upload 2 sets of logs [especially
for contests, etc - I.E., W7LPF & W7LPF/3 or /4]. Or is
there an easier way to go about making the change?
Or should I just let them be? Then again, there may be
someone that still needs Fauquier or Orange Cnty Va

One certificate for each callsign.
if it's a w9ol, w9ol/9, wa9vol/4
whatever each individual call needs it's own cert.
Which is easy to apply for, using you original/current certificate.
The process is on the faq's

If you were signing w7lpf/7, he probably logged it that way and will only match if you submit your log the way you sent it, and he logged it.

separate your logs.
In my case
wn9vol date from > date to
wa9vol date from > date to
create a .adi file of each separate logged callsign
Sign that log, making sure you have the proper date range to match the certificate and enter the proper info into the station location, grid, zones etc.
That's done in the TQSL module that you sign your logs with.

You do that for each callsign for each location.
If w9ol has logs in IL, and then he moves to WI, the date range should coincide with the location of it's operation.
Otherwise your qsl recipients will get credit for the wrong state.

This sounds complicated....but actually after you do it once..it's really a snap.
my suggestion is to do it systematically
start forward or backward (my suggestion) as newer qso's are more likely to match than older ones.

If I could do it...an ingenious, steadfast, person like yourself will find it a snap!

Thanks Bill!!

I have already 'signed' for a W7LPF, W7LPF/4 & W7LPF/3 -
but did it when LOTW first started and really didn't think it through
correctly, as for instance I operated W7LPF/4 from both Fauquier
County and Orange County while in VA - I guess what I really am
asking is:

I can go into my one /4 and correct that info with no problem,
and resubmit the .adif file for that period. Will I be able to apply
for another /4 of course with different time frame and location?

I know I got a lot of 'hits' with /4 and /3 - but I know that a lot of
people would probably like the correct County/etc on the 'match'.

Joe

Just separate the counties.
Say....jan 1 2006 to feb 28 2006 you were in Fauquier.
sign those separate with that county info and upload.
Mar 1 to March 30 you were in Orange
sign those separate with that county and upload

to put it another way, separate your logs that have different info such as county, zone etc.

each time you go to upload, edit the station location to reflect the different data. Remember..TQSL remembers the last data put into the station location, so you must edit the location BEFORE signing that segment of your logs.

guys who operate qso parties or mobile across the country must do that for each county/state even cq/itu zones.

no need to apply for 'another' cert.
if the /4 cert covers the entire time frame.

just separate the two counties into two .adi files.
sign each separately but edit the station location to reflect which county each .adi file was

then upload each separately.

All your /4 or /3 will return hits the way they are now...but some will not received credit for the correct county.

say you previously submitted all the /4 qsos with county A.
now you realize that half were in county B.
really all you have to do is resign with the edited station info, the qsos that were in county B and only re-upload those.
The previous ones will remain as originally submitted.

People who made qso's with you while in county B, will get a 'NEW' hit and that qsl will now reflect the corrected info.

lol an analogy....when politicians take their money to the bank.
they have the 100's in a pile, the 50's in a pile, 10's etc. etc.
the banker counts each pile separate. <wink>

tQSL will allow you to create multiple "Station Location" entries
for each certificate (call). In the tQSL application, select
"Station" then add a location which for each county.

Export the log records for the first county to an adif file -
when you start tQSL to "sign" that file, it will show a box with
all certificates/locations select the correct one, sign and upload.
Then, repeat the process for each "batch" ...

73,

... Joe, W4TV

Try this page. It worked for me. Thanks to Rick/K1MU

For more complex queries, use the query page I created at
http://www.rickmurphy.net/lotwquery.htm - it'll let you query
everything, date filter, callsign filter, etc. It was built using
the
details documented in that developer documentation. (And no, it
doesn't
send your LoTW password to me).

Robert,

There is no official list of LoTW users. However, for over a year, HB9BZA and I have been keeping a list of users that we glean from our own and other user's lotwreport.adi files that can be downloaded from LoTW. Typically we find from 10 to even a hundred or more new user's callsigns per week. We have quite a few DXer's and contesters that send us those LoTW QSL report files. The current list, as of yesterday, includes 12,118 callsigns, representing 293 countries, that have uploaded part or all of their QSOs to LoTW. The list is available from hb9bza.com or my website -- http://www.bbcyber.com .

My website also has an on-line searchable list that will return callsigns of users when searched by callign, prefix, or country.

In addition, if you want to look at spots that are easily identified as LoTW users, look at DXLabs SpotCollector. I use that all the time to see if the people that are being spotted or those that I hear on the bands are LoTW users. I maintain the lotw.mdb database file for DXLabs, the latest list and/or database file is also available from my website. Given the choice, I'll work the LoTW users first because the QSL is pretty much a certainty.

This is a free service we provide.

Good Luck and 73s,

Bill, N5RR

From: K0HB
Topic: 2915 Message: 2928

There's something farkled in your algorithm. Your database shows my
previous call, KG6AQI, as a mainland call. The current holder is in fact
in California, but all the KG6AQI logs on LoTW are from Guam.

73, de Hans, K0HB
ex-KG6AQI

Subject: [ARRL-LOTW] Re: My Contacts

Robert,

There is no official list of LoTW users. However, for over a year, HB9BZA and I have been keeping a list of users that we glean from our own and other user's lotwreport.adi files that can be downloaded from LoTW. Typically we find from 10 to even a hundred or more new user's callsigns per week. We have quite a few DXer's and contesters that send us those LoTW QSL report files. The current list, as of yesterday, includes 12,118 callsigns, representing 293 countries, that have uploaded part or all of their QSOs to LoTW. The list is available from hb9bza.com or my website -- http://www.bbcyber.com .

My website also has an on-line searchable list that will return callsigns of users when searched by callign, prefix, or country.

In addition, if you want to look at spots that are easily identified as LoTW users, look at DXLabs SpotCollector. I use that all the time to see if the people that are being spotted or those that I hear on the bands are LoTW users. I maintain the lotw.mdb database file for DXLabs, the latest list and/or database file is also available from my website. Given the choice, I'll work the LoTW users first because the QSL is pretty much a certainty.

This is a free service we provide.

Good Luck and 73s,

Bill, N5RR

2930. Re: My Contacts

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-05-04 19:15:13 UTC
From: Bill
Topic: 2915 Message: 2930

Sorry Hans, but there is not enough time in my day to review every possible variation of location where a call could have been. When I hear from those such as yourself that have found errors in the list like country or zone, I try to correct it in the next list. This list isn't supposed to be the last word in dx station location, but only to identify a callsign that is using or has used LoTW. I put your ex callsign in my converter program so that it will show correctly in the next list.

Thanks for the update,

73s,

Bill, N5RR

No need to delete the incorrect QSO (and I don't think you can) because it will never be a "match" with any other. Just submit the correct info as a new QSO.

I tried to post that little fun factoid but just replying to the email notification doesn't seem
to work here like it does in other Yahoo!Groups.

There are only 12,489 registered users on the system. Hell, there are 675,274 hames in the US alone! I am on a mission the get at least a few more of the 662,785 signed up.

The real challenge is to get countries like Japan on LoTW.

With 13 million hams (2X the US), they have less than 500 LoTW users.

Eric,

Not all LoTW users are US. You have more work to do than the 662,785 you quote.

Based on earlier total users of 12,208, only 7,100 where US. 5,108 where the rest of us!

Hiya Art;

I doubt if withholding my precious 6 call QSL will muster much clout. Anybody who sends me a card, gets a card.

Hi Gerry;

Hence the use of the word "alone." To wit:

>> there are 675,274 hames in
>> the US alone!

Note the creative spelling of the word "Hames"

Call me old fashioned (I've only been licensed since 1962), but if someone sends me a card then they get a card. My logs ARE on LoTW but I far prefer a real card everytime, and I'll NEVER deny someone a card because theirs came by some non-preferred method.

What I want is everyone requesting LoTW confirmation would get it.

K> I'll NEVER deny someone a card because theirs came by some

This is not about confirmation methods, this is about unwillingness of
some to make efforts and give something desired to those looking for
it.

From: FireBrick
Topic: 2949 Message: 2949

I print a line on the bottom of all the qsl cards of stations I manage.
"All logs uploaded to LoTW for your convenience".

But, I still return a card for every request.

and my personal qsls.
I return every bureau cards request via bureau.
I return every direct card request, directly.
(even though I never figure out why someone want another rare Illinois Cook County card)
:-))

I prefer to promote LoTW by using a prepared rtty, cw buffer suggesting participation,
sent as a '73, thank you' message when ending a qso.

It's what my Elmer taught me, it's what I suggest to new hams now.en

Better than LA County, California! You should hear the
disappointment in the voices of the station when they get that bit of
news.\

My policy is to return all QSLs & SWLs direct 100%. Cost me about a
dozen stamps in two years.

I'll return an eQSL, but I'm not really into that.

Good idea to add an "advertisement" for LotW on the bottom of my
cards. I'm gonna do that from now on. Get it printed with the next
batch.

Good idea Bill.

I promote LoTW on my QRZ listing as my preferred method but if someone sends me a real card I return a card.

I have noticed a couple of things lately.

Firstly some must upload the contact almost daily. I upload once a month and have had some people get a little jumpy about the delay. So I have a message explaining my upload policy too.

Secondly I have noticed some times when people spot me on DX clusters they add the coment that I support LoTW. I think this is great advertising and I think the pileups gets bigger, which hopefully means more DXers are taking it on board.

Most logging software now supports LoTW in various ways and I believe some tell you that the station is a LoTW user too. I would be interested how it acheives this.

I think the single biggest thing that is holding up LoTW is the slowness in implementing support for more awards, hopefully this will come right in time.

I have noticed a couple of things lately.

Firstly some must upload the contact almost daily. I upload once a
month and have had some people get a little jumpy about the delay.
So I have a message explaining my upload policy too.

>>>The ability to instantly confirm QSOs would be a significant
incentive for LotW adoption. While this is technically feasible, my
impression is that large numbers of single-QSO transactions would
sink LotW's servers.

Secondly I have noticed some times when people spot me on DX
clusters they add the coment that I support LoTW. I think this is
great advertising and I think the pileups gets bigger, which
hopefully means more DXers are taking it on board.

Most logging software now supports LoTW in various ways and I
believe some tell you that the station is a LoTW user too. I would
be interested how it acheives this.

>>>This is accomplished by referencing a database assembled by
HB9BZA and N5RR from ADIF files contributed by LotW users -- not
from data provided by the ARRL. In effect, its a "known LotW users"
database. See http://www.hb9bza.net/lotw/ for additional information.

I think the single biggest thing that is holding up LoTW is the
slowness in implementing support for more awards, hopefully this
will come right in time.

>>>There are many opportunities to increase LotW adoption:
translation into languages other than English, streamlined signup
procedures for hams outside North America, a simplified renewal
process, expanded award support, and programmatic access to DXCC
credit slip data so that logging applications can be kept "in sync".
The impediment to all of these is the ARRL's meager funding of LotW
development and operations.

DXLABs DXKeeper does this and it uses a data base that contains known users collected in various ways. I do not know the details of that but it is really neat. When you use Spot Collector it has a yellow background for these stations.

Gerry,

You can get ARRL logos from this page but I do not see an LoTW logo
there yet:

<http://www.arrl.org/logos/>

The ARRL has not released their logos to the public domain. However
they only have some minor requirements about the use of their logos as you
can see below (from the above site):

> ARRL members and Affiliated clubs may use the ARRL diamond logo on their
> own personal QSL cards, stationery, club signs, business cards and web pages.
>
>ARRL Life Members may use the Life Member logo on their own personal QSL
>cards, stationery, business cards and web pages.
>
>Special Service Clubs may use the Special Service Club logo on their
>stationery, club signs and web pages.
>
>ARES members may use the ARES logo on their on their own personal QSL
>cards, stationery, business cards and web pages.
>
>National Traffic System members may use the NTS logo on their own personal
>QSL cards, stationery, business cards and web pages.
>
>Please be sure to use the logos in good taste.
>
>Please contact the ARRL for any other use of these logos.

Just because you "can" copy an image from a web site does not give
you permission to use that image.

Hopefully someone at ARRL reads this reflector and will see to it
that the LoTW logo is added to their logo page.

The ARRL page I copied the logo from does not have a copyright notice (as required by copyright law).

There are many non ARRL pages on the WEB that display the LoTW logo.

I am an ARRL member.

Given ARRL wants to promote non member use of LoTW, I would expect they would promote the use of the logo.

IANAL, but I'm pretty sure you're running off of old information. A copyright
notice *used* to be require, but is no longer. Copyright is automatic upon
creation and if you're not sure, you're better off assuming something *is*
copyrighted.

Which is too bad as swiping the one that is on the web page isn't hi rez enough for quality print applications.

And they should open this one up to non-members. I don't see the downside. (do u copy ARRL?)

BTW; great idea to add a blurb on one's QRZ bio, John ZL1BYZ. I did it today.

Hi,

Actually that does not make it PD... Legally, the ARRL had to state someplace, (and they probably have), that the Logo can be used by others.

Thanks,
Dave

Subject: Re: [ARRL-LOTW] LoTW only???

The ARRL page I copied the logo from does not have a copyright notice (as
required by copyright law).

There are many non ARRL pages on the WEB that display the LoTW logo.

I am an ARRL member.

Given ARRL wants to promote non member use of LoTW, I would expect they
would promote the use of the logo.

Gerry,

You can get ARRL logos from this page but I do not see an LoTW logo
there yet:

<http://www.arrl.org/logos/>

The ARRL has not released their logos to the public domain.
However they only have some minor requirements about the use of their logos
as you can see below (from the above site):

ARRL members and Affiliated clubs may use the ARRL diamond logo on
their own personal QSL cards, stationery, club signs, business cards and web
pages.

ARRL Life Members may use the Life Member logo on their own personal
QSL cards, stationery, business cards and web pages.

Special Service Clubs may use the Special Service Club logo on their
stationery, club signs and web pages.

ARES members may use the ARES logo on their on their own personal QSL
cards, stationery, business cards and web pages.

National Traffic System members may use the NTS logo on their own
personal QSL cards, stationery, business cards and web pages.

Please be sure to use the logos in good taste.

Please contact the ARRL for any other use of these logos.

Just because you "can" copy an image from a web site does not give
you permission to use that image.

Hopefully someone at ARRL reads this reflector and will see to it
that the LoTW logo is added to their logo page.

>
>Your quoting US copyright law.

Um, no. (Why are we discussing this here?) The old US law required copyright marking to claim that a work was subject to copyright, and required registration of the copyrighted work. The current international law does not require marking and grants copyright to works as soon as they are fixed in tangible media.

The Berne Convention defines international copyright law. Article 5(2) of that convention says that copyright is automatically granted upon creation of the work. In fact, this international agreement forbids use of marks such as (c) before copyright protection is granted.

If you download an image from a random website, you are violating the copyright of that site. If ARRL wants to make the image public domain, they'll have to explicitly state that. In reality, it's very unlikely that the League would have a problem with this sort of use.
(IANAL, so I won't commment on whether or not this constitutes fair use.)

From: Gerry Hohn
Topic: 2975 Message: 2975

I've had some communications with Wayne Mills at ARRL and he suggests that:

- The LoTW logo is Trademarked and is OK for use for non-commercial purposes without licence.
- He further suggests that where the logo is used for personal use, it should indicate the user of the logo is a supporter of LoTW.

I had a similar problem earlier and asked ARRL about this on email. N7ND at ARRL replied saying that there is no way users can delete records at the moment. He however said that it is OK if you uploaded the correct data again, as you have done. Only that QSO will match with a QSO upload by 2E0YSF, and create a QSL within the LoTW system.

This is much better than eQSL.cc where I had a problem when I uploaded my logs. The wrong log of another callsign got in with my call. And people who saw that entry actually created fake QSO records and uploaded it to get my eQSL confirmation. Every QSO you upload on eQSL can be seen by the other person. In LoTW, the QSL is created only when both sides upload their logs. So, a wrong QSO will not generally create a QSL. On eQSL these days, I only confirm eQSLs manually, i do not upload logs anymore.

I had this problem after certificate renewal where I hadn't deleted my
old certificate; uploading new logs did nothing. No errors were returned.
I found out the problem by sending the log via e-mail; the response
that came back told me that the cert being used was no longer valid.
Perhaps you can try uploading a log to lotw-logs@...?

Uploaded some more logs to LoTW for YO3APJ.

I've gotten some requests to check and see if a call is in the log.

I'd like to remind people, especially with qsos from pre 2000, make sure you ask me to look up with the call you may have been using back then.

I know I've forgotten that when sending for a qsl request from an golden-oldie.

Checked my log and had one via LoTW with a QSL date of 2004-06-07.
QSO was for the ARRL 10M Contest in 2001.

Guess you must have loaded pre 2001 in this batch.
How far back do you have logs for YO3APJ ?

some logs are into the early 90's.
but not all are online yet as some were on paper, and others were on programs that didn't have an .adi output.
So Adrian and I are working to get those into the system also.

The LoTW Download Report automatically opens into WordPad. I cannot get it to download as a file. It becomes a WordPad
text file. This only happens when downloading from LoTW. All other downloads function properly by asking where to save
the file and the file name.

Please help.

Bud,

Strange. I just did a download and I get the standard download dialog (save-where-file name) and it's saved as lotwreport.adi.

Are you downloading from the Your QSOs page and the Download button?

Another though is that you might have your FOLDER OPTIONS set to open .adi file with WORDPAD.

Gerry is undoubtedly right. You've told Internet Explorer to open .ADI
files with notepad without asking. You can turn the prompting back on,
but it's a bit involved.

To fix this, double click the "My Computer" icon on your desktop.
Choose the "Tools/Folder Options" menu selection.
On the Folder Options window, click the "File Types" tab.
Scroll down until you see "ADI" under the "Extensions" column. Click on
that line to select it, and you should see "Opens With: Notepad" in the
details area.
Click on the "Advanced" button, then make sure the "Confirm open after
download" checkbox is selected.
Whew!

I have 49 States confirmed by LoTW. Missing is Alabama !!!
I checked my log and have worked 43 Alabama stations, 10 of
them on 6M.

I wonder if LoTW has made it's way that far South :-) !!!

Most of the guys have been complaining about the lack of WY
and MT using LoTW. I'd be willing to swap 1 Mt for 1 AL.
Oop's I forgot that isn't like swapping "Baseball Cards" !!!

Wish I had been home for the ALQP contest. Well next year.

2993. Re: CQ Alabama

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-06-05 13:55:56 UTC
From: Bill
Topic: 2989 Message: 2993

To all LotW users,

The last couple of messages address a situation which some of us contesters have been looking at for a weeks, that being an LotW contest. As many know, for the last year Robert, HB9BZA and myself have been continually updating a LotW user list, now at 12,397 callsigns and 293 countries represented and available at either http://www.hb9bza.com or http://www.bbcyber.com . This group of contesters and I have worked out a scheme for log submittals, downloads, download processing, and verification/scoring that would make a contest very easy. In a nutshell, the method is to allow all to participate, but only those that are actually signed up LotW users to participate in the actual contest for awards. The event would be run, at a "yet to be selected date". Since everyone could be in the contest and to give those interested time to sign up for LotW after the contest, there would be a wait period before final logs had to be uploaded to LotW. But obviously current LotW users could upload right away. After approximately a six week period, those entering the contest would would have two weeks to download an lotwreport.adi file and EMAIL that file to the contest committee. After the final date for lotwreport file submittal, log processing software processing of the entry would be done with respect to the following.
-- QSO is valid by the fact that there is a valid entry in the file and that the other station has also a matching QSO. If the other station does not join LotW then the QSO will never show up in the lotwreport.adi file. Both logs must be submitted to avoid cheating by submitting altered lotwreport.adi files. Also, if there is a QSL with a specific callsign identified in the lotwreport.adi file and over 5 other entries show a valid QSO then it would be assumed that the QSOs are actually valid and that the other LotW user just didn't submit enter the contest by submitting his lotwreport.adi file.
-- QSO occurred during the contest period and a QSL was generated before the end of the wait period.
-- QSO verification by LotW prior to the cut-off date of log uploading to LotW. (This is needed so that one station could not receive an advantage by waiting until the very last minute and then having late LotW signups give him a valid QSO that an early log (file) submittal did not verify).
-- Standings would be automatically generated by the software as to Country, State, Band, Mode, points, multipliers, and score.
-- Scores would be submitted to a couple of the major DX/Contest related web sites, bbcyber.com website, and this forum for recognition.
-- Awards would be generated for country and state high scores.

There are some other issues to contend with yet, but no show stoppers for the first contest event to use an automatic form of QSO verification, multiplier determination, and score generation. The fallout from all of this is faster QSLs, quite a number of new LotW sign-ups would probably occur, and many would surely qualify for some of the current DXCC and WAS awards.

The process described above does not require ARRL support. But we would certainly yield on our plans to ARRL if they were to announce an LotW contest that was similar to this.

A contest such as this would certainly result in many new sign-ups for LotW and by spacing it out, the load on LotW should be minimized.

Any direct comments would be appreciated within this forum or by direct EMAIL.

2994. Re: [ARRL-LOTW] Re: CQ Alabama

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-06-05 14:31:33 UTC
From: Vladimir V. Sidorov
Topic: 2989 Message: 2994

Gents,

It looks too complicated to be attractive. There is another solution, a quick, easy and (potentially) effective one, being just "LotW Activity Days". Let's say, it's a weekend.
No rules, no sponsors, no scores, no awards. Actually some rules are needed:
- time frame
- an (LoTW valueable) exchange: a signal report plus Name, QTH (state, province, etc, where applicable) and Grid Loc
- when finished, participants upload the contacts made during the Activity Days to the LoTW.

That's it!

And everybody is a winner, because every single contact made potentially improves your score towards an award.

The only input needed would be a little bit of ad of the event. I keep my mouth shut on who'd best of all take care of the ad...

73,

2995. Re: CQ Alabama

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-06-05 15:12:37 UTC
From: Bill
Topic: 2989 Message: 2995

This event could also be run over an extended time period, but from past experience it needs to be made into a timed contest to generate the flurry of activity and desired results of the objectives noted below.

Actually entry is not complicated at all and simpler than for other contests since the participant doesn't even have to worry about points, multipliers, or submit a score, all those would be automatically generated. Process would be:

1) upload your log file as either Cabrillo or ADI format;
2) wait a pre-determined time and then download an lotwreport.adi file; and
3) email a copy of the report to the contest.

Contesters work on incentives -- the recognition of high scores would generate many new LotW members

There a two main objectives for a contest besides the actual contest itself which are:

1. Get more of the contesters to upload their logs to LotW which would give QSLs for their country/state/grid square to those they will work and also to those they have worked in the past.

2. Get more world-wide amateurs to take the time to join LotW.

Subject: [ARRL-LOTW] Re: CQ Alabama

To all LotW users,

The last couple of messages address a situation which some of us contesters have been looking at for a weeks, that being an LotW contest. As many know, for the last year Robert, HB9BZA and myself have been continually updating a LotW user list, now at 12,397 callsigns and 293 countries represented and available at either http://www.hb9bza.com or http://www.bbcyber.com . This group of contesters and I have worked out a scheme for log submittals, downloads, download processing, and verification/scoring that would make a contest very easy. In a nutshell, the method is to allow all to participate, but only those that are actually signed up LotW users to participate in the actual contest for awards. The event would be run, at a "yet to be selected date". Since everyone could be in the contest and to give those interested time to sign up for LotW after the contest, there would be a wait period before final logs had to be uploaded to LotW. But obviously current LotW users could upload right away. After approximately a six week period, those entering the contest would would have two weeks to download an lotwreport.adi file and EMAIL that file to the contest committee. After the final date for lotwreport file submittal, log processing software processing of the entry would be done with respect to the following.
-- QSO is valid by the fact that there is a valid entry in the file and that the other station has also a matching QSO. If the other station does not join LotW then the QSO will never show up in the lotwreport.adi file. Both logs must be submitted to avoid cheating by submitting altered lotwreport.adi files. Also, if there is a QSL with a specific callsign identified in the lotwreport.adi file and over 5 other entries show a valid QSO then it would be assumed that the QSOs are actually valid and that the other LotW user just didn't submit enter the contest by submitting his lotwreport.adi file.
-- QSO occurred during the contest period and a QSL was generated before the end of the wait period.
-- QSO verification by LotW prior to the cut-off date of log uploading to LotW. (This is needed so that one station could not receive an advantage by waiting until the very last minute and then

having late LotW signups give him a valid QSO that an early log
(file) submittal did not verify).
-- Standings would be automatically generated by the software as to
Country, State, Band, Mode, points, multipliers, and score.
-- Scores would be submitted to a couple of the major DX/Contest
related web sites, bbcyber.com website, and this forum for
recognition.
-- Awards would be generated for country and state high scores.

There are some other issues to contend with yet, but no show
stoppers for the first contest event to use an automatic form of QSO
verification, multiplier determination, and score generation.
The fallout from all of this is faster QSLs, quite a number of new
LotW sign-ups would probably occur, and many would surely qualify
for some of the current DXCC and WAS awards.

The process described above does not require ARRL support. But we
would certainly yield on our plans to ARRL if they were to announce
an LotW contest that was similar to this.

A contest such as this would certainly result in many new sign-ups
for LotW and by spacing it out, the load on LotW should be minimized.

Any direct comments would be appreciated within this forum or by
direct EMAIL.

What a great idea! Would you run this concurrently with a Big contest, like possibly Sweepstakes? Since it doesn't relay on any form of exchange, it could "fit over" any and all contests. Kind of like another category ie "TB and wires" My apologies if I sound too excited here, but I have 16K+ Q's in LOTW and only 3300 confirmed. I would love to get that percentage up.

Keep it moving forward...

2999. I'm climbing the learning curve...

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-06-05 21:37:44 UTC
From: Robert Chudek - K0RC
Topic: 2999 Message: 2999

Last night I finished uploading 11 years of logbook data... 22,506 QSO's... whew... only 33 years to go!

This morning I discovered my computer clock's date/time was set wrong for the 1998 ARRL DX CW Contest. I have about 300 QSO's loaded into LoTW that I know are wrong. I am fixing the original dates/times and will create a new ADIF to upload.

How do I "bulk erase" all the bad QSO's currently in the system? You don't just leave them there, do you?

You don't, you can't.
Just upload the corrected qsos.
The 'wrong time' qsos will see in cyberspace, never to be seen again.

Eventually, the LoTW coders will develope a way to 'correct' qsos, but for now they advise to just forget about them....

In 100 years, they will fall into the bit bucket and be used as alternative fuel.

Bob,

I, too, have my climbing boots on, but I have seen very similar questions, and the answer seems to remain the same. You simply leave the "bad" QSO's as there will never be a match, and upload the "good" ones.

Wow.33 years? Good for you.

WOW! What a potential for wasted resources (disk space)! And to think the system will need to sift through all that "alternative fuel" every time a query is made. And they could have been using all that processing power for something useful... like SETI or something... :-)

Oh well... at least I made DXCC and WAS right out of the shoot... even without those bogus Q's!

Hopefully when you imported your information into TQSLcert you saved the certificate as a .p12 file. If you didn't do that, you don't have a backup.

A .tq6 file does not have your entire key pair and cannot be used to recover your private key.
Please see the info on the LoTW web site on how you can have a new certificate issued if you don't have a p12 file.

This can't be repeated often enough: You MUST MUST MUST MUST save your LoTW certificate to a file stored externally, preferably in multiple copies. You must do this as the private key portion of your key pair is not held on the LoTW servers; it's only on your computer. If you lose your hard drive, the public part of certificate stored on the LoTW system is now worthless.

You should periodically use TQSLCert to "File/Save" all of your certificates periodically. If you don't do this, your key pair can't be recovered. I used my .p12 backup last week to recover a corrupted certificate.

If you have the original postcard with your numbers on it, I think you can use that to get another copy of the certificate. From LotW web site:

Forget to renew your cert before it expired? Lose your cert in a crash? -- Don't feel alone. You can't renew an expired cert, but if you are in the U.S. and you have an old postcard password, you can quickly obtain a NEW certificate. Here's what to do.
First delete all .tq5 and .tq6 files that may still be in your machine. Also, make sure there are no certificate lines in TQSLCert with your callsign. Next, create ONE new certificate request and send it to kallison@... along with the old (eight-character) postcard password written in the TEXT of the same message. If you don't have a postcard password, you will need to send the request to the server (lotw-logs@... or upload at the Web site) and wait for a new postcard password.

Gentlemen,

The problem that we have with an "Activity Days" concept is that we believe that it would do very little to increase the number of new users and won't do anything to get the bulk of the contesters interested. Part of what we are trying to accomplish is to get the contesters interested so that they will first sign-up for LotW and second upload logs not only for this activity, but for previous contests. Once they see the amount of work that would be lifted off their shoulders for QSLs, we think that many would be convinced to continue the modest effort of uploading logs when they turn in their entries. With more contesters signed up and more QSLs generated, there would also be more of an incentive for non-contesters to join.

The non-contester would also benefit by being able to search the band looking for states and countries that they need and be assured that a QSL was forthcoming. Tools like SpotCollector (DXLabs), a free program makes it very easy to identify LotW users for those just wanting to casually participate.

As for WARC bands, the ARRL and most other organizations have agreed to not have contests or other major events use those bands because of the small size of the frequency allocations, shared use with other agencies, and the resulting direct effects on casual users.

At least for the first LotW event, the group is leaning toward piggy backing on a major contest and running it in parallel, using the same reports as given the major contest (the only data needed for an LotW confirmation is Call, time, date, mode, and band, which are present in every type of event). RS(T) and location (zones, countries, etc) are not required for a LotW QSL, but that type of information is usually attached to the QSL, including the grid square as long as the other operator has included the information when signing the log file.

The only thing then required for the contester to do is to join LotW, if not already a member, and send his Cabrillo file two places rather than one, raw Cabrillo file as the contest entry and a TQSL signed Cabrillo file to LotW.

One big advantage the above approach to getting started is that there would not be a ramp-up problem, which faces all new operating events. We have international websites now agreeing to advertise the event once we solve the setup and coordination problems and decide upon the dates and times of the first event.

Comments are invited.

Gentlemen,

The problem that we have with an "Activity Days" concept is that we believe that it would do very little to increase the number of new users and won't do anything to get the bulk of the contesters interested. Part of what we are trying to accomplish is to get the contesters interested so that they will first sign-up for LoTW and second upload logs not only for this activity, but for previous contests. Once they see the amount of work that would be lifted off their shoulders for QSLs, we think that many would be convinced to continue the modest effort of uploading logs when they turn in their entries. With more contesters signed up and more QSLs generated, there would also be more of an incentive for non-contesters to join.

>>>"Activity Days" is a sissy-boy wimp name for a contest... Make it something with guts, like "He-man Tool Time Trophy Challenge" or "Bet You Can't Win This One Contest". Go to the root of what drives a contester to sit in a chair for 48 hours straight. They're not sitting under a parasol sipping mimosas'.<<<

>>>LoTW is pass? to a contester (yeah I'm uploading my logs but I have a personal goal behind this). It doesn't generate QSL cards (I know, sorry to bring this up) so LoTW isn't going to significantly reduce the hard-copy QSL requests. Contesters are interested in contesting, not WAS or DXCC. Hell, the top competitors already achieve WAS and DXCC in a single weekend. Multiply this by the number of big contests in a year. There's no challenge.<<<

>>>You need to figure out a REAL incentive to get more participation. Here's a controversial idea... only accept all ARRL contest logs via LoTW. This suggestion will set the contesting reflectors on fire!<<<

The non-contester would also benefit by being able to search the band looking for states and countries that they need and be assured that a QSL was forthcoming. Tools like SpotCollector (DXLabs), a free program makes it very easy to identify LotW users for those just wanting to casually participate.

As for WARC bands, the ARRL and most other organizations have agreed to not have contests or other major events use those bands because of the small size of the frequency allocations, shared use with other agencies, and the resulting direct effects on casual users.

>>>I agreed, the WARC bands need to remain available for those who get crowded off the contest bands.<<<

At least for the first LotW event, the group is leaning toward piggy backing on a major contest and running it in parallel, using the same reports as given the major contest (the only data needed for an LotW confirmation is Call, time, date, mode, and band, which are present in every type of event). RS(T) and location (zones, countries, etc) are not required for a LotW QSL, but that type of information is usually attached to the QSL, including the grid square as long as the other operator has included the information when signing the log file.

>>>Well this idea falls along the lines of my previous suggestion regarding using LoTW as the official contest log, it stops short and adds another step. There are "real-time scores" websites that publish a contesters statistics in real time. You can look to see how you are faring compared to your competitor.<<<

>>>I see a time in the near future where contesters will log onto a contest website and the real time results of all competitors will be available as the weekend unfolds. Kinda like going to a horse race. Let the betting begin... :-) <<<

>>>tQSL needs to be updated to force the operator to input this information. Not many are going to go back and "fix" their existing QSO's to include the CQ, ITU, IOTA, County, etc.<<<

>>>LoTW would need to be programmed to accept ADIF "contest tags" in order to transport this information. But I'm afraid you are suggesting a change in the LoTW goals and objectives, which will take a lot of effort (and money) to include these features.<<<

The only thing then required for the contester to do is to join LotW, if not already a member, and send his Cabrillo file two places rather than one, raw Cabrillo file as the contest entry and a TQSL signed Cabrillo file to LotW.

>>>The first sentence is a whole 'nother issue outside the topic in this thread! "Reasons for low LoTW participation..."<<<

One big advantage the above approach to getting started is that there would not be a ramp-up problem, which faces all new operating events. We have international websites now agreeing to advertise the event once we solve the setup and coordination problems and decide upon the dates and times of the first event.

Comments are invited.

>>>Whatever the outcome, short and long term, if you guys get a contest put together I'll compete.<<<

3010. New Yahoo Message Format

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-06-07 03:33:15 UTC
From: Jerry Keller
Topic: 3010 Message: 3010

Hello, All.... some of you may have noticed a new format to your messages coming in from this YahooGroup, and perhaps other YahooGroups as well. If so, and if you don't like it, here's the way to "fix" it...

1. Go to the My Preferences page:

http://groups.yahoo.com/myprefs

If you are not signed in to your account, you will then be prompted to do so.

2. Click on the "Edit" link under "Options", located on the right side.

3. Under "Message Format", choose the option labeled, "Do not convert to HTML".

4. Click on the Save Changes button.

Please note that even if you ask to receive plain text, Yahoo! Groups does not convert messages from HTML to plain text. So if another group member sends a message that contains HTML code and your email software recognizes HTML code, you may see HTML formatting and graphics. If you wish to prevent this, please make sure that the members of the group know to only send messages in plain text with no HTML coding.

The above directions have "fixed" the situation for me, and I'm sure they will work for you as well if you follow them carefully.
73, Jerry K3BZ

Just to finish with a follow-up... I was on the phone today with Wayne Mills, N7NG/1 at ARRL regarding a certificate issue I was having, and he confirmed what you said.

You can't purge records from LoTW at this time.

Judging from my results, it is my impression that contesters are the most prevalent users of LoTW. Maybe this proposed effort is targeting the wrong audience.

Contesters are the most likely to have computerized/Cabrillo/ADIF logs, making it essentially painless to upload to LoTW. I doubt that a "contest-like" event would generate any appreciable amount of new LoTW participants.

Hello K0HB,

I totally agree. Another "doubt": how would LoTW users recognize each other in such "parallel" contest-like events?

Let's just make it our own "holiday", lets work some new ones in "Activity Days", including WARC bands, and "CQL" or just "LoTW" instead of "CQ" would let us easily recognize each other. If ARRL announced and advertised, I bet it would bring lots of interest for DX- and Challenge- chasers, and new LoTW users, finally. As for me, I still need to confirm many european countries on 17/30 m, and I bet many of them need UA9 as well, so that would be very useful for all of us.

From: Robert Chudek
Topic: 3015 Message: 3015

I like the summary grid I get regarding my standings for WAS. I am sitting at "48" or "49" in many categories. It sure would be nice if there was a second "needed" column on that matrix page!

How can I easily determine what "2" or "1" are missing in each category using LoTW?

73 de Bob - K0RC

When you're looking at the summary grid, click on one of the awards (or
categories) (e.g. click on 'Basic'). This will show you the pending credits
for the award you selected. Change the 'View' radio buttons to 'All
Entities', and click the 'Select WAS Award to View' button. Down below you'll
now have a list all of the states, with the ones you have LOTW credits for
filled in. The ones you don't have will be obvious by the lack of a call.
There's a drop-down to the left of the 'Select WAS Award to View' button that
will allow you to look at another award(band, etc) without having to go back
to the summary grid. Just change it and click on the 'Select WAS Award to
View' button again.

I print this out for the various bands I'm working on, and fill in by hand the
missing states I have cards for, so I know where I stand counting both LOTW
and cards.

There is another screen that is quite good for the needed states.

Go to your WAS account then click on Application. The next screen
will show all the missing States for each band, mode etc.

Quick & easy.

73 John ZL1BYZ.

Bill,

What callsign was he using when you worked him? It should be the
same as the callsign that the LoTW QSL is from. I just checked and
LoTW came back with "no logs found for VU5AN/VU3RYC".

The DXCC Challenge is a pretty recent innovation. You can find the rules here: <http://www.arrl.org/news/stories/2001/05/08/3/>

Basically, you get a challenge point for every band-country you confirm on the band 160m-6m, regardless of mode. You need to accumulate 1000 points to qualify for the award.

Since there are only 10 bands, you'll qualify for basic DXCC long before you'll qualify for the Challenge.

3031. LoTW "competition"

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-07-07 15:29:49 UTC
From: K0HB
Topic: 3031 Message: 3031

In the 2005 DXCC Yearbook just received, Editor N7NG proposes the notion of "competition based on Logbook of The World-only confirmations" with plaques and cups, etc.

In my opinion, this idea should not be tossed aside lightly. It should be hurled aside with energetic force.

LoTW is pure and simply a METHOD for confirming amateur radio contacts, not a competitive activity like contesting or DXing. It is an electronic part of our support infrastructure, just as the postal system supports the exchange of paper QSL's.

I love the convenience of LoTW, but morphing this METHOD of exchange of QSL's into a competition in-and-of-itself is not an appealing idea. Will we also open a competition based on other METHODS like "most cards via the bureau", "most cards via WF5E", "most cards via direct mail" (sub-categories based on number of green stamps enclosed), and several other QSL methodologies?

The competition rightly belongs in our on-the-air operating, not in the method(s) we employ to acquire the confirmations of that operation.

I disagree with Hans' view with energetic force.

A "competition based on Logbook of the World-only confirmations" does
not diminish the traditional means of exchanging QSLs for those who
whish to collect them. However, it provides an excellent vehicle
to enable certain "long form" contests (e.g., first to work and
confirm DXCC or WAS on a particular band each month, etc.). These
long form "competitions" and be considerably different than the
current crop of all out 24 or 48 "sprints." It enables a redefinition
and expansion of the traditional contest.

In addition, LotW based "contests" and awards are an excellent way
to promote participation in Logbook of the World. Promotion is
something LotW sorely needs and providing an operating reason to
encourage participation is one way to encourage that participation.

From: R Johnson
Topic: 3042 Message: 3042

Hi:
I've been sitting here with 49 states confirmed by LoTW.
All I needed was Alabama for LoTW WAS.

I know many of you needed ND,SD,or WY to complete WAS and were
wondering if news of LoTW had reached those states.

I had 44 Alabama QSO's, but nothing confirmed by LoTW,
and I was also starting to wonder if the news of LoTW had even
reached Alabama.

Well this weekend I worked the CQVHF Contest.
Within 19 minutes after the contest I had my .TQ8 file uploaded.

About 3 Hours later I had my first match from N9AKR (Thank you)

This morning when I checked LoTW Awards I found that K4XR had
uploaded his log from ALABAMA !!!
(TNX, I'm bowing down and flagellating :-) >:D< :-*!!!)

Oh Yeah, the WAMMIES:
1 - AL gave me WAS Basic and Phone.
2 - AL gave me a new LoTW State on 6M. (38, with 17 LoTW confirmed)

The 1/2 Whammy:
I worked AF6O giving me CA, a NEW State on 6M (FN42 to DM14) !!!
Unfortunately it appears that he is not a LoTW user yet.
One can only hope :-).

In the first 24 hours I have had about a 16% LoTW return rate for CQVHF !!!

Some of my contest return rates have been as high as 30% !!!

I might say that contesters seem to be more lightly to use LoTW than
the average Ham based on my LoTW returns. FD rates even lower !!!

VHF Contesters seem to have a higher return rate than HF Contesters.
My personal observation.

My overall LoTW return rate from LoTW is 16.34% since day one after Beta !!!

SOAPBOX ON:

Lastly, I must voice my usual complaint about the LoTW users who fail
to set up their "Station Data" to include their CQZ, ITUZ, and Grid.
like "Touch Holes", EVERYONE has one of those !!!
"U.S. Counties" and IOTA will vary by location.

All one has to do is Edit their "Station Data" and re-sign ALL of
their logs (create a new .TQ8 file or files) and resubmit to LoTW.
The new submission will supercede the old submissions !!!
This makes sure that EVERY QSO gets the FULL the credits that
LoTW provides for now and in the future !!!

DXCC isn't everything that LoTW can support !!!

SOAPBOX OFF:

LoTW works FB as far as it presently goes.

It works better when you supply all of your station info !!!

It would work even better if it supported "VUCC" !!!

N1NN:
Please take note, and thank for the 6M LoTW Contact !!! (Hint Hint).

We'll have to agree to disagree, Joe.

LoTW is not an operating event. It is just one of several methods to
confirm QSO's. If that method requires artificial resuscitation in the
form of "an operating reason to encourage participation", then it may not
be the best place for ARRL to spend our membership dollars.

LOTWers....

What is the problem with an LOTW "event"?...much like any
other "event"...

We all know the benefits of LOTW but it has not been generally
adopted by many...an event 'may' highlight what it is, how to use
it, and show off its inherent benefits.

I don't think any of us will disagree with the notion of more
participation...don't call it a contest...if that's what makes you
comfortable...but I welcome any 'event' which will increase general
participation...(along with an increase in my personal confirmed
percentages...)

Let's not haggle over terms....it is counterproductive...it is
better to light a candle then to complain about the darkness!...

Topic: 3031 Message: 3045

Hans,

Spending the membership dollars to promote LotW as a way to exchange QSLs is no different and no less supportable than all the "membership dollars" spent to encourage SSB when it was new, or packet when it was new, or FM/Repeaters when they were new, etc.

I know you would prefer a nice four color glossy card - and I would in some circumstances. However, when I look at four boxes of bureau cards totaling more than 50 pounds that accumulated while I was off the air (from contest operations in the 70's and 80's), LotW makes a lot of sense and anything that can be done to encourage the use of LotW for "routine" confirmations is justifiable.

Subject: [ARRL-LOTW] LoTW "competition"

In the 2005 DXCC Yearbook just received, Editor N7NG proposes the notion of "competition based on Logbook of The World-only confirmations" with plaques and cups, etc.

In my opinion, this idea should not be tossed aside lightly. It should be hurled aside with energetic force.

LoTW is pure and simply a METHOD for confirming amateur radio contacts, not a competitive activity like contesting or DXing. It is an electronic part of our support infrastructure, just as the postal system supports the exchange of paper QSL's.

I love the convenience of LoTW, but morphing this METHOD of exchange of QSL's into a competition in-and-of-itself is not an appealing idea. Will we also open a competition based on other METHODS like "most cards via the bureau", "most cards via WF5E", "most cards via direct mail" (sub-categories based on number of green stamps enclosed), and several other QSL methodologies?

The competition rightly belongs in our on-the-air operating, not in the method(s) we employ to acquire the confirmations of that operation.

From: Gerry Hohn
Topic: 3031 Message: 3048

I have to agree with Hans on this.

LoTW is simply a record of transactions.

To be a "competition" there should be some means of me effecting the results
rather than simply waiting and hoping the other stations contacted will
upload their logs.

As much as I support LoTW and encourage help and others to us it, I don't
see it as a "competition".

I agree, further if someone does not like a particular form of contest, they need not participate... Not having it because some don't want it is not a reason to not have a type of contest, or to eliminate it before it has even had a chance.

Put it up to the ultimate test... Have it, if it fails, (and it might), then it should die, if it works, (and it might), then it should have been done... Really quite simple...

Thanks,
Dave

I disagree with Hans' view with energetic force.

A "competition based on Logbook of the World-only confirmations" does not diminish the traditional means of exchanging QSLs for those who whish to collect them. However, it provides an excellent vehicle to enable certain "long form" contests (e.g., first to work and confirm DXCC or WAS on a particular band each month, etc.). These long form "competitions" and be considerably different than the current crop of all out 24 or 48 "sprints." It enables a redefinition and expansion of the traditional contest.

In addition, LotW based "contests" and awards are an excellent way to promote participation in Logbook of the World. Promotion is something LotW sorely needs and providing an operating reason to

encourage participation is one way to encourage that participation.

3050. RE: [ARRL-LOTW] LoTW "competition"

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-07-18 13:44:35 UTC
From: Dave Cole (NK7Z/NNN0RDO)
Topic: 3031 Message: 3050

Actually I believe the reason for the contest suggestions was as a way to promote LOTW, not for "resuscitation". The LOTW is working wonderfully for me, I have a huge rate of return, (mostly RTTY is why), and it is always getting better. I have on my web page, a request for LOTW confirms, and I also have the same request in my BRAG file.

IMHO the real slowdown issue with LOTW is the security ARRL has in place to get you started. A long setup time, and a long return time tend to reduce the numbers of folks that can use the service. Not sure how it could be done any better and make sure that no cheating is taking place, but some form of security is needed.

In the long run, we all will, (generalization I know), end up using some form of E-QSL, and the paper QSL will die, (again a generalization), but you get the picture. The sooner we embrace an electronic form of QSL the better it will be for all of us. Hence the suggestions for contesting to make folks aware, and to promote use, thus speeding up the process.

Thanks,
Dave

We'll have to agree to disagree, Joe.

LoTW is not an operating event. It is just one of several methods to confirm QSO's. If that method requires artificial resuscitation in the form of "an operating reason to encourage participation", then it may not be the best place for ARRL to spend our membership dollars.

Of course it IS different!

All of those things you mention were new on-the-air OPERATING technologies, and ARRL support (and membership dollars spent) falls nicely under our charter in the FCC rules.

"97.1(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art."

Clearly (in my opinion) the National Association for Amateur Radio would be remiss if it didn't encourage "when they were new" OPERATING technologies.

LoTW, on the other hand, is simply a METHOD of ACCOUNTING for our contacts, nothing more, nothing less. If it works and draws widespread participation (as it seems it is), then fine. If most hams could care less and do not participate, then so be it too.

>..... anything that can be done to encourage the use of
> LotW for "routine" confirmations is justifiable......

.....in your opinion. Not in mine.

I am a "from the start" participant (35,000 QSO's loaded) and supporter of the LoTW method of QSLing, not some luddite clutching my "Little Print Shop" samples (remember those, which came even before your Novice license got to you?).

But LoTW is simply a METHODOLOGY for confirming contacts, just like IRC's, SASE's, WF5E, managers, and the incoming/outgoing bureaus. Having some kind of "competition" to promote any of those METHODOLOGIES is (in my opinion) a "welfare program".

Gerry,

> To be a "competition" there should be some means of me
> effecting the results rather than simply waiting and hoping
> the other stations contacted will upload their logs.

I think those who might be the most serious about a LotW "competition" will be serious about seeking out LotW participants and encouraging QSO partners who are not currently using LotW to become registered and actively participate.

However, I don't see the proposed LotW activity as a competition in the sense of a contest like Sweepstakes, ARRL DX, etc. but more be more in line with some of CQ's year long operating activities or the eDXCC, eVUCC, or eWAS awards being awarded by eQSL. They are better characterized as "incentives" ...

The lack of resources committed to LotW (lack of promotion, limitations in programming support, etc.) by the Board has been stunning. The need for additional resources is critical and without promotion LotW will never thrive. While Hans claims that promoting LotW is different than promoting SSB, Repeaters of packet, LotW is another "modernization" of Amateur Radio - without which Amateur Radio will continue to decline.

3054. LOTW promotion

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-07-21 06:09:20 UTC
From: kb2de
Topic: 3054 Message: 3054

IMHO the way to get more people using LOTW is to have it encompass more awards (including those sponsered by other organizations)

The problem is that there is only one (or a few) programmer(s) at the ARRL working on this (in addition to other duties).

What we need are some hotshot programmers who could volunteer to help on various award modules and see what could happen. I noticed an increase in confirmations when WAS was started.

Many of the logging programs now have ways to upload to LOTW and slowly more people are going back and putting their old logs in. I have been getting qsls from contacts made in the 80s and 90s.

The time between application and postcard for the DX stations could probably be looked at too.

73, Peter

What would be nice is if they would rewrite it in Java so that everyone could use it on all OSes, and then modules would be portable between OSes too so that less total work would be required. I'd contribute if it was written in Java.

LotW runs exclusively on an ARRL server.

What would be the benefit of rewriting it for increased portability?

Hi,

Actually that may very well be the answer that works! Having other awards being available via a single source would without a doubt centralize folks. Good thought!

Thanks,
Dave

Subject: [ARRL-LOTW] LOTW promotion

IMHO the way to get more people using LOTW is to have it encompass more awards (including those sponsered by other organizations)

The problem is that there is only one (or a few) programmer(s) at the ARRL working on this (in addition to other duties).

What we need are some hotshot programmers who could volunteer to help on various award modules and see what could happen. I noticed an increase in confirmations when WAS was started.

Many of the logging programs now have ways to upload to LOTW and slowly more people are going back and putting their old logs in. I have been getting qsls from contacts made in the 80s and 90s.

The time between application and postcard for the DX stations could probably be looked at too.

73, Peter

I think he meant rewriting the client software, TQSL and TQSLCERT.
FWIW, the Macintosh version of TQSL has problems with the latest
version of OS X.

The user side library is already available in C ... it has been
used "as is" with logging programs written in both C and VB 6 for
the PC as well as in the Macintosh and LINUX systems with minor
changes.

I can't imagine how Java could be a portability improvement over good
old fashioned C. The current code is already demonstrably portable.

A Java version would be less universal, not more.

The issue is that LotW represents an identity foundation for amatuer radio operators. The fact that contests types are associated back into the identity system is only one facit of the contest softwares. People might want to deploy there own locally ran contest with LotW being used to manage identity and QSOs.

If my module for my type of contest was popular, ARRL might choose to support it. If not, then I can use it locally on my OS of choice.

And this of course too, but we were talking about modules for contests, or at least I was.

Because there would be not graphics library portability, or choice of library.
With Java, we also get dynamic class loading which means that plugin
architectures are trivial to create.

Hamish, I'd be interested in your experiences with Java and it being less universal.

No, Greg was responding to

"What we need are some hotshot programmers who could volunteer to help
on various award modules and see what could happen."

Rewriting the client software would in no way facilitate the parallel
development of award modules by volunteer programmers.

Yes, LotW provides authentication, and could conceivably be extended
to support "user-defined contests". An LotW extended in this way
would still run on an ARRL server, however; so again, what would be
the benefit of rewriting it for increased portability?

Maybe we are talking about two different things? You seem to be talking about the system that records QSOs. I'm talking about the software that has access that data.

The person creating the contesting module would run the module locally, accessing the QSOs recorded by a particular user, and analysing the particular attributes to compute scores or validate award posibilities.

The authentication system would be used by the participant to grant such a module access to their QSO records. The person creating the contest and contest module software would provide a contest ID that should be used for recording such applicable QSOs so that the module would only have access to the QSOs that the participant wanted to use for such an award. If the ARRL wanted to sponsor such an event, it would be nice if the module could just be given to ARRL and would plug directly into the system that records QSOs for more direct and effective access to the data.

And also, the membership at large is paying for this service, so having an open development system with published interfaces would be a good thing to help the membership particpate, as well as allow outsiders to be attracted to the organization because of an inclusionary practice instead of an exclusionary one.

>>>snip<<<

Maybe we are talking about two different things? You seem to be
talking about the system that records QSOs.

>>>Yes - that system is known as LotW.

I'm talking about the software that has access that data.

The person creating the contesting module would run the module
locally, accessing the QSOs recorded by a particular user, and
analysing the particular attributes to compute scores or validate
award posibilities.

>>>The software you're proposing - a contesting module that runs
locally - does not yet exist. Since you intend it to run locally, a
platform-independent implementation would ineed be appropriate. But
this is new code, so calling for its "rewrite" makes no sense.

>>>LotW would have to be extended to support your proposed locally-
run contest modules, but would continue to run on an ARRL server.
Thus there is no rationale for rewriting LotW for platform
independence. Such an effort would only waste what few development
resources we now have.

>snip<

And also, the membership at large is paying for this service, so
having an open development system with published interfaces would be
a good thing to help the membership particpate, as well as allow
outsiders to be attracted to the organization because of an
inclusionary practice instead of an exclusionary one.

>>>Open interfaces to LotW are available:

http://www.arrl.org/lotw/developer/DeveloperIntro.pdf
http://sourceforge.net/projects/trustedqsl/

>>>Conducting LotW's development as an open source project would
increase the available development resources, but would be an effort
demanding considerable skill and experience to orchestrate over and
above the usual design, programming, and project management issues.

>>>The fraction of hams competent and interested in participating in open source project is not large enough to significantly increase LotW participation based on their numbers alone. Increasing LotW participation requires major usability improvements for amateurs around the world -- which means more applied development resources one way or another.

Correct me if I'm wrong here, but what I think Gregg is trying to describe here is, conceptually at least, a publicly available SQL interface to the LoTW database.

Resource and support issues aside, allowing the LoTW database to be queried raises integrity issues due to data mining. I suspect those issues make the prospect of unrestricted query access highly unlikely.

A question is: Are there restricted subsets of queries that might be "useful" or "interesting" which do not open the door for misuse?

DXCC country codes are assigned by the ARRL DXCC desk. They are not always assigned sequentially, but that was the case for Montenegro and Swains Island.

A list of all DXCC country codes is available in

http://www.adif.org/adif217.htm#Country%20Codes

Sorry, Hans, I should have been more explicit:

Montenegro is 514

Swains Island is 515

Also, the name of country code 296 was changed to Serbia.

The above three changes will appear in version 2.1.8 of the ADIF specification.

Thanks for the link, Dave, I'll bookmark it.

But it doesn't include the new entities. Are they #514 and #515 as I presumed?

Agreed, but I know of none for the Palm TX. It would be nice to have Java and Flash but I don't think the TX (or any Palm OS based PDA) is powerful enough. Some sites have PDA options which is nice.
It is quite a bit that Blazer does support including Java Script but not Java.
The main thing I miss is can't play chess on ICC or FICS without Java.

Not me. I held WN8WOY/WB8WOY from November 1975-77. Not a whole lot of contacts there, though just 209 in that period.

The earliest LoTW confirmation I see is from 1984, with my brother Ben, NJ8J.

The earliest LoTW confirmation I have that isn't Ben is from November of 1986, during the SS CW contest.

It certainly would be nice to see more people upload their old logs, but I can understand what a chore it is to have to type in all your old log books. I found that you are much more likely to receive a confirmation from LoTW for a decade or two old contact if it was during a contest. Those logs are more likely to be computerized and hence uploaded.

My earliest LotW confirmation is JA1PUK on 10/15/1997 ...
Nothing from my novice days 1970-1972 but then I don't have
a lot of those logs so they haven't gotten on-line.

Joe, if you haven't uploaded your old logs, then you can't complain
that you haven't gotten LoTW confirmations. You need to upload, then
you can complain. <grin>

Of course ... unfortunately I don't even have some of those logs
any more. They are from my pre-college days and were probably lost
between the two moves that my parents made and the half-dozen moves
I've made (not counting the every year move while in school).
It's a wonder that I have any logs from those days.

Actually, I'm surprised to have even one confirmation from 1977
given issues of log retention and age of some of those involved!

In my case the QSL return is so poor, 2.6%, that it is not worth sending in my old logs prior to 1989, including my 1956 VE8SP logs.

My first QSLs in LOTW are from 1984, all CW, all from
non-US Stations (England, Italy, Sweden, Poland).
That's just a few months after getting my shortwave license.

Most recent cards are RTTY, probably with automatic PC logging.
But there are also older ones - starting in 1986 from SP3BGD.

So I miss a lot of your US-QSOs in lotw.

maybe a scanner is a help..

Maybe it's busy with all of these people looking up their earliest LOTW QSL? :-)

I'm in a similar situation. I held WN8TZG/WB8TZG from February 1975-1977. No
LOTW QSLs from that period.

Nor any from my Novice/Advanced call KA8DTD from December 1979-July 1984. My
earliest LOTW QSL is with Bill in 1984. My earliest LOTW QSL that isn't Bill
is from the 1988 November SS CW.

It's due to the heat, it makes the powerlines and com cables soft, and the bytes don't flow as well....

but from here in chicagoland, my normally very high speed broadband is slow no matter what I'm connecting to.

Sex is like snow; you never know how many inches you are going to get or how long it is going to last.

I guess a lot of activity on LoTW today is for
current ops. I have uploaded files for different
variations of my call W7LPF since 1977 - the
70's are nil - - I was, and still may upload files
that I have back since starting out WN7ZQV in
1955 - but just seeing the results of my typing
in close to 25K logs from W7LPF/DU2 ops
78-81, I really don't think it is worth the time. I
continually get notification of hits for DU2 from
the E-QSL site though. Still have the logs for
W7ZQV/KG6 also to upload - but right now I
am trying to catch up on logs that I ''found'' on
CD's that I had copied when I was switching pc's
- - It sure was a lot easier and more time was
spent on-the-air when it was paper logs and
no pc's!!
Progress is great - but what enjoyment does on
get when a computer does 'everything' for them,
and they can just sit and watch the monitor.
And I agree - LoTW is very slow, taking a long,
but that is usual as was stated - first of the month,
after a contest - etc.

I don't have anything for my novice call (probably because I haven't uploaded any novice contacts).

My earliest confirmation on LotW is a QSO with KP4DLW on 80 meter CW 4 Sep 1972. The next one is HK2DP on 15 meter CW on 8 Jul 1973.

I've uploaded all my old contest logs but I still have about 30 thousand QSOs in the regular logbook that I haven't started on yet. Probably this winter.

Hi all,

I have now uploaded a file twice, but there is still no sign of it on
LoTW.
Is there a delay in processing files at the moment?
There is nothing that might indicate this on the site, and as far as I
can tell, my TQ8 file is good, so there shouldn't be a problem.

Has anyone else noticed this?

Cheers for now

Phil GU0SUP

This is the latest info shown on the LoTW site. I would guess this is the problem.
73,
Chris, AC?M

Reminder -- Logbook Processing Time -- We have received many questions about processing results not showing up as expected. While log files are often processed in seconds, at times they may sit in a queue for many hours. This depends on the total demand on the system. There is no "expected" time required for processing log files.

As demand increases, and many more operations are being performed, processing time has increased. Resubmitting logs will only slow the process. If you receive a message that says your log is queued for processing, there is no need to resubmit.

We are continually making the Logbook processor more efficient, and will be looking toward more processing power as well in the future.

From: FireBrick
Topic: 3101 Message: 3101

I DEFINETLY have seen a lag time, especially after a contest or dxpedition(s) like these past weeks.

In no instance did the lag persist over the next day.
I just waited, and sure enough, it was processed.

Usually, it's very fast.

Lately, I have gotten MANY repeat qsls.
Obviously people are resubmitting their whole logs.

My software, and I'm sure most, have built-in filters to not submit repeats.

Grandparents and grandchildren are natural allies against a common enemy!

Bill,

How do repeat qsls manifest themselves in LoTW? I am still inputting qso data and have not "signed up" for any awards, so maybe I have not seen the issue you are talking.

Subject: Re: [ARRL-LOTW] lag time

Bill,

How do repeat qsls manifest themselves in LoTW? I am still inputting qso data and have not "signed up" for any awards, so maybe I have not seen the issue you are talking.

very basically. Say I had submitted to LoTW a qso with BS7H and at some time he submitted his log which contained a qso with me, W9OL.

Upon checking my LoTW, I see the qsl, and probably, would also see it listed in the Awards module as a LoTW qsl that 'could' be accepted for credit.

Then, for instance, he transcribes more of his paper logs and uploads the now 'bigger' log instead of just the newly transcribed portion.

This will result in my seeing a NEW LoTW qsl with the same information, but now having a new 'received qsl' date.

I think some contesters, are submitting their contest logs.
I do this after each contest.
And then also appending that same contest log to their every day log.

Then after making non contest qsos, they then upload their everyday log.
If they haven't filtered out the already submitted contest log qsos, they get re-uploaded and result in overwriting the old qso, with this new uploaded qso.

That is why ARRL suggests you filter out already submitted qsos,
to not overwrite previous, and to cut down on processing time.

I do NOT know what would happen to a LoTW qso, that you needed for submission, and was included in your online submission, and then while during the submission process, was overwritten by a duplicate qso.

Right now, I have a pending online submission. If one of those qso's was now re-uploaded, how would that effect my submission?

Now having said that, It is PERFECTLY proper and a good idea, to re-upload qso's that may have incorrect or missing data.
A lot of qso parties, or mobile operators seem to forget to correct the STATE, ZONE, COUNTY when they upload qsos such as these.
At a later date they realize they were vacationing in WI instead of Cook County Illinois (please don't pronounce the S lol) and make the correction and resubmit.
Even correcting band/mode info if an error was found.
It would be no different than my recently asking an op for a new qsl as he marked 10 megs instead of 10 meters.

So ... did I answer your question or just confuse the issue even more?

Basically, nothing wrong in re-uploading qsos to correct or add data.
But re-uploading your whole log or previous qsos wastes your time and adds processing time.
Even if your logging software can't remember what's already been uploaded, the 'Signing' module has a 'not before/not after' date option which will exclude already entered qsos.

Okay, hope you're not superstitious... I just checked and see we have 13 matching Q's in the system...

So, what you're saying is if you go in and add your County, Grid, CQ Zone, and ITU Zone for these two (first) qso's:

1997-11-09 16:46z 20m RTTY
1998-01-04 15:21z 10m RTTY

then I will see some sort of change? I do see you added this extra info to the more recent contacts. (Hey!, a 10m contact between Mini-soda and Illi-noise, who wudda thunk?) :-)

So let's start there... can you "fix" those two records, reload them, and I can see what happens?

I'm curious to see how the system works (inside). I have uploaded logs with dupes, like what you pointed out in your reply. The processing report tells me I have (for example) 300 contacts, 24 dupes, and 85 qsl hits. I am under the impression the 24 dupes were thrown into the bit bucket and a net of 276 contacts are added to my account. But I can't see what happens on the "receiving" end of this transaction (the 24 dupes).

ok, I corrected the missing info.
so what I did was 'overwrite' the previous or missing/incorrect data which will result in one 'updated' qsl for both of us
and as I had mislogged the 10 meter as K0RCJ, and now corrected it to K0RC, we will both get one New qsl.

The incorect qso I uploaded will not be overwritten but will live forever beneath the streets of Boston and never return....
as that old song goes.

quite a few non-USA LoTW qsls received in past few days.
UA9APA, TM6X, TG9AKH, plus many more.
and for us IOTA people, KD6WW/VH0 with province and IOTA # in the details.

Hope for the day County and IOTA awards can be applied for via LoTW.
(I'm getting old, will I see that day?)

Topic: 3107 Message: 3108

On the old computer:

1) Open tQSL Cert
2) Right click on the first certificate
3) select "Save" and save the PKCS#12 file (backup)
4) repeat steps 2 and 3 for each certificate
5) copy the backup files to a CD/floppy/etc.

On the new computer:

1) Install tQSL (fresh)
2) Open tQSL Cert
3) Select "file | load Certificate File" and select
the first of the backups you saved from the old computer
4) Repeat for each backup
5) Close tQSL Cert
6) Open tQSL
7) recreate your Station locations (Station | Add Location)

73,

... Joe, W4TV

3110. LOTW and EQSL

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-08-07 18:58:27 UTC
From: Ken Kinyon
Topic: 3107 Message: 3110

I upload all my contacts to both EQSL and LOTW. I have noticed that I get QSLs on EQSL that don't match my uploads. Usually I check my log and find it is a time error. I'm usually not sure who messed up, but since I get my time from the computer synched with internet time standard I imagine it is often the other stations' bad time. In the days before internet logging, I would send a card back with my time and not worry about it. It seems to me that since most EQSL users are also using LOTW, that it would be a simple matter to correct my time to match that of the other stations and upload it to the LOTW. On first look, I see nothing basically wrong with doing this, but I am interested in others views of whether or not this is ethical.
No, I'm not trying to start a row, I am actually interested in other's opinions on this.
Thanks,

Hi all,

Thanks for the answeres re the lag time.
It actually took over 24 hours before the QSO's I had uploaded showed up in the LoTW log!
I have not noticed this amount of delay in the past, so maybe it is just handling more and more these days!

Now another query.....
I have had to renew my TQSL Certificate, and although I have now done this on several occasions before, I read and re-read the instructions, as I somehow managed to scrwe it up big time last year.

The FAQ's clearly state that when have received the TQ6 file back from LoTW, you "open TQSLCert, and you will see two certificates, one with a red circle/bar over it. This will go away, leaving only your renewed certificate".

WRONG! I now have TWO certificates in TQSLCert!

Can I safely delete the "older" one(?) as the FAQ's don't seem to mention this??

BTW..... Nice to see that the certificate is now valid for THREE years!

Phil, I can speculate that you renewed your certificate before the expiration date of the old one. I did the same thing. I carefully checked the dates on both and then deleted the old one. My guess is that if you wait until the old one expires, the red circle will show up. I had not noticed that the new one is good for 3 years. Thanks for the heads up.

3113. Recurring QSl

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-08-07 20:22:37 UTC
From: Julio Peralta
Topic: 3113 Message: 3113

Has anybody had a problem with recurring QSL's when you download from LOTW. I have one QSL that shows up every time I download. It indicates that it is already checked in but appears never the less. The QSO in question appears in my logging program as having been sent to LOTW and received from LOTW.

Any ideas?

Julio, W4HY

3114. Re: [ARRL-LOTW] LOTW and EQSL - Long winded

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-08-07 21:17:25 UTC
From: Robert Chudek - K0RC
Topic: 3114 Message: 3114

Ken,

I also upload my logs to both systems. So far I have worked back to my 1995 logs, when I moved to my current QTH.

I have about 6 months experience with eQSL and a couple months with LoTW. Like you, I am trying to understand the nuances of both systems. I published an article in our local DX Club newsletter and shared some of my initial observations with these two systems. If you're interested in reading it, look for the TCDXA June Grayline Newsletter here: www.tcdxa.org

I have a few more months experience under my belt now. Regarding changing the times and dates for your QSL's, I don't see a major problem with this. As a matter of fact, several of my old contesting logs were recorded in local time, not UTC. I discovered this after I uploaded to the online databases.

I did find it easier to detect and correct my mistakes using the eQSL.cc system. For example, I looked at my "outbox" for January 1995 and saw I had 600 contacts. Scanning the list of calls and timestamps, I also saw there were VERY few QSL matches from other stations.

I then called up my "inbox" for January 1995 and saw I had 150 incoming cards. None of these 150 contacts were matched by the system. They were a "near miss". (Or as George Carlin asked, "Why do airlines call it a 'near miss' when two planes almost collide? That would be a 'near hit' to me!"

Upon closer scrutiny, I saw these "near hits" were ARRL RTTY contest QSO's and all of them had a timestamp 6 hours ahead of my log. This tells me I had my clock set to local time instead of UTC. (The Central Time Zone is 6 hours behind UTC in the winter.) With a clear conscience I fixed the timestamp in my log and reloaded these 600 contacts to eQSL.cc and LoTW.

There is a major difference between the systems in the fact that you CAN delete contacts from eQSL.cc but not LoTW. I did remove my 600 "bad" contacts from eQSL.cc before I uploaded the corrected QSO's.

With LoTW, these invalid records simply "hang around" in their system. Someone mentioned these records may eventually be purged from the system by some yet un-invented process. I believe this is an unfortunate flaw in the LoTW system. The system is storing and thrashing through thousands of bogus records which eats up both processing time and storage. But I come to the table 3 years after the system implementation and am restating the obvious.

Using LoTW, you can achieve a similar QSO reconciliation, but it requires close scrutiny of your online records. You are limited to reviewing only your "outgoing" contacts. You can't see "incoming" QSL requests. You have to look for contacts that don't match. The next step is to discover whether the station is a LoTW participant or not. Is they are, then you can get into an email dialog to investigate which end of the QSO may be recorded wrong. I just

went through this exercise with Bill - W9OL, regarding a contact during the 1997 WAE RTTY contest. I won't disclose who's information was wrong because I hope to make more contacts during the contests with him! :-)

The previous discussion is my experience when finding bulk records that don't "jive." When I queried some hams regarding single QSO's that didn't "jive", some were satisfied to simply change the timestamp that I thought was correct. I am not comfortable with this because you can be verifying busted call signs if you don't pay close attention to the details. It takes time to investigate these anomalies. I have uploaded over 33,000 contacts so my experience is going to be more "intense" than someone who uploads their logs every week or month.

I have rejected some eQSL's because they are obviously wrong. For example, one rejection was for a PSK contact. I have never operated PSK. The callsign was not in my log - ever! That was an easy call. In another example, my QSL request was (rightfully) rejected because, after investigating the contact via emails, it became apparent I was one of two stations on frequency at that time, but I did not make the contact. I hear these situations in contests often enough to accept that outcome. "Will that be paper or plastic for your NIL, sir?" :-)

That's my take on it right now. This looks like good fodder for a continuation of my original article!

Like Ken stated, my intention is not to start a holy war, but I would really like to hear from people why there is such (apparent) animosity toward one or the other systems. I see this on numerous QRZ.COM listings often. "Absolutely NO eQSL's", "Direct only, NO LoTW", etc...

Subject: [ARRL-LOTW] LOTW and EQSL

I upload all my contacts to both EQSL and LOTW. I have noticed that I get QSLs
on EQSL that don't match my uploads. Usually I check my log and find it is a
time error. I'm usually not sure who messed up, but since I get my time from the
computer synched with internet time standard I imagine it is often the other
stations' bad time. In the days before internet logging, I would send a card
back with my time and not worry about it. It seems to me that since most EQSL
users are also using LOTW, that it would be a simple matter to correct my time
to match that of the other stations and upload it to the LOTW. On first look, I
see nothing basically wrong with doing this, but I am interested in others views
of whether or not this is ethical.
No, I'm not trying to start a row, I am actually interested in other's opinions
on this.
Thanks,
Ken W7TS

That appears to be the way the LotW system works. Alittle confusing perhaps but really presents no problem.

Very simply.
That person does NOT just send qsos 'since' his last submission like most people.
He sends his entire log.
or
He has a problem with his log that it is not being recorded as 'already submitted' to LoTW.

Most of the top of the line logging programs will only select qsos that have NOT been previously submitted.

My guess, is that he's NOT using such a system.

While it does waste a bit of processing time, it's of no harm.
Eventually the LoTW software will have some way of determining a previous submission.

A logging application can direct LotW to download either uploaded QSOs, or QSLs generated from those QSOs. In both scenarios, LotW provides an "only tell me about new ones" option. When a logging application downloads QSLs, LotW conveys the date and time at which the most recently-created QSL was generated. The logging application can remember this date and time, and supply it to LotW the next time the user checks for new QSLs; in theory, LotW would then only download QSLs generated after the specified date and time. The user would be informed of each newly-generated QSL exactly once.

Unfortunately, there's a longstanding defect in the LotW implementation: it ignores the time, and uses 0Z instead. Thus if no new QSLs have been generated since the last time you checked, LotW will re-download all QSLs generated on the date the last LotW QSL was generated -- which might be just one, or might be several.

The same thing happens when downloading QSOs.

Hello Mike (W5UC),

Yes, I did renew before the old one expires, but the FAQ's imply that you MUST renew before expiry of the old one, and the "old" one will disappear regardless.

I will wait a few more days, but I don't want to try exporting a TQ8 just yet, in case it screws something up.

And yes, 3 years is much better!

Thanks for the information Prasad!

That's a very good point. It certainly highlights how a person might take advantage of the system in this situation.

I believe after an eQSL is simply viewed, that contact can no longer be deleted from the eQSL.cc database. I don't think they even have to create a matching record for it to get "locked into" the system.

I'll have to research this more because I don't remember the trigger that locks a QSO/QSL into place. I had several of these instances when I deleted my contest log before uploading the corrections. A message popped up telling me it would not delete some of the contacts in the date/time range I defined. These were some of my early contest logs where my clock was set to local time instead of UTC.

I have to say if I found a VU2 card in my inbox I would be curious to see what it looked like and I would want to view it too. Of course from the other side of the QSO, as in your case, you really don't know my intentions for the card. And that is the crux of the issue!

73 de Bob - K0RC in MN

BTW, I worked VU2RAK in May of this year, the only India station I have worked from this QTH. There's no confirmation in either system yet.

Subject: Re: [ARRL-LOTW] LOTW and EQSL - Long winded

Hello Bob and Ken

I had a problem with eQSL.cc. I was operating my mother's station - VU3FED - in 1996 CQ WPX CW contest - a small effort with about 531 QSOs. Inadvertently, I uploaded this log into eQSL under my own call - VU2PTT

Imagine my surprise later when I found that I had 18 eQSLs from hams(!) to VU2PTT. They saw that they had QSLs from VU2... in their Inbox and manufactured a log to match it although we never had a QSO. I could only look at that and kick myself for uploading the wrong log. This issue does not happen on LoTW where you can get the QSL only when the other station uploads a matching log entry.

I now only confirm QSLs that come into my Inbox in eQSL whereas in LoTW I upload all my old logs as and when I convert them form paper. I agree we should have a tool to delete bad entries in our logs on LoTW, and I am guilty of 531 QSOs perpetually floating around there in the LoTW database :)

73 de Prasad VU2PTT

On 8/8/06, Robert Chudek - K0RC <k0rc@...> wrote:

Ken,

I also upload my logs to both systems. So far I have worked back to my 1995 logs, when I moved to my current QTH.

I have about 6 months experience with eQSL and a couple months with LoTW. Like you, I am trying to understand the nuances of both systems. I published an article in our local DX Club newsletter and shared some of my initial observations with these two systems. If you're interested in reading it, look for the TCDXA June Grayline Newsletter here: www.tcdxa.org

I have a few more months experience under my belt now. Regarding changing the times and dates for your QSL's, I don't see a major problem with this. As a matter of fact, several of my old contesting logs were recorded in local time, not UTC. I discovered this after I uploaded to the online databases.

I did find it easier to detect and correct my mistakes using the eQSL.cc system. For example, I looked at my "outbox" for January 1995 and saw I had 600 contacts. Scanning the list of calls and timestamps, I also saw there were VERY few QSL matches from other stations.

I then called up my "inbox" for January 1995 and saw I had 150 incoming cards. None of these 150 contacts were matched by the system. They were a "near miss". (Or as George Carlin asked, "Why do airlines call it a 'near miss' when two planes almost collide? That would be a 'near hit' to me!"

Upon closer scrutiny, I saw these "near hits" were ARRL RTTY contest QSO's and all of them had a timestamp 6 hours ahead of my log. This tells me I had my clock set to local time instead of UTC. (The Central Time Zone is 6 hours behind UTC in the winter.) With a clear conscience I fixed the timestamp in my log and reloaded these 600 contacts to eQSL.cc and LoTW.

There is a major difference between the systems in the fact that you CAN delete contacts from eQSL.cc but not LoTW. I did remove my 600 "bad" contacts from eQSL.cc before I uploaded the corrected QSO's.

With LoTW, these invalid records simply "hang around" in their system. Someone mentioned these records may eventually be purged from the system by some yet un-invented process. I believe this is an unfortunate flaw in the LoTW system. The system is storing and thrashing through thousands of bogus records which eats up both processing time and storage. But I come to the table 3 years after the system implementation and am restating the obvious.

Using LoTW, you can achieve a similar QSO reconciliation, but it requires close scrutiny of your online records. You are limited to reviewing only your "outgoing" contacts. You can't see "incoming" QSL requests. You have to look for contacts that don't match. The next step is to discover whether the station is a LoTW participant or not. Is they are, then you can get into an email dialog to investigate which end of the QSO may be recorded wrong. I just went through this exercise with Bill - W9OL, regarding a contact during the 1997 WAE RTTY contest. I won't disclose who's information was wrong because I hope to make more contacts during the contests with him! :-)

The previous discussion is my experience when finding bulk records that don't "jive." When I queried some hams regarding single QSO's that didn't "jive", some were satisfied to simply change the timestamp that I thought was correct. I am not comfortable with this because you can be verifying busted call signs if you don't pay close attention to the details. It takes time to investigate these anomalies. I have uploaded over 33,000 contacts so my experience is going to be more "intense" than someone who uploads their logs every week or month.

I have rejected some eQSL's because they are obviously wrong. For example, one rejection was for a PSK contact. I have never operated PSK. The callsign was not in my log - ever! That was an easy call. In another example, my QSL request was (rightfully) rejected because, after investigating the contact via emails, it became apparent I was one of two stations on frequency at that time, but I did not make the contact. I hear these situations in contests often enough to accept that outcome. "Will that be paper or plastic for your NIL, sir?" :-)

That's my take on it right now. This looks like good fodder for a continuation of my original article!

Like Ken stated, my intention is not to start a holy war, but I would really like to hear from people why there is such (apparent) animosity toward one or the other systems. I see this on numerous QRZ.COM listings often. "Absolutely NO eQSL's", "Direct only, NO LoTW", etc...

You don't check this before a contest? I (nearly) always do, especially after I started one contest, and after making about 100 contacts, I found that the time reported on my computer was way wrong. Took a lot of work to fix it, it wasn't as easy as just adjusting the hours....

I don't think these records are this much of a problem. True, they take up a small amount of space. It takes less than 50 bytes to store a LoTW QSO. And, since they are incorrect, they will never match anything. They do little harm remaining in the system.

I have over 33,000 QSOs uploaded. Only about 200 were uploaded with errors. (Mostly from manually transcribing some old DOS program logs, and I had phone instead of CW)

> Using LoTW, you can achieve a similar QSO reconciliation, but it
> requires close scrutiny of your online records. You are limited to

There's no such thing with LoTW. You don't send QSLs. You just upload your log. Your entire log is used to match other QSOs in other logs. There are no "incoming" QSL requests.

In fact, those very erroneous QSOs could cause a problem if there were such a thing. If you could look at other people's logs, you could "manufacture" QSOs that didn't take place.

> You have to look for contacts that don't match.

The LoTW has a note about this -- if you upload 100 or so recent contacts and don't get a single confirmation, then something is

likely incorrect.

> Like Ken stated, my intention is not to start a holy war, but I
> would really like to hear from people why there is such (apparent)
> animosity toward one or the other systems. I see this on numerous
> QRZ.COM listings often. "Absolutely NO eQSL's", "Direct only, NO
> LoTW", etc...

I don't do eQSL, because it doesn't count for any awards, other than eQSL's own. At one point I considered uploading my log data for others, but I couldn't figure out how it worked -- it looked like I was going to have to manually confirm each of the QSL requests I had pending there. That sounded like a chore, so I haven't done it.

A lot of people have a pent-up hatred for the League, so not likely LoTW is just another outlet for it. Others think that LoTW will do away with paper QSLs (not likely!), so they resist.

Others have rebelled against the multi-step process to obtain a certificate. Even some very smart fellows have tried multiple times and have been unable to access the system. (This part I don't understand, if you follow the steps carefully, it's not that hard)

K0RC>>> I doubt we will ever know for sure. If each record is 50 bytes, and there's over 100 million records on file, that's a 5 terrabyte database. When users upload duplicate logs do these records also get stored or are they immediately discarded? From what I observed during my uploads, it appears a log is aborted when the system determines it is a duplicate. But there would still be a little overhead because it stores this activity and statistics in the transaction log in your account.

> I have over 33,000 QSOs uploaded. Only about 200 were uploaded with

> There's no such thing with LoTW. You don't send QSLs. You just upload
> your log. Your entire log is used to match other QSOs in other logs.
> There are no "incoming" QSL requests.
>

K0RC>>> Yes, this is symantics, it really depends on how you view the system. For example, lets say you worked a couple of stations and wrote the info on a scrap of paper. You tell yourself you will log them the next time you have your computer running. In the meantime, the scrap of paper gets pushed off the back of the desk. These QSO's slip your mind and they don't get logged. When you upload your log, these contacts are not included, of course.

K0RC>>> The other stations upload their logs which include these QSO's. With LoTW, you will never know you have missing QSO's. With eQSL, you will get an email (if you select this option) telling you there is/are QSL's that have arrived for you. You also have the "inbox" where you can review all incoming requests.

K0RC>>> I understand LoTW is not a QSLing system in the traditional sense. But the concept of matching log entries is the same for both systems.

> In fact, those very erroneous QSOs could cause a problem if there
> were such a thing. If you could look at other people's logs, you
> could "manufacture" QSOs that didn't take place.
>

K0RC>>> You can't look at other people's logs in either system. In eQSL.cc you can see requests for confirmation of QSO's. This is no different than going to your PO Box and finding a hard copy QSL card requesting a confirmation. With LoTW you don't have the equivalent of the PO Box, so you are operating in the blind in this respect.

K0RC>>> Earlier in this thread Parsad - VU2PTT pointed out a problem with the eQSL.cc system that allows a user to accept a confirmation for

a QSO that never really took place. I had heard rumors that users could "troll" for cards, but this is the first real-life example I have seen of how it can happen. This scenario would not have been possible in the LoTW system (because the users do not have the "inbox").

> > You have to look for contacts that don't match.
>

> pending there. That sounded like a chore, so I haven't done it.
>

K0RC>>> There are over 60 award sponsors (excluding eQSL.cc) that offer awards using the eQSL system. If you are a paper chaser, or a new ham just getting started, this might be an attractive option for you. Also, that system supports SWL requests too. But if you're after the ARRL WAS and DXCC certificates, LoTW is the only game in town (besides traditional cards).

K0RC>>> As far as uploading and managing your log, you can upload a standard ADIF file and forget about it. You don't need to manually confirm anything. If contacts happen to match, great... At that point you would be using that system just like LoTW.

K0RC>>> You do not need to look into your "inbox", but if you do, it can help you identify logging inconsistencies or other problems. For example, I have a couple dozen QSL requests spread across several months in 1997. I have no logbook data for those months. What this tells me is I need to locate some missing contest logs. If I only used the LoTW system, I would have no clue that there was a problem on my end.

K0RC>>> To upload your log, there's a page with a filename box similar to LoTW. You browse to your ADIF file location and click upload. I am not (yet) using my logging program to manage my uploads. So I don't have experience with any of the loggers and their automated upload systems.

> A lot of people have a pent-up hatred for the League, so not likely
> LoTW is just another outlet for it. Others think that LoTW will do

No I don't think this is the way the system works. If it was why don't the other 400 or so QSL matches show up time after time when I down load QSL's. Only this one contact has shown up on every download for over 2 years. Something isn't right.

Thanks for the reply Dave. I'm using LOGic8 as my logging program and I know that it only uploads QSO's since my last upload. This one QSL has been on every download since I first started using LOTW. It's marked as having already been received but it keeps showing up. Do you have any ideas how to stop that from happening?

Julio, W4HY

Subject: [ARRL-LOTW] Re: Recurring QSl

A logging application can direct LotW to download either uploaded QSOs, or QSLs generated from those QSOs. In both scenarios, LotW provides an "only tell me about new ones" option. When a logging application downloads QSLs, LotW conveys the date and time at which the most recently-created QSL was generated. The logging application can remember this date and time, and supply it to LotW the next time the user checks for new QSLs; in theory, LotW would then only download QSLs generated after the specified date and time. The user would be informed of each newly-generated QSL exactly once.

Unfortunately, there's a longstanding defect in the LotW implementation: it ignores the time, and uses 0Z instead. Thus if no new QSLs have been generated since the last time you checked, LotW will re-download all QSLs generated on the date the last LotW QSL was generated -- which might be just one, or might be several.

The same thing happens when downloading QSOs.

From: Phil Cooper
Topic: 3125 Message: 3125

Hi all,

Following on from my last email about ending up with 2 cert's in TQSLCert, I read and re-read the FAQ's but it kept implying that the new one would auomatically delete the old one.

It wasn't until I logged out of LoTW, and scrolled down the page that I found mention of the fact that v1.11 of the software will NOT automatically delete the old cert, and you MUST do it manually!
It appears that this is a bug in the software, which is readily admitted by the LoTW team, BUT, the gripe is that they do not mention this on any of the help pages about renewing cert's.

So, be warned, and make sure you delete the OLD cert, but only AFTER you have saved your p12 file, just in case!

Here is my take on this recurring QSL.

I is a major problem for two reasons.

First it is putting unessassary junk into the LoTW and probably giving it more to process every time a request is made of the system.

Secondly, and this could be the big one. It allows signing errrors to happen. I shall try to explain by telling my experience.

I recieved a real QSL card from a USA station, thats fine I enter the state into into my log from the card. Now I use a logging program that allows me to also get this information back from LoTW and if it does not match it adds a note so that a human can check out why. Now this one was interesting because I still had the card handy and it clearly said MA, but LoTW QSL said MI. So I emailed the person concerned and asked whats up.

Well very much red faced this was what had happened. The station concerned had shifted QTH and had put the original QSO's up into the LoTW system using the correct QTH but had more recently unintentionally uploaded them again signing them with the new QTH with his new QSO's.

By the signing process I mean what you do when you create the *.tq8 file you upload.

So is it a problem?

YES IT CAN BE A BLOODY BIG PROBLEM!

Judging by the number of QSL's I see comming up again and again there are an awfull lot of users re submitting the same QSO's again and again each time they upload, if they shift QTH the whole lot gets signed to the new QTH if they update that when signing there new logs for upload.

Thats my take on it. It is a major problem, brobably one of the biggest facing the accuracy of the LoTW system.

<Devil's advocate on>

So when that P5 card doesn't match your LoTW log submission you won't be upset that you never get the confirmation? You won't be curious to know what happened to it?

Using the eQSL.cc system you get a "second chance"... You can review all incoming requests just like a hard copy QSL card that arrives in the mail. If the numbers don't match, you can investigate the circumstances. If you don't care, you can ignore your inbox.

With LoTW the confirmation never arrives, period. If it were a hard copy card, it might be lying in the ditch a mile from your mail box. You don't even know if it was sent in the first place.

Thanks for the suggestion Dave. I've mentioned it to Dennis a while back but he thought it was a LOTW problem. However I am beginning to believe it's something in LOGic that is not telling LOTW that it has receive that QSL. Thanks for the help.

Julio, W4HY

Hello John,

I have seen this scenario too. And I have seen other scenarios.

On the eQSL.cc system I have received eQSL requests for a date/time/band/mode that matches exactly, but with a different callsign. When I investigate, I find either the fellow was running a contest call and uploaded the contacts under his personal call (or vis a versa), or he has a new callsign and loaded all his previous QSO's under the newest callsign.

On the LoTW system I see the majority of contacts do not contain QTH, Zone, or Grid Square information. This data should be a requirement, and not allow the creation of encrypted files without it! That said, the more times a person moves QTH's, or acquires supplemental callsigns, the more complex the task becomes to keep all this information categorized properly. It's not impossible, you simply need a better understanding how the system really works. Frankly, the more complex the job becomes, fewer people will devote the time and resources to deal with it.

How does that old saying go... ??? ... To err is human, to really foul things up it takes a computer!

Subject: [ARRL-LOTW] Re: Recurring QSl

Here is my take on this recurring QSL.

I is a major problem for two reasons.

First it is putting unessassary junk into the LoTW and probably giving
it more to process every time a request is made of the system.

Secondly, and this could be the big one. It allows signing errrors to
happen. I shall try to explain by telling my experience.

I recieved a real QSL card from a USA station, thats fine I enter the
state into into my log from the card. Now I use a logging program
that allows me to also get this information back from LoTW and if it
does not match it adds a note so that a human can check out why. Now
this one was interesting because I still had the card handy and it
clearly said MA, but LoTW QSL said MI. So I emailed the person
concerned and asked whats up.

Well very much red faced this was what had happened. The station
concerned had shifted QTH and had put the original QSO's up into the

LoTW system using the correct QTH but had more recently
unintentionally uploaded them again signing them with the new QTH with
his new QSO's.

By the signing process I mean what you do when you create the *.tq8
file you upload.

So is it a problem?

YES IT CAN BE A BLOODY BIG PROBLEM!

Judging by the number of QSL's I see comming up again and again there
are an awfull lot of users re submitting the same QSO's again and
again each time they upload, if they shift QTH the whole lot gets
signed to the new QTH if they update that when signing there new logs
for upload.

Thats my take on it. It is a major problem, brobably one of the
biggest facing the accuracy of the LoTW system.

73 John ZL1BYZ.

Very good Bob, I liked the old saying. Yes I was sure there would be other senario's but didn't want to confuse the humans, just get the point across that uploading QSO's over and over is not a good idea.

The best each one of us can do is spend a little time to understand what we are doing to make our own log submitions as accurate as possible.

Just about time to make some sparks again and see if you guys can hear me today.

Check your math. 100 million 50 byte records is 5 GB, not TB.

> When users upload duplicate logs do these records also get
> stored or are they immediately discarded? From what I observed
> during my
> uploads, it appears a log is aborted when the system determines it
> is a
> duplicate.

If you upload a record that is a duplicate, it replaces the old
record, it does not insert a duplicate. If the duplicate matches a
QSL, it will re-issue a QSL.

This is actually kind of irritating, too, because it causes old QSLs
to bubble back to the top of the list. This is part of the problem
with people signing and uploading their entire logs, when they only
need to update a few weeks or months of activity.

> K0RC >>> You keep meticulous records Bill! I found at least 3 of my
> contest logs had wrong time stamps.

It took a lot of work to get to this point. A lot of files were just
plain text output, that had to be manually converted to Cabrillo.
That was a big pain! One of the logs was a special field day logger,
and the 15m log with about 300 QSOs was not readable. I actually had
to write a program to pull the fields out of that file and create
Cabrillo text. I discarded the one contact that was dmanaged.

> With that experience under my belt and having
> manually entered the first 100 Novice qso's into my logger, I hope I
> live long enough to get the 35 years of missing data online!

Keep plugging at it. There's only so much data to be entered,
eventually you'll get through it.

> K0RC>>> Yes, this is symantics, it really depends on how you view the

> and they don't get logged. When you upload your log, these contacts
> are
> not included, of course.

If you don't keep a good record, then no system is going to work
well. If you received a paper QSL under this scenario, and it wasn't
in your logbook, how would you tell the QSO ever took place?

I do know of certain M/M stations who don't bother to look up QSOs at
all. You send them a QSL, they just send one back. It's too much
trouble to look them up.

> K0RC>>> The other stations upload their logs which include these
> QSO's.
> With LoTW, you will never know you have missing QSO's. With eQSL, you
> will get an email (if you select this option) telling you there is/are
> QSL's that have arrived for you.

The crux of this problem is back record-keeping, not LoTW.

> K0RC>>> I understand LoTW is not a QSLing system in the traditional
> sense. But the concept of matching log entries is the same for both
> systems.

The nice thing about it is that it is positive and sure -- if you
have a match, you definitely had a contact. There's no chance for
manufacturing contacts.

> But if you're after the ARRL WAS
> and DXCC certificates, LoTW is the only game in town (besides
> traditional cards).

I've gotten WAS mixed, Phone, and just qualified for CW after the
NAQP CW contest this weekend.

> As far as uploading and managing your log, you can upload a
> standard ADIF file and forget about it.

The "signing" portion of the LoTW process serves two purposes. The
first is to attach the key and hash so that the system can tell that
the submission is from a certificated user, and the submission hasn't
been modified in transit.

The second purpose is to note the location the contacts took place.
At a minimum, this is the DXCC entity, but may include the state,
county, grid square, etc.

> I have a couple dozen QSL requests spread across several months
> in 1997. I have no logbook data for those months. What this tells
> me is
> I need to locate some missing contest logs. If I only used the LoTW
> system, I would have no clue that there was a problem on my end.

The problem here isn't LoTW, it's poor record-keeping. <grin>

> K0RC>>> Yeah, I remember that goal to become "the paperless
> society"...
> wasn't that supposed to happen in the 1980's?

Yup, we just invented computers which allowed us to create more paper
even faster....

Yup, this sort of system abuse also slows things down by processing
and re-processing the same contacts.

It also causes problems by robbing people of confirmations they
otherwise earned. Hopefully, this type of operation can be corrected
by education of the users.

Appreciate your input Bill.

Some how there needs to be a lot of education because from what I can see this is happening an awfull lot.

I see this when I look at my recent QSL's just out of interest, but cant find the new ones because they are all repeats bubbling back up, just crazy.

Hopefully talking about it here will raise awareness.

73 John ZL1BYZ.

From: Gil Baron
Topic: 3137 Message: 3137

I sent my renewal files EARLY this morning but they are not replied to yet.
I assume that the work bankers hours on this and that the process is not automated so that it could go 24/7!
Is that correct? It is not automated with all the technology available?

It is not a big deal a I have just received the notification today , just a surprise.

Relax, Gil, you sent in the stuff on a Saturday. The renewal process is automated but the e-mail has to be handled by humans.

I sent mine in last weekend and had the response in a day or so after the office was open. I'm sure yours will come directly. Spend a few hours this weekend in WAE DX contest and don't worry about it. It will come.

I believe that change happened about a year ago. When I renewed
mine, somehow it would only let me set valid QSO dates through
December 2006, however. I guess I'll worry about that in another 4
months!

As I see it, the technical work on LOTW is largely "done", and
the software developers are mainly in maintenence mode. Most of
the work now needs to be done on the marketing side, as many have
correctly stated. Domestically, I think LOTW is nearing critical
mass in about 12 to 18 months. Internationally is where the adoption
rate is low.

In order to increase participation in LOTW, I think a plaque should
be awarded for each ARRL DX contest (phone and cw) for the station
who is able to get the most LOTW QSL's for that weekend in the first
30 or 60 days follwing the contest. The might want to restrict the
plaque to DX only. No need for another contest.

Just an idea.

Tim K6GEP
following the contest.

Obviously nicer although I have no understanding of why it is ever needed to renew. If you keep your key secret it is secure, if you don't it is not so what is the deal.
I see nothing changes except the date.
OTOH since you get three years now it is not so bad.

Might not be a bad idea, with low implementation overhead.

I would make the time period 60 days, though, because many operators
will not upload their LotW logs until the 30-day deadline for contest
log submission has passed.

Your FCC license is only in effect for a designated time. If you don't renew it, the call sign eventually becomes available for another licensee.

If your LotW certificate went on in perpetuity, the new holder of the callsign wouldn't be able to get his/her own certificate to upload records for that call.

I just ran across a glitch in the system when I recently applied for an received a new certificate for my current callsign. The instructions tell you when filling out the renewal application for a certificate to enter the begin date for that callsign and "for current callsigns, leave the end date blank." The problem? My license expiration date is in July of next year. Because I followed those instructions, I now have a certificate good through August of 2009 for a license that expires in 2007.

It shouldn't be a problem, because obviously I plan to renew my license, and I don't plan to change my callsign. But perhaps the instructions should ask the applicant to leave the date blank "if your license expiration date is more than three years in the future, otherwise, enter your license expiration date" and then issue the certificate only for that period.

Hello fellows

What is the criteria for LOTW to match a QSO and produce a QSL ?

I guess there must be some time window that is accepted, including day change, Correct ?
Does both RST need to match exactly ?

Also, if one signs CALL/QRP, must both sides matches the /QRP given its not a different location ?

How about mode ? PSK (generic) versus PSK31 or other digital modes.
Must the match be perfect ?

I have uploaded about 3K qsos to have an initial idea about system. So far I am pleased with what I saw.

Gentlemem

Other than the function FIND CALL on the LoTw page is there a way to get a list of calls that have logs uploaded for ?

Thanks Fred PY2XB

The free-ware DXLab Suite provides two applications that utilize
HB9BZA's "known internet participants" list:

1. DXView

When you type a callsign into this application, it displays the
callsign's DXCC entity, location, and bearing from your QTH; this
information is displayed both textually, and as a signal path plotted
on a world map along with the solar terminator and auroral zone
boundaries. If you have the appropriate hardware interface, DXView
can rotate your antenna to the correct bearing with a single click.

With the HB9BZA list available, DXView indicates whether the callsign
you entered is know to participate in LotW.

2. SpotCollector

This applications collects DX spots from up to 6 spot sources, such
as telnet clusters, the DX Summit web cluster, or a local packet
cluster. These spots are combined and stored in a local database,
eliminating duplicates and providing one entry for each active DX
station. Such entries are easily sorted, or filtered by callsign,
DXCC entity, band, mode, continent, or spotter location. If you're
logging with DXKeeper (the DXLab Suite's logging component), spot
database entries are colored as to "need" based on DXing objectives
you specify. And if you're logging with DXKeeper, you can upload QSOs
to LotW with a single mouse click, and update your log to reflect
LotW confirmations with another mouse click.

With the HB9BZA list available, SpotCollector highlights the spot
database entries for stations known to participate in LotW.

All members of the DXLab Suite are free, and available via
www.dxlabsuite.com . Installation is fully automated.

73,

Dave, AA6YQ

I have been using "LOTW Query" by http://bbcyber.com/ If you are
already using a logging program and dont want all bells & whistles,
this one does a good no fuss lookup job and easy to keep up to date.

I am new to the group, and this was my big question I wanted answered.
I was reading over this responce and I have would like to comment
about this.

(How about mode ? PSK (generic) versus PSK31 or other digital modes.
Must the match be perfect ? yes)

I am sure this is the same for SSB Voice. I am not sure about how all
logging programs work with LOTW, but I know that when I used my old
program that had LOTW upload the input for SSB used "SSB Voice" In
the program I use now it SSB. So if I KB3LZV talked to My other
personality KB3LZV-1 and the QSO times and calls matched on upload.
However; If KB3LZV-1 Used my old olgging program an inputed SSB Voice,
and KB3LZV inputed SSB. Would the QSO match.

Anyways I hope this mess that I typed is understandable.

73's KB3LZV

From: C.M. Christensen
Topic: 3152 Message: 3160

What emission modes are supported by LoTW?

LoTW supports the emission modes allowed by the ADIF specification with the exception of "ASCI" (ASCII is a character set, not an emission mode). Each mode is mapped into a MODE GROUP for purposes of matching QSOs. The modes currently allowed by LoTW are:

Mode Mode Group
CW CW
PHONE PHONE
IMAGE IMAGE
DATA DATA
AM PHONE
FM PHONE
SSB PHONE
ATV IMAGE
FAX IMAGE
SSTV IMAGE
AMTOR DATA
CLOVER DATA
FSK31 DATA
FSK441 DATA
GTOR DATA
HELL DATA
HFSK DATA
JT65 DATA
MFSK16 DATA
MFSK8 DATA
MINIRTTY DATA
MT63 DATA
OLIVIA DATA
PACKET DATA
PACTOR DATA
PSK125 DATA
PSK31 DATA
PSK63 DATA
Q15 DATA
RTTY DATA
THROB DATA

This information is part of the FAQ section on the LoTW pages.

73,
Chris, AC?M

I'm not sure I follow everything you said.
But...

Say you operate PSK63 or Olivia.
The tQSL program has the ability to ente mode specifics.
Under File, select Preferences> ADIF MODES

and name your mode to one of the conventional modes.
For instance, DXBase can log many of the varieties of PSK
and I entered
PSK63F->PSK63

Which took my logs adif mode name of PSK63F and sent it to LoTW with the mode name of PSK63.
LoTW doesn't care about the 'exact flavor' of the digital modes, just the basic mode name.

Is that what you were inquiring about?

If my logging program recorded a qso with KB3LZV as USB and your submission just said "Phone" or "SSB"
The LoTW qsl I would see....would indate USB and the one you saw would indicate Phone.

In fact...I recently clicked on the wrong 'digital' mode prior to uploading to LoTW.
I marked it as PSK while the other person had it correctly uploaded as RTTY.

The LoTW qsl he received indicated RTTY while the LoTW QSL I saw on my screen indicated PSK.

At the present time...all phone counts for phone, regardless of it being SSB or AM or (most forget that SSTV counts as a phone qso).
All rtty, and the various flavors of PSK, MFSK, Olivia, Picollo, etc count towards digital.

At least that's what I deriving from my DXCC totals.
Hope I didn't screw this up but sure someone will correct any misunderstanding I have.

3164. LOTW progress

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-08-28 17:24:36 UTC
From: Roger D Johnson
Topic: 3164 Message: 3164

I just uploaded a batch of QSO's. It appears that LOTW has
not been updated in a while. Only one of my VU4 contacts is
recognized as Andamans, KH8SI is not recognized as Swains Is
and 4O3T is not recognized as Montenegro. Also, LOTW shows
I have 11,778 QSO's in the database while I show 11,988 in
my DX4Win log! I have no idea where the missing 210 QSO's
are!

I'd suggest you check you uploaded logs. If you sent the right ADIF country codes for your QSOs, LoTW would recognize them.

Many have valid LoTW QSLs for 4O6DX, Montenegro.

3166. RE: [ARRL-LOTW] LOTW progress

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-08-28 20:41:20 UTC
From: Joe Subich, W4TV
Topic: 3164 Message: 3166

Logbook of the World only identifies the country of the QSO
when it is matched. The country information comes from the
"certificate" used by the other station to "sign" his log
before uploading.

Until the KH8SI crew decides to upload their logs, your KH8SI
QSO will not show any country. The reason that one of your
VU4 QSOs shows "Andaman Island" is because the matching QSO
record has been uploaded.

As to missing QSOs, I would look at your log for QSOs with
invalid modes, missing/invalid information (date, band, etc.),
or illegal calls (WORD vs. W0RD, etc.). tQSL will not upload
QSOs that do not pass validation checks at signing time.

73,

... Joe, W4TV

3167. DXCCdata entry person errors

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-08-28 21:26:37 UTC
From: FireBrick
Topic: 3167 Message: 3167

Before the people at the DXCC desk throw a rock at me....I've found quite a few of my own errors this way. Marking the wrong qso as credited, which skewed my band totals. Actually messing up the callsign as compared to the card. So don't take this as a complaint.

With the aid of using LoTW's Awards module, you can now see all the callsigns, date, band, mode for each entity that you have both DXCC and Challenge credit for.
(I haven't gotten to checking WAS as yet).

I am finding some data entry errors on the part of the DXCC typists.
Usually minor things like transposing month/day
an occasional 10 meters/10 megs type thing.
Even a few were Callsigns were misread.
Not the Entity... but like W9OL would be entered W9LO.

So far, I've not found anything like a mode error, but I've got about 2K worth of entries to check yet.

I did find out that prior to 1998, the year of the qso was entered but not the date. Then the newer software filled in the missing month/day with a default 01/01. This is of no consequence really.

The whole point of this is....when you get cards back, it's a lot easier to just check those against the files in LoTW than to wait till you see a problem and have to wade through hundreds..

3168. LOTW User Number Increases

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-08-29 15:53:59 UTC
From: Bill
Topic: 3168 Message: 3168

As many know HB9BZA and I have been keeping up a list of known LOTW users for about a year and a half. The numbers have increased continuously since the start, currently 13285 users with logs from 298 countries. This week, a significantly higher number of new users were identified (147 US callsigns in four days). A lot of these new users' callsigns are familiar to me as DXers. I feel the reason is that 406DX put his logs on LOTW and is giving many DXers their first confirmation for Montenegro. Even with direct QSLs showing up for other Montenegro QSOs, the effect of LOTW submissions is significant. We can only hope that other DX callsigns and more of those working the contests this fall will upload their logs to LOTW, which should really boost the number of users. WE NEED MORE LOTWREPORT.ADI files to identify new users. Send files to bb@... or to HB9BZA.

The user list only identifies those users that have provided an LOTW QSL to another LOTW user that then submits his LOTWREPORT.ADI file to either me or HB9BZA for processing and addition to the list. From the LOTW website, a user can request a LOTWREPORT be generated and downloaded to his computer, which then may be forwarded to us for inclusion of any newly identified users in the listing. Some logging software uses the database they I keep up-to-date to identify spots from packetclusters and web TELNET DXClusters. DXLAB's SPOTCOLLECTOR is one of those programs that use the list. The purpose is the identification is to know which spots have a higher probability of producing a LOTW QSL (valid for DXCC).

If you want to use the list, but don't using logging software, see the FREE LOTW User Query program, with updatable database file at www.bbcyber.com . Also, a link to a free searchable database on the internet is available from the same website.

3169. LotW renewal problem

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-08-30 16:04:05 UTC
From: Dave Bernstein
Topic: 3169 Message: 3169

I've heard from several LotW users that the certificate renewal process is flawed, so when I received email from the ARRL last night informing me that my certificate was about to expire, I scrupulously followed the instructions on the ARRL web site. Everything went well until I processed the renewed certificate that arrived by email this morning. The renewal web site says

"When your renewal .tq6 file is returned and loaded, the red circle/bar will go away as will the original certificate, leaving only your renewed certificate."

In my case, the original certificate did not "go away". TQSLCert now displays two identical "AA6YQ - UNITED STATES OF AMERICA" entries. Right-clicking and selecting Properties reveals that one is the certificate that expires next month, and the other is the renewed certificate.

Is this a defect in TQSLCert, or an error in the procedure described on the web site?

What's the workaround?

73,

Dave, AA6YQ

Hello Dave,

Dave, read this

Jul 6, 2006: Renewing a Certificate leaves the Old Certificate also --
Here's a hint involved with your current renewals. When using the
latest version of TQSL software (tqsl-111), you must manually remove
your old certificate/private key combo, after renewing. Using this
version, the old certificate is not automatically removed upon
successfully loading the new .tq6 certificate file. To remove the old
certificate, right-click on a certificate with your callsign and
select "Properties" from the box. Check the serial number and the
expiration date. After you find the old certificate, right-click on
that cert and select "Delete" from the box. This is a good time to
SAVE your cert/private key combo. In TQSLCert, right-click on the line
with the callsign of interest and select "Save" from the box. Select a
destination and click save. Keep the resulting <callsign>.p12 file in
a safe place. Loading this file is the only way to recover from a
crash or move to a new machine.

Are you running TQSLCert version 1.11, Rod? Art's message implies
that TQSLCert's failure to delete the old certificate is unique to
that release.

3173. LOTW User Number Increases

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-08-30 17:31:54 UTC
From: py2xb@integral.com.br
Topic: 3168 Message: 3173

Bill, I would like to share why I have finally adopted LoTw. Perhaps it can help to bring other users who may be in a similar situation.

I have received LoTw certificates that have expired and I have never really made the move to adopt LoTw. The idea to use LoTw did not seemed right, mostly because I was worried about the sensation of loss of not receiving paper qsl cards. I still have a great pleasure when opening an envelope and look at a new QSL card that just arrived. Also, when a pile of cards comes from the bureau, it gives me a lot of pleasure.

I have a straight criteria to send qsl cards via de Bureau to every new band/mode QSO. After logging over 50K qsos (contests not included) I changed this criteria because the time needed to accomplish the task and also because the money involved. Actually I will abandon this way of qsling very shortly. I will only reply cards received via bureau or direct.

So, I needed to face LoTw. After all, the world is becoming electronic and on-line. I have been using electronic logs since 1993 and I have not lost the pleasure of logging contacts. I have been using Internet since it was available without loosing the pleasure of reading a book or the latest news. I have been booking flights and making hotel reservations online, without loosing the pleasure of traveling. So, why it would be different with LoTw?

One should know that foreign hams must mail a proof of license to ARRL to conclude the primary certificate submission. After understanding the security schema and passing thru the first steps of the system, one will definitely find pleasure on using it. The software is well done and so far all I used worked extremely well. After updating the log, 3K5 QSLs appeared instantly. Then, new qsls arrive every day. Very similar pleasure!

Needless to say that the submission method of DXCC QSLs are more efficient and straight forward. All is there. Information of cards checked per band or mode can be seen instantly. New pleasure!

The side effect is that I will have more time to do other things and it is likely that I will spend less money. My commitment to other hams to qsl all qsos remains. It is now more efficient.

I strongly suggest to all who are hesitating to do the final step to use LoTw, to do it. Fun is guaranteed.

Are you saying that after performing a "Load Certificate" on the
newly arrived .tq6 file, your old certificate remains visible in
TQSLCert -- but with a red circle?

Mine remained visible, but the red circle dissappeared.

Are you running TQSLCert version 1.11, Gerry?

I have tQSL version 1.11
and my 'old, but not yet expired certificates' had to be deleted manually when I renewed ahead of the deadline last month.

and I wish the LoTW authors would make the new certificates at least appear in a different form or show their new expiry dates.

I inadvertently deleted the wrong one, but fortunately had saved the p12 file and could easily reinstall.

I found that for each of my 12 calls, the expiry order was random.
the old cert would be first for one call and maybe not for the other.

So a nice feature would be (for me)
(icon) W9OL - USA Aug-1-2006
(icon) W9OL - USA Aug-1-2009

(yes all my new certs were for 3 years)

Now all I have to do is outlive my certificates. <wink>

Thanks Hans.

So there's a defect in TQSLCert 1.11 and there's a workaround for this defect, but the workaround is referred to as a "hint", and does not appear in the renewal instructions at the URL to which users are directed by the "you must renew" email from the ARRL.

Instead, this "hint" is presented as the 10th item in a list of 34 in the "News and Notes" section of the "Logbook User's Home Page". I wonder where else we should be searching for clues; is there a secret LotW video on YouTube?

I understand that LotW is seriously under-staffed, but surely someone there can take 5 minutes to update the renewal instructions web page.

Even better would be to correct the defect in TQSLCert, as I'm sure that some percentage of users indadvertently delete their new certificate rather than their old one when attempting to apply the workaround.

Hint: the use of a software application should not be thought of as a game in which users must seek clues and hints in order to achieve their objectives. This is not a foxhunt.

Dave,

The "red circle" is actually the circle with diagonal bar which shows
that entry is "not valid." It appears on the "renewal request" until
the new certificate is received from ARRL and loaded.

In truth, tQSL should be able to keep both he old and new certificate
available until the old certificate actually expires ... at that time
the OLD certificate should display with the circle and bar as an
indication that it can be deleted. I have left a old (unrenewed)
certificate long enough to see what will happen.

Dave
Can you give me the link to that "News and Notes" section of the "Logbook User's Home Page".

I must be searching on the wrong thing.

3185. RE: [ARRL-LOTW] Re: LotW renewal problem

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-08-30 20:10:10 UTC
From: Joe Subich, W4TV
Topic: 3169 Message: 3185

Further to my last post ... Dave's question caused me to check my own
certificates. Surprise - they all expire on Friday!

I immediately uploaded certificate renewals and had the new certificates
within an hour. They were loaded into tQSL Cert which resulted in two
visible certificates for each call. On a chance, I adjusted the clock
in my computer to Saturday and restarted tQSL Cert...

Another surprise! The old ("expired") certificates were no longer visible
in tQSL Cert. I then opened tQSL, found an old *.adi file and proceeded
to sign it using the new/renewed certificate (and Saturday's date).

In essence, when one renews a certificate, tQSL and tQSL Cert will have
two valid certificates for the period of time between receipt of the new
certificate and the expiration of the old certificate. The old certificate
will "self destruct" automatically at expiration with no need for any user
intervention. This is the safest way for the system to behave ...

It would be nice if the instructions were updated to reflect the actual
behavior and note there is no need (other than a for cosmetic reasons) for
the user to actually delete the "old" certificate and risk deleting the
wrong
one.

I tried that and learned that as soon as you apply for and receive a new certificate, your old certificate is no longer accepted at LotW.

I complained to Wayne about the discrepancy between the instructions that come with the renewal letter (where it says the old certificate will automatically be deleted) and the information on the LotW page, where the info says to be aware that the old certificate will not be deleted. He replied and told me that it was not a discrepancy, but just a difference in the way the versions of tQSL operate. If you have the older version, the old certificate is deleted upon renewal, if you have 1.11, it is not. So the instructions are kept for those who haven't updated to the latest version (even though there are displays all over the web site telling you to MAKE SURE you have the latest version).

It's not a huge deal, my recent renewal went like clockwork and I merely discarded the old certificate when it was complete.

3188. Cert renewal

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-09-05 18:05:55 UTC
From: Julio Peralta
Topic: 3188 Message: 3188

I just renewed 2 LOTW certificates. It only took several hours to get the new certificates back from the ARRL. Once I received them Using the instructions in the e-mail that accompanied the certificates I doubled clicked on the attached certificate and it self loaded in the TQSLcert program which removed the red circle with the line cert. I was then left with 2 W4HY cert's. I right clicked on both to determine which was the old one and deleted it. Done.

I then did a download of new QSL's and it works fine. BTW it is a 3 year cert.

Julio, W4HY

3189. Low Band ops use LoTW more

Yahoo group: ARRL-LOTW (2003 — 2007)

Sure would be nice if the Citrus Belt Amateur Radio Club, who is sponsoring the Rt. 66 Special Event each year, would join the LoTW and have their various RT 66 station submit their logs.

Save a lot of postage and time for all concerned.

I searched for an email for CBAC and was unlucky.

Anyone with an email for CBAC, please send it to me or forward this email.

In fact, LoTW would be perfect system for all Special Event operations.
A participant would still have to send in for the certificate, but the log checking would be so much easier.

If everything is coming your way then you're in the wrong lane.

Nuts! The only problem we programmers have is allowing others to use our code. Up to that point life is a bed of roses.

BTW: Old programmers never die; they just decompile.

The second cert is not the only requirement. The log adi file must be run thru TQSL with the old call's cert selected. This "signs" the log adi file with the proper call. I think that LOTW will have a problem with the file if the log is "signed" with one call and the station call in the log doesn't agree with it.

I might suggest that you try DX Keeper (from DX Lab Suite) as a logging program. It automates alot of the steps in submitting to LotW and it is free. It also has other intersting program modules which are quite nice and free. Check the reviews on Eham or just download and try it.

Regards Ed KE3D

TG9AKH 2006-09-30 23:10:10 12M RTTY 24.92158 GUATEMALA

This new band/mode confirmation actually beat the elaped time between
working and confirmation for the SV8 station by a few minutes.

Nice to see more dx stations taking part in LoTW.
It does seem that rtty/digital stations are more likely to be utilzing LoTW
more than cw/ssb stations.
Probably becuase the data modes operators are more likely to be computer
driven.

Regardless, that's two more band/mode I don't have to spend money/time
trying to get confirmed.

My thanks to Spiros and Mario for the qsos and LoTW qsls.

All great discoveries are made by mistake.

Certainly does. I've got 9 QSLs for the CQWW RTTY contest last weekend -
and I only made 47 contacts. Three of those QSLs were instant when I
uploaded my log the morning after the contest, and the others have
trickled in over the weekend.

No new ones for me among those though (yet).

I have noticed the same trend. I made 316 Q's in
last weekend's CQWW RTTY and within an hour,
I received 35 QSLs. Just checked, a few minutes
ago, and now have 72 QSLs. There were 10 new
ones among them, but then I just got on RTTY
in February, 2006.

Hi Guys:
I just got on RTTY for the first time in 25 years last night using MMTTY and a TS820S.
Sure beats those old Mod 14's, 15's, 28's except for the smell of the old oiled paper tape.
Maybe GLADE can come up with one of those Plug-In's "Essence of RTTY Shack" sounds good to me.

I made 3 QSO's on 80M between 0247Z and 0332Z. I uploaded them to LoTW.
When I came back 30 min. latter I had 2 of the 3 QSO's confirmed.

9 Hrs. and 12 Min. between QSO and LoTW QSL Confirmation !!!
That's pretty fast service in my book !!!

I just checked LoTW's "Find Call" and the unconfirmed station has never submitted a Log to LoTW
so I guess the score will be 2 for 3 (unless he gets "LoTW Religion" :-)) !!!

I do not know if the ARRL entertain LOTW feature requests, but I would like to be able to download the DXCC Award Credit Matrix onto my PC. At the moment I believe that you can only "View" the Award Credit Matrix. Personally I would like to be able to download it into a spreadsheet so I can compare the results with my records.

Hi Peter -- yes, you may print it now. Just go into the credit matrix on
LoTW and call it up on the screen as usual and then click on File on
your computer and print that file. It takes a few seconds to load
because it is large but I have printed it several times.

Peter
I think you can already do that.
Maybe not as a data file but as a readable/printable file.
Go to Awards>Account Status>
at the bottom of the page is
View Award Credit Matrix

Then using your Browsers File menu
Select 'Save As'
and make your choice

Also you can do that with the Challenge totals
If you wish to see 'which' qso was used by ARRL to credit you with a band challenge credit.
(I was able to save this and then print it out on 8.5x14 inch paper)

Pete,

You can select the part you want by dragging your cursor across it, then copy the selection (Ctrl-C) and paste it (Ctrl-V) into an empty spreadsheet. It just takes a bit of formatting afterwards.

Easiest way - as mentioned here - is to Save the page, then print at
your leisure - that way it formats ok. In fact it looks as if it was
designed to be handled that way, as when I do it, it doesn't pick up
anything extraneous - just the tables. Full print runs to 10 pages
[all entities]

Indeed. I use a printout of the Award Matrix as a substitute for the ARRL
DXCC List. This shows what's done in LOTW, and then I pencil in what I have
in paper cards.

Peter G3ZSS,

As you will have already seen, it is possible. I usually just highlight the table, click on COPY, open Excel, and then paste it directly into a spreadsheet. I have never had a formatting problem, other than unwanted columns for 6m, SSB etc etc.

From: R Johnson
Topic: 3201 Message: 3210

Hi:
I can't find "View Award Credit Matrix" at the bottom of the page to "Click On".

Here is what I interpreted from your message:
1) Log on to LoTW
2) Select "Awards"
3) Select "DXCC"

At this point LoTW "Defaults to "Account Status" and I can't find anything
at the bottom of the page that says "View Award Credit Matrix".

What am I doing wrong ???

Any help will be greatly appreciated.

You should see on the left side of the page, a "pull-down" box that sez "Select DXCC Award Account". Select your call. If you're just starting (one award account callsign), you can just click on the button below the box (the select dxcc award account button.). If you hit the underlined DXCC in the center (under the "About Award Accounts), you woudn't get anywhere.

Does this help? Regards Ed KE3D

Awards>Select DXCC Award Account>
That should bring you to the Account Status screen which shows LoTW qsls, What you have Awarded and the Totl/Current
Mixed
CW Phone
RTTY
bands
etc.

Right below the bottom of this grid is a Blue (on my machine) link called
View Award Credit Matix
(it is underlined, as it's a link)
Double clicking on that link will give you the DXCC Award Credit Report
The same one you get back from DXCC Desk when your cards are returned.

If you had selected one of the Awards from the grid, such as Challenge.

It will take you to another screen called Account Credits
in the box is Challenge and it wants to know if you want to see your Challenge credits by Name of Prefix
and if you only want to see 'Pending, all credits, or all entities'
Once that comes up...showing all your Challenge credits, going to File and save as will save your data to a file for future use or printing.

Those OPs down there at HC8N are incredible. Was a thrill to
work them on 40. The fast LOTW QSL was icing on the cake.

Tnx also to Corliss AL1G and LR6H for the new ones. Crossing
my fingers that P40KM will get on LOTW (hopeful, since W4GKM
is active on LOTW.)

RTTY contests are the best for LOTW percentages. I've gotten
64 QSLed so far out of 155 (41%). I think it approaches 50%
long term.

LOL
Hmmmm, if you have never submitted cards for DXCC, then it would be very likely that they wouldn't have any 'credits' in the file for you.

Just wild a.. guess that you haven't submitted any LoTW qsls for credit either.:-)

I think that just may be the problem.

Have you applied for and gotten any DXCC award (mixed , cw, phone, digital, etc.)? If you don't have any award then you will not have any DXCC account and will not have any award matrix showm.

Regards Ed KE3D

Hi Ed:
You solved the problem for me.

I have never applied for any DXCC Award.

It sure would be nice if LoTW could provide the Matrix for those
working on their DXCC and 5BDXCC, but haven't applied yet.

I don't see what the difference is between "Applied and Non-Applied" makes.

I just applied for RTTY & Mixed DXCC with 100 LOTW confirmed QSOs and no cards. (I must say that the application process is fast and easy.)

Does anyone have any knowledge of what the processing time for an LOTW only DXCC application might be?

I could speculate that it would take just as long as any other application or I could speculate that it would be handled more quickly but does any one here have any direct experience?

My last LoTW only submission on Aug 8th 2006 was credited the same day.
They were the new Montenegro qsls.

I don't know if this will matter but I had made many other submissions prior to this.
Both Dual (hardcards and LoTW) and Lotw only so I was in the 'system'.

Good luck

LotW will automatically choose confrimed QSOs which cause progress toward the various DXCC awards. While this choice can be overriden, LotW has no criteria to choose with whne there is no DXCC account existing in its system. You can view the confirmed QSLs in the LotQ system. I believe you can select QSOs, but I don't think that it will remember the selections when you don't have a DXCC account. It gors back to award progress.

One caution is that you need to understand what awards you can apply for. For example: If you have a QSO on 40mtrs with North Korea (P5 don't we wish), that band is done for band purposes (not for the challenge award). If the QSO was on RTTY, you might want a CW or Phone QSO confirmed. But unless you have those awards (CW, SSB, Digital), getting another mode confirmation on 40 is a waste of money. Of course with P5 maybe not! But the point is LotW makes it easy by preselecting QSOs that would advance you toward the various awards. If you had CW, RTTY, and Phone QSLS from say VP2V, you don't really need any more unless you are chasing multi-band DXCCs. Read the rules and you'll see what I mean.

I hope you're ready for that first submission soon! I do DXCC field checking here in central texas. If you can't find your closest checker drop me an email, and I'll help you get ready and figure out what to do.

From: FireBrick
Topic: 3224 Message: 3224

Presently, the qso/qsl totals that appear in the upper right corner of the 'Your QSOs' screen show an aggregate totals.

Between my own calls, and the stations I manage, the totals are meaningless to me.
It would be nice to have them reflect ONLY the callsign selected in the 'Your call sign: drop down box.

Please and thank you

3225. Upload from DXKeeper causes LOTW server to crash?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-10-12 18:22:06 UTC
From: Ron / Suzette Novak
Topic: 3225 Message: 3225

I've been trying to synch up my LOTW, DXKeeper and EQSL logs. I've noticed that the last 4 or 5 times I've upload all entries from DXKeeper to LOTW the LOTW server went down for over 30 minutes. Being a retired IT manager the logical conclusion I draw is there's a connection between my upload and the LOTW server going off-line.

I inspected my adif and could only find 1 obvious problem. There was a QSO for a SWL that got into DXK from EQSL. I deleted this entry in the log, resent and still the LOTW server went off-line seconds later.

I won't upload my entire log anymore and have saved my last adif. If anyone has a suggestion or wants more info let me know.

Why are you uploading your entire log? The only thing you should have
to do is to upload new or updated QSOs, not all of them. I'm sure that
DXKeeper has a way to flag QSOs as already uploaded.

However, I'd suggest that you send an e-mail to lotw-help@...
describing the problem you've seen. If there's a bug that you're
triggering I'm sure they'd like to know about it.

3227. Re: Upload from DXKeeper causes LOTW server to crash?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-10-13 14:03:41 UTC
From: edctexas
Topic: 3225 Message: 3227

DX Keeper uploads by selecting LOTW and then doing an "Add Requested". The Add Requested only selects those QSOs which do not have "R" in the LotW sent box (meaning QSL requested). Once the "R" is there DXK will not unload the QSO again. The next step is to "Sync LotW QSOs". This button requests LotW to download a file with the QSOs that were recently uploaded. DXK marks the log with LotW Sent = "Y" and Lotw Rcvd = "R". This is insuring that there is a LotW record matching your log. Then periodically you check for QSLs with the "Synch QSLs" button. This downloads any QSLs (matched records) and marks your log with LotW Rcvd = "Y".

Manually log into LotW and check to see if you have really uploaded duplicate entries. If you have please get on the DX Lab yahoo group and ask Dave for help. DXK is designed NOT to do duplicate uploads. It is extremely unlikely that your DXK upload is "crashing" LotW. There are periodic maintenance intervals where LotW goes offline. There also intervals (primarily after contests) where LotW seems broken. If there is a problem with LotW, DXK should report an error message to you. So if you still think there is a problem, please get on the DX lab yahoo group and ask.

Regards Ed KE3D (very happy DXK user and fairly happy LotW User)

Anytime you can't get to a web site, you might try the following in a DOS command window on windows

tracert <hostname>

or linux/unix

traceroute <hostname>

to see how far the network lets you go. Remember that the internet is not a direct connection. There are routers and network segments in between, and in many cases, there are multiple routes that can absorb failure of other routes. But, sometimes failure modes don't allow for instance recovery, and someone has to go "push a button" somewhere.

If you do the above, when it is working, you'll have a reference point to compare to, and you'll be able to see when the path changes, or when a particular segment of your path to that host is having problems.

Gregg Wonderly

It's still down from here (bellsouth.net). www.arrl.org is just
fine but any of the LotW links die a horrible death.

Tracert p1k.arrl.org:

Tracing route to p1k.arrl.org [69.0.106.201]
over a maximum of 30 hops:

1 15 ms 14 ms 14 ms 68.216.193.9
2 15 ms 14 ms 14 ms 68.216.193.61
3 49 ms 49 ms 49 ms 205.152.111.81
4 28 ms 29 ms 29 ms 65.83.237.140
5 51 ms 52 ms 55 ms 65.83.236.64
6 52 ms 52 ms 52 ms 65.83.237.206
7 77 ms 77 ms 77 ms ded2-g2-3-0.mrdnct.sbcglobal.net
[151.164.42.61]
8 76 ms 82 ms 84 ms Interbridge-Networking-1136726.cust.snet.net
[69.182.114.54]
9 * * * Request timed out.
10 87 ms 97 ms 109 ms 200.1.1.1
11 * * * Request timed out.
12 * * * Request timed out.
13 * * * Request timed out.
14 * * * Request timed out.
15 * *

Looks to me like an inter-network routing issue. If the ARRL staff are
monitoring, I would suggest that they talk with their provider to
find out what is out of whack in the routing tables.

73,

... Joe, W4TV

Must be just us Florida folks that are having trouble Joe. cox.net here
and it is still down. Thanks for the confirmation.

Topic: 3232 Message: 3242

Hamish,

Your path information shows difficulty between
Interbridge-Networking-1136726.cust.snet.net and p1k.arrl.net.
My information shows it dying at the same point.

I suggest there is a configuration issue at Interbridge--snet.net
that needs to be addressed.

While viewing my LoTW details I did a trace and after the Interbridge
line, the next hop was to p1k.arrl.org - 69.0.106.201

So near, yet so far. <smile>

OK Hamish, fine. I get as far as the Interbridge you show as number 14 and
then it falls apart.

So what does a dummy like me do to get it corrected ? Maybe another whiskey
and try again tomorrow ?

first it was just the SE that had internet problems.
Then you all started doing traceroute and you just
wiped me out completely....
Total internet down for me and just came back on.

LOL LOL
Please don't overload the DNS servers testing traceroutes again. :-)

But if you can just accomplish the same thing by overloading the SSB portion
of our hobby!!!! lol
As Martha used to say "That could be a GOOD Thing"!

3253. Re: [ARRL-LOTW] LOTW Still Down

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-10-19 17:09:17 UTC
From: Gerry
Topic: 3251 Message: 3253

Still fine here. I would suspect a DNS server in your ISP routing has lost the path. Often these heal themselves.

Hi Mike -- still down here in the Florida panhandle also. Been that way for several days. Many folks can't get in and many others having no trouble. It depends on the path. Several people have traced it out and it is failing in the same place for all of us.

This problem doesn't appear to be an ARRL issue. You should be contacting
your ISPs to report the routing failure.

From: Dave Bernstein
Topic: 3251 Message: 3256

If there's a DNS problem, using the following URL may help:

https://69.0.106.201/lotw/default

If your browser reports a certificate error, ignore it and proceed.

Gerry,

It is not a localized ISP issue. It is effecting users from
Central Florida to the west coast of the US.

The failing node is "one hop away" from p1k.arrl.org - HQ's
upstream provider. If this is going to be fixed, HQ staff
will need to get on the phone with their provider an make a
little noise.

Here are the two most likely contacts:

Bloom, Jon, KE3Z, Web & Software Development Manager ke3z@...
Mills, Wayne, N7NG, Membership Services Manager n7ng@...

Nonetheless, such problems are more likely to be solved if anyone affected talks to their network provider. Tracert only shows the path to the site - it could easily be the return path that is the problem and it is virtually certain that the return path is different than the forward path.

Been there, done that.

Joe,

If I can't connect to a known good site, I need only to contact my ISP and
they will take care of the downstream problems.

Weird phenomenon. I couldn't access LoTW from home, but I could from work. Looks like the problem wasn't with LoTW, but with some part of the internet in between.

It's apparently fixed now, as I can access LoTW from both places.

From: timgep
Topic: 3273 Message: 3273

I just thought of a feature for LOTW that would be helpful
for users.

When WAS is selected, and you click on the band, LOTW shows the
states that are confirmed. A nice feature would be to show
the states needed (not confirmed) at the bottom. I have
a logging program that does this, and it is a nice feature.

If you click "all entities", the report will show credited and needed states
(although not a separate list).

3276. LOTW QSL Rate nearing 12%

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-10-24 17:41:40 UTC
From: timgep
Topic: 3276 Message: 3276

I have another suggestion for LOTW, and it almost
falls in the marketing category.

On the Home page when you are logged into LOTW it shows the
box on the right with 110 million + QSO's and 6 million +
QSL's confirmed. For a while I was incorrectly calculating
a QSL rate of just under 6%. I thought a while - wait! For
every confirmed QSL, there are effectively 2 QSL's generated,
which doubles the rate to nearly 12%. I think it would be good to
show a QSL rate in that box, so that it gives a more accurate
representation of what is going on?

I think this rate would be good to show people on the LOTW
home page for users who aren't signed up yet. Its an impressive
number that is going to get even better with time.

Tim K6GEP

In addition to the "all entities" selection, you can also press the
"Application" menu item, and it will show the states you are missing
to receive each award.

From: Beischel
Topic: 3278 Message: 3278

Hey folks, anyone out there help me with TQSL on a Linux install? I downloaded the app and installed it, but I cannot find a way to load the existing certificate file I have. There is no selection in the app to load the existing certificate.

Thanks,

Duffy

You have to run tqslcert to do certificate management. Then you should
be able to load your file (.p12 or .tq5/.tq6).

3280. Quick results

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-11-06 20:59:36 UTC
From: K0HB
Topic: 3280 Message: 3280

Participated in the CW SS this weekend with the crew at N0RT, working 971 stations.
Submitted my log last evening, and we already have about 100 QSL's at LoTW. Not bad!

Hello,
What does most peoples put in their logs....when working 10/15 and 20 meters......do U use SSB or Phone?
Not sure which would be correct ......Does it make a differents in getting the LOTW award?

3285. New Call help setting up needed

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-11-09 14:00:08 UTC
From: Chuck R
Topic: 3285 Message: 3285

I have been using LOTW and everything is working really well. I have it interfaced with my logging program and I am very very pleased. BUT. I just got a new vanity call and need to set things up for that new call. Let me say that I really need detailed directions because I am a computer dummy. I do NOT have email capability on the ham radio computer so if email is involved I will have to burn a disk and load it onto the ham radio computer. I am so afraid I will lose my existing QSO's or do something that will really screw things up and would really appreciate someone to take the time to provide me with very detailed instruction. I break out in a sweat just thinking about what I could foul up!!

Thanks,

Chuck Richards, W0WQ

3287. 4O6DX - Montenegro

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-11-15 06:33:29 UTC
From: kb2de
Topic: 3287 Message: 3287

I have a LOTW qsl with 4O6DX dated 18 August 2006. MY DXCC grid does not show Montenegro confirmed. It also does not show Montenegro in the pending new contries list under awards. Is this a problem with LOTW? or is it a problem with the person who uploaded the log? or is it a problem with the timing of the upload? 73, Peter

3288. Re: [ARRL-LOTW] 4O6DX - Montenegro

Yahoo group: ARRL-LOTW (2003 — 2007)

From: alsopb
Topic: 3287 Message: 3288

Peter,

Montenegro shows up as a YU prefix in LOTW.
4O6DX LOTW credits also show up here.

If you don't have LOTW credits by now do some troubleshooting:
1) Were the credits really uploaded. You can look at your MY QSO's
area on the web page to see all QSO's you successfully uploaded.
2) A time mismatch of something like more than 30 minutes means you
won't get match in LOTW.

Yep. But twice a year is better than once. And there might be different
stations on in each. Well maybe I'll try a few calls anyway, perhaps
some people will help me out anyway.

Unfortunately, all the Maine stations I worked in the Sweepstakes CW
aren't on LOTW. In fact, I looked up all the SS results (CW & SSB)
from 2005 and NONE are on LOTW.

I think I will send an e-mail to K8PO in Maine and gently try to
plead the case to sign up on LOTW.

Wyoming is another tough one. Crossing my fingers for WG7Y to
do an upload to LOTW.

Try a sked with Pat, N7UVH. He is very active from ID, even digital.
I have him confirmed on PSK31, RTTY and SSB on LOTW.

Try a sked with Pat, N7UVH. He is very active from ID, even digital.
I have him confirmed on PSK31, RTTY and SSB on LOTW.

Out of 7 Q's with WC7S, I have 1 LoTW confirmation. I just sent Dale a message to see if he will be uploading other logs.

But this gave me the idea to see who else is "holding out" in WY that I can tweak for LoTW confirmations. I'm just shy of 40,000 QSO's online so 6BWAS shouldn't be too difficult!

I suspect a lot of fellows uploaded their logs without putting the State and County info into their TQSL certificate. Unfortunately these incomplete QSO records are not going to help with WAS.

Thanks for the lead!

From: timgep
Topic: 3302 Message: 3302

Before I write a couple of e-mails to Maine and Wyoming,
I thought I would bounce this idea off you all. We need
to think of what are the benefits there are for an avid contester in a
rare state to get on LOTW.

From what I could think of from the top of my head, I've come
up with:

Lower printing costs of QSL cards

Time saved in writing QSLs

Contest log checking before submitting log (ethically
a no-no?)

Very simple to send ADIF file in after contest.

Help represent your rare state on LOTW for the world.

Any others that you can think of?

Tim K6GEP

Actually, there's apparently quite a few fellows who don't upload
their logs to LoTW until after the log submission deadline for this
reason.

Frankly, I don't think this method makes a reliable check.

PARANOIA!

If an operator thinks others will use their log information to scrub their own log to climb the ladder of success, they're living in a fantasy world! Other than a review for obvious "typing busts", this is a total waste of time. These operators need to become more proficient during the event rather than try to play catch-up after the fact! Spend 15 minutes with Super Morse each day and your time will be better spent.

3306. More ND & WY confirmations (was: Looking for Sked...)

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-11-21 19:28:46 UTC
From: Robert Chudek - KØRC
Topic: 3306 Message: 3306

Change of topic and follow up...

I sent out a few emails for my unconfirmed ND and WY contacts for LoTW WAS. In every case I have received a prompt reply!

I am sure many of you have worked Bill Straw, WBØO, for a North Dakota contact. For those who do not know, Bill has retired to Tucson, AZ and now operates with the KO7AA callsign. He has been an avid contester for many years, even prior to LoTW. The bummer is, he lost many contest logs in a computer crash several years ago.

The interesting part of his story is the ARRL asked him if they could upload his submitted SS and DX contest logs, which he gave permission. I will make an inquiry to the LoTW Desk to see if this was every done. I am speculating it has not been done yet or I would have my ND confirmations with WBØO that I am investigating.

Bob Davis, WG7Y, also lost a years worth of logs to a computer crash. He confirmed several of my contacts and will upload this information to LoTW.

Dale Putnam, WC7S, has been manually matching QSO requests as they come in. He has tried uploading logs but has run into some difficulties. I offered my help, told him about this group, and also said the LoTW help desk is another good resource (according to feedback in this reflector).

So... overall, what can we "take away" from my experience? (Man, those corporate buzz words sound so distant now that I've left the race!)

1) Backup your computer... It will crash.
2) LoTW is not a "piece of cake" for everyone out there.
3) QSLing is not a high priority for many operators.
4) Maybe YOU should take an active role to help one person get through the LoTW process.

Unfortunately, all the Maine stations I worked in the Sweepstakes CW
aren't on LOTW. In fact, I looked up all the SS results (CW & SSB)
from 2005 and NONE are on LOTW.

I think I will send an e-mail to K8PO in Maine and gently try to
plead the case to sign up on LOTW.

Wyoming is another tough one. Crossing my fingers for WG7Y to
do an upload to LOTW.

I have confirmations from WB0O from November 2001 for SS CW and
Phone. Out of all the dozens of contacts I've had with Bill, that's
the only two that are confirmed.

Today I received the status regarding the WBØO logs for North Dakota in LoTW. Here's part of the message I received from David Patton, NN1N, at the ARRL...

"Hi Bob!

Hope you are doing well.

The logs we found for WB0O were obtained from the ARRL master database of contest logs--mostly SS and I think 10 meter logs.

As you know Bill lost over 100,000 QSOs that weren't backed up from his computer.

So, that's all we have, sorry."

Moral of the story, make backups of your computer data! If you have confirmations from WBØO in LoTW, they are most likely from this recovery effort by the ARRL staff.

This topic rose in the DX-QSL net once. The consensus was, the band's habitat is rather small (antennae restrictions, etc) and virtually every participant is rather unique, therefore:
1. $$$ collectors want to maintain their harvest on paper cards
2. DXCC Challenge 2000 up'ers don't want competition to reach their own level.

Pitty but it might be true.

Topic: 3314 Message: 3314

I am attempting to secure a 5BWAS and am completely frustrated with securing confirmation of South Carolina. Are there no hams in SC that use LOTW? I've got SC on all bands many-many times. And still no confirms.

With 49 states on 80, 40, 20, 15 and missing SC in each, I must assume SC hams do not use computers? Obviously I'm kidding.

Is there any LOTW user in SC that would arrange a sched with me so I can finish my 5BWAS quest?

Thanks

3315. why you don't get State and County info answer

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-11-28 18:10:49 UTC
From: FireBrick
Topic: 3315 Message: 3315

A very poor design of the 'signing process' where you enter the station location info, causes many to FORGET to include the state and county of the qsos.

Even though there is sufficient room in the Edit Station Location screen for two extra input lines, you MUST click on Next to access that page.

Consequently many people miss it.
Especially rovers during QSO Parties.

So you very well MAY have worked many South Carolina stations who submitted LoTW qsos, possibly they forgot to include the State and County into the info prior to signing the logs.

This is evident when you examine qsls in the Your QSL Page.
Some have the info, but many do not, makeing those qsls virtually useless.

So there should be two issues, for USA/VE stations, the State/County data entry should be on the same page as the ITU, CQ, and IOTA entry fields.
and
There should be error checking to advise signers that they have left fields blank.

There presently is no connection for County hunters, Nor for the Worked all Canada awards.
So possibly the design was intentional.

But then....seeing as how many of the ARRL staff do not even qsl via LoTW, I guess maybe ..... well I'll let you fill in the rest of that sentence.

I don't approve of political jokes...I've seen too many of them get elected.

Ford,

There SC stations show up here confirmed via LOTW
AD4AA, AA4V, K4KXO, W4UK, K4ADI, K4CNW, W4FDU, AA4SC, K0COP, NU4SC,
AF4OX, W4NE

Perhaps one of them will sked you.

Topic: 3315 Message: 3318

Right on, Bill!!!

And hello Ford!!! Where have you been? I've missed your posts the past 6 months or so.

I'm in the same position with WY and ND contacts, but in my case I have 11 "holes" I'm trying to fill with just those two states.

From this QTH in the past 11 years I have most likely worked all states fifty times over. I feel LoTW was designed as a DXCC tool and I think the WAS aspect was an after-thought. In any case, you would think a programmer could "fix up" the TQSL tool and make it more user friendly as Bill suggested.

I also think the bigger problem are users that are not aware they can/should add state info into the TQSL process. I'm afraid they set it up once and after that, their logging program buffers them from any direct interaction with the utility.

In order to capture these users and their missing data, the LoTW server would also need to be updated to scan the incoming logs for state information and issue a warning or email message back to the user. An alternative would be to update TQSL.EXE again and make it a mandatory upgrade by a certain date in the future.

These comments are free... if you want my 2? opinion, that will cost you. PayPal accepted. :-)

73 de Bob - K?RC in MN

(BTW Ford, you won't sleep as comfortable if you go the "make a sked" route! You might as well check into a net... "Please copy..."! Swing you beam SE, get on 15 or 20 meter SSB and call CQ South Carolina and keep working stations until you find an active LoTW participant! That's what ham radio is all about!)

Hello Bob
I don't know if WAS was an 'afterthought'.
It took long enough to implement.
But maybe it was just assumed that people would read the instructions.

It is a bit cumbersome, for qso party participants to submit logs.
Rovers would have to carefully separate each log segment and upload each
separately.
W9OL/M from Kane, Cook, LaSalle etc. would each require a separate upload.
I think a lot of people just say 'not worth the effort'.
Probably the same people who don't reply to bureau/direct qsl requests
either.

You would think, that with the labor intensive/costly/ and inefficent old
qsl bureau system, the ARRL would be beating the drum in every QST issue to
get us to switch.

I understand the programmer time situation.
But .... years have passed, with little advancement of the system.
If your not moving foward, then your falling behind!

Bill,

Yeah, arriving at the scene only 6 months ago my perception is most likely "askew on the treadle"...

When I worked for Target Corp, they had a separate "Usability Lab" where new applications were setup and random users were selected from the workforce to "use" the software. Video was shot in order to review the interaction of software and user. I'm sure that's beyond the scope of the LoTW testing. And it's certainly easy to Monday morning quarterback an existing system.

I'm plugging away using the system. I am 90% satisfied with it's capabilities and performance. Actually I was surprised my CQWW upload processed VERY quickly when I sent it yesterday. I was expecting a long delay and had to do a double-take on my numbers because it was so fast!

>
> W9OL/M from Kane, Cook, LaSalle etc. would each require a
> separate upload.

You are being way too hard on the system ... with "paper" QSLs,
you would have to get out different cards (or check a separate
box, write a different QTH, etc.) for each different location.
The LotW system is absolutely no different in concept.

Could it be easier, perhaps. However, the ability exists in the
tQSL.dll for each QSO to be "signed" with a different 'station
location' and I think the smart programmers (like AA6YQ of DXLab
Suite) will eventually build that capability into their LotW
support.

> I think a lot of people just say 'not worth the effort'.
> Probably the same people who don't reply to bureau/direct qsl
> requests either.

That's the truth!

> You would think, that with the labor intensive/costly/ and
> inefficent old qsl bureau system, the ARRL would be beating
> the drum in every QST issue to get us to switch.

Except that the "bureau" system will not even handle US to US QSLs
(which it should, IMO).

Corliss, AL1G is active in most major contests, including
digital. RTTY Roundup is first weekend in Jan. There are
others on LOTW in Alaska like KL7DX.

For South Carolina, W4UK is on most RTTY contests.

As has been said here before, RTTY contesters are avid
LOTW QSLers. Often get over 50% of my contest contacts
QSLed on LOTW.

Jun 2006 QST 79 In Brief: ARRL Executive Committee works through
wide-ranging agenda; Logbook of The World now supports Worked All States
Award
(Happenings)

I haven't been on it for very long, but it looks to me like WAS , while
maybe not an afterthought, has only recently been implemented.
Maybe it's time for a full-blown article on the merits of LoTW for use
with WAS as well as DX to be written up and placed in QST. Are there any
writers on the list? maybe a nice and easy, step-by-step painless
walkthough of the process to get started should be included.
I would of thought that PSK users would be a lot more active with
LoTW, guess I was wrong.

I'm not sure how they did it, but it appears that new QSO's were
uploaded with a French Polynesia certificate. The old Austral Is
ones are gone, and have been replaced by French Polynesia.

Vladimir VE3IAE

3341. Note to developers: single apostrophes in station_data

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2006-12-17 23:06:38 UTC
From: Dave Bernstein
Topic: 3341 Message: 3341

If your application invokes TQSL with a user-specified location_name parameter, and reads the station_data file created by TQSL in order to let the user select a valid location name, be aware that TQSL will replace each single apostrophe in the location name with the string

'

Thus the location name "St. John's" created in TQSL will actually appear in the station_data file as

<StationData name="St. John's">

Invoking TQSL with a location name of "St. John's" will fail; you must supply "St. John's" as the parameter.

From: R Johnson
Topic: 3343 Message: 3343

Hi all,

On Thursday, December 14, 2006, much to my regret, I delivered a letter of resignation to David Sumner, K1ZZ. Such an early departure had not been my plan but had become necessary. On Friday, in a meeting with Dave and Mr. Harold Kramer, ARRL Chief Operating Officer (COO), I made it clear, when asked, that my resignation was in no way a retirement. I also conveyed that it did not indicate any fundamental differences with ARRL outside of the jurisdiction of Mr. Kramer. I offered them the opportunity to release information about my resignation, but Mr. Kramer could send only a terse two-line message, and then only to the HQ Staff and the closed reflector of the ARRL Officers, Directors and Vice Directors, hence this message.

All in all, it's been a fun six and one-half years. The League has been a great place to work, and I□d do all but the last 22 months over again. I thank all of you around the World for your great support. In particular, I offer special thanks our volunteers - advisory committee members, log checkers and advisors. I also urge all of you to support the ARRL financially. Be sure to tell them what you want, though they don□t always ask. I hope to regenerate an active interest in Ham Radio back in Wyoming. Maybe there□ll be another DXpedition or two as well, and look for N7NG - Jackson Hole - to be an active Wyoming contributor to LoTW as long as it's in business.

I have a situation that I'm confused about. I changed my callsign to KN3A as of December 30. I requested a new certificate and received the kn3a.tq6 via e-mail today. When I double click on it, I get a message saying certificate or private key not found after I select the .tq6 file.

Any help will be appreciated. I hope I didn't delete a file somewhere that was needed.

>saying certificate or private key not found after I select the .tq6 file.

When you requested the new certificate using TQSLCert, you should have seen a new entry show up in TQSLCert for the KN3A callsign with a circled slash through the key icon. That icon means that the public key for that request has not yet been signed by LoTW. At that point there's still an important part of the process stored on your computer: the private key that corresponds to the LoTW certificate. (The private key is generated on your computer, and never leaves that computer - that's the basis for the security of the system.) LoTW doesn't ever have a copy of the private keys; that's why you're reminded to back up your keys at least each time they're renewed. All of this isn't important as long as you don't do anything to that partial request.

If you deleted the KN3A entry from TQSLcert after you generated the .tq5 request but before you get the certificate (.tq6 file) back from LoTW, you'll get the error message you describe. If that's what you've done, the .tq6 isn't usable. Delete it, generate a new certificate request, and don't delete the partial entry until LoTW returns your certificate.

Sometimes it takes a while for LoTW to respond to certificate requests as those are handled manually.

No, the password isn't the private key.

When you generate a certificate request from TQSLCert, it builds a pair of related keys (one called the private key, one called the public key). Those two have to be used as a pair. The private key stays on your computer and the public key is sent to TQSL. The error message indicates that the copy of the private key was deleted from the user's computer, or the .tq6 file was being restored on a different computer from the one that generated the original certificate request.

Rick,

Thanks for sending this directly to my private email as well as here.
Yes, the problem was the new entry with the circled slash through the
icon was there. Unfortunately, it was inadvertently deleted.
Apparently I had requested other certificates and never activated them
for old callsigns and when I was deleting them, accidentally killed
the new KN3A one. I did request a new one last night then.

Thanks to everyone for their replies.

>call sign? Give me a break!

False !!! They are currently renewed for 3 YEARS !!! I did my renewal in MAR 2006.

>LoTW needs to have certs that are at least good for as long as you are FCC
>licensed

Technically when you go SK, you are no longer licensed !!!

>and only need to be renewed once every ten years

Absolutely NOT !!!

You could have renewed your FCC License, your ARRL membership, and your LoTW certificates last week. This week you are 6 feet under ground !!!
One of your family members requests K1UQ as their callsign.

The FCC now grants the license as the law permits. Since no one notifies the ARRL that you are SK, they still think you are a still a member and your LoTW Certificates are good for 10 years (-1 week) unless you are an ARRL "Life Member", then this could go on for many more years depending on address changes !!!

Now your beneficiary shoots "The Golden BB" and gets DXCC, WAS, or VUCC that YOU worked for many years with JUST 1 QSO !!!

>AND then should be
>auto-renewed by the ARRL FOR AS LONG AS YOU ARE A PAID ARRL MEMBER.

You DON'T need to be an ARRL member to use LoTW !!!

Been dead all Sunday. Still dead.

Beg's the question:

Is there is anybody left at the ARRL who is skilled at bringing up
LOTW after a crash?

LOTW is frequently down on Sundays. Perhaps there is some kind of
backup or maintence activity then.

I'm beginning to think it died way before "Wayne left".
Going back on the Home page of LoTW, there has not been any major change to the program since Mar 11, 2005 when Version 1.11 was released.
Since then, a minor tweak here and there plus now certificates are for 3 year periods.

There has been so little advancement in LoTW features, that I can't help but believe the ARRL bosses have either abandoned the idea of pushed it back to the farthest burner.

I've been using since the beginning. I still suggest joining LoTW in my cw/rtty buffers, but have seen no advancement, promotion, or incentives to hams worldwide to join and take part.

And before anyone asks. I support dxpeditions, case in point, a recent major dxpedition that uploaded it's logs to LoTW received a donation from me and a note saying that they do not have to send me cards, the LoTW confirmation was sufficient.
I received an email from them saying they would apply the donation towards their next dxpedition.
That's the way the system SHOULD work.
ALL OF MY LOGS, AND ALL OF THE LOGS FOR THE STATIONS I SERVE AS QSL MANAGER FOR, are up to date on LoTW.

I see NO reason why cabrillo contest logs are not AUTOMATICALLY entered into LoTW after the log submission date has passed.

I have seen no recent mention of incorporation of other award programs into LoTW.
I'm not placing blame on the League or administration of the various other contest or award groups. I recently joined the 6 meter list and was amazed to find that very few 6 meter devotees even knew that LoTW was free and you didn't have to be a member of ARRL to take part.
I guess I can blame someone for not getting the word out.

Even though I have many qsos with various 'other' award programs, I'm not going to go through the effort of sorting and collecting qsl cards and then contributing fees in this day of computer logging and online submissions.
Worked all Counties is another example, I have boxes of qsls, online submission would be so much easier for most people.
Another example of poor education/promotion. Even QSO party participants don't know that you can submit the logs and indicate what county they were operating in.

Basically, I can't help believe that the promotion and wider use of LoTW for various award or contest groups wouldn't help expand participation.
we can moan about the declining numbers of Hams, but in this day of instant computer communication, we seem to be still stuck in the 'spark' mentality.

Ok, enough venting...
I'm a retired firefighter, still have my coat and boots so flame away.

From: timgep
Topic: 3360 Message: 3367

The LOTW website is up, but the log I submitted an hour ago is still
in the queue.

The LOTW webmaster put this notice up on LOTW. Seems that the
duplicate QSOs are still a big problem.

Processing Difficulties -- Logbook of the World was down for most of
Sunday and early Monday morning, January 8, 2007. One of difficulties
LoTW has experienced is that many people are submitting large numbers
of duplicate QSOs. Here is an example of a log for which processing
was just completed.

2007-01-08 16:47:49 LOTW_QSO: Successfully processed 14168 QSO
records in 4532.706650 seconds
2007-01-08 16:47:49 LOTW_QSO: 12848 records were duplicates
2007-01-08 16:47:49 LOTW_QSO: 738 QSL records entered
2007-01-08 16:47:49 LOTW_QSO: No errors encountered

This says that 14,168 Qs were submitted and 12,848 were duplicates, a
net of 1,320 Qs. It also says that Logbook took over one hour and
fifteen minutes to process this log. It would be very helpful if
everyone would learn to use the "date window" in TQSL to limit a full
log to only those QSOs made since the last submission. There is no
need to divide the log --simply set the window within which TQSL will
sign QSOs.

If you are using commercial logging software that doesn't select only
the latest QSOs, urge the vendor to fix it. If that doesn't work, try
to find new software. These duplicate QSOs are a drain on system
resources, and cause others' processing to be delayed.

Yes, I noticed that just before the end of the year and since, I've been receiving MANY duplicate LoTW qsls.

Some going back years.
I use DXBase, and I'm sure most other logging programs have a feature to only upload qso's made since the last upload.

While it doesn't cause any difficulty for me in downloading it sure seems to be a inefficent way to upload.

But, having said that. If you realize you did not have complete data in your previous upload such as county, grid, or incorrect cq/itu zones.
Then I'm glad you uploaded the corrected info.

The amount of love someone feels for you is inversely proportional to how much you love them.

Looks like it is all the way up now. My log got processed along
with all the others, and BAM! I have 25 more confirmed.

Last week I got a new country confirmed, thanks to LOTW.
The TZ5A dxpedition from Mali uploaded their logs. Many tnx!

Subject: LoTW

Is there a reason that your LoTW is not promoted more?
There it is, a great, free, fast, online QSL program, you do not need to be an ARRL member, just sitting there going to waste.
Maybe a better walk-though on the inital sign-up process so that it doesn't seem so overwhelming
would help. And maybe after the entry deadline of any contest, all cabrillo logs could be uploaded.
In any arcticles maybeinclude the cost-savings in cards, postage, and time for anyone trying for awards,
and how for those who are not interested in awards can help others who do, at no cost, and very very little
time by uploading there logs to LoTW. this could help encourage new hams who are starting out, and trying
for their first WAS!

3372. Processing difficulties

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-08 23:36:35 UTC
From: Dave Lindsay
Topic: 3372 Message: 3372

Regarding the note on LOTW site about processing difficulties, is there a way to edit out confirmed QSO's with a specific station?

If I work a contest I just upload my complete log. Now I know that I have W1*** already confirmed on 10, 15 & 20m on that mode so what is the point of confirming them again. I will end up with dozens of confirmations with the same station on the same band & mode. This is not an economic use of resources.

Apart from comparing the QSO's against a downloaded LOTW log file I can't see a way of quickly weeding them out.

Could LOTW delete duplicates like these?

That would probably be even less efficient... Not only would it need to process your dups, it would also have to remove them, using what remaining processing power LoTW has.

Probably best the way it is...

Thanks,
Dave

I don't think the problem is people sending in 1000 or so contest qsos.
I think the problem is people sending in 10K qsos once a month..
If once a year I uploaded my entire log set, that would be over 206K, of
which most would be dupes of those already submitted.

But I only upload, recent qsos, made since my last upload.
My average qso upload takes 1.540706 seconds.

That's a far cry from the person who uploaded dupes taking 4500 seconds.

3375. RE: [ARRL-LOTW] Processing difficulties

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-09 02:18:40 UTC
From: Neil Richardson
Topic: 3372 Message: 3375

Why do you upload your whole log. You only need to upload the contacts made since your last upload anything more is both a waste of bandwidth and of the LoTW server resources. Have a look on the first page of LoTW and there is statement about the recent time it was offline and excess loading of dupes was a big part of the reason, there is also a very good statement on what to do about it.

That would probably be even less efficient... Not only would it need to process your dups, it would also have to remove them, using what remaining processing power LoTW has.

Probably best the way it is...

Thanks,
Dave

Subject: [ARRL-LOTW] Processing difficulties

Regarding the note on LOTW site about processing difficulties, is there a way to edit
out confirmed QSO's with a specific station?

If I work a contest I just upload my complete log. Now I know that I have W1***
already confirmed on 10, 15 & 20m on that mode so what is the point of confirming
them again. I will end up with dozens of confirmations with the same station on the
same band & mode. This is not an economic use of resources.

Apart from comparing the QSO's against a downloaded LOTW log file I can't see a
way of quickly weeding them out.

Could LOTW delete duplicates like these?

3376. Re: LOtW Down?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-09 04:31:07 UTC
From: timgep
Topic: 3360 Message: 3376

I think LOTW has been queueing again for the last 4 hours or so.

I wish they would put some sort of indicator on the LOTW site
to indicate this. When I was new at LOTW a year or more ago,
I would have re-sent my log if nothing happened over the period
of an hour or so.

3378. Re: Processing difficulties

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-09 14:30:01 UTC
From: Dave Lindsay
Topic: 3372 Message: 3378

Thanks for the replies.

You misunderstand me Neil, I don't upload duplicate QSO's just new ones I have had. I do know that lots of QSO's with particular contesters are already confirmed & wondered if perhaps I could edit them out somehow.

As Dave, NK7Z said, it is probably more efficient just to leave them there & upload them.

In essence they are all different QSO's but duplicate QSL's.

It was just a thought.

It would help the PR of LOTW if they would share with us the problems that they are having. Even though we couldn't help directly it would help us understand and be supportive. As they say, in absence of facts from the source, we're left to draw our own (often wrong) conclusions.

I have no idea what is happening but I do have 25+ years experience in large data center operations, software development and IT management. Here's some things I can share based on my experience.

Submitting duplicate QSO's should not crash the system. File processing should be done in a batch process (x number at a time). Bigger files mean longer processing time per file and a greater delay between when you submit a file and when it is processed. If the user base of LOTW grows to a point where the average delay between submittial and processing is great (> 24 hours in my opinion) then the LOTW folks will need more hardware OR need to reduce the amount of work by stopping duplicate QSO submissions. It doesn't sound to me like we are at this point yet based on the average processing delay I have experienced.

A system goes off-line in 1 of 2 ways: Planned and unplanned (i.e. crash). Planned down time covers maintenance and testing activities of hardware and software. There are situations where it is determined that a planned down time is needed only 15 minutes from now. A planned or scheduled down time not communicated to the user however is seen as a system crash and can give an application a bad reputation.

It is possible to have a high availability 'APPLICATION' that never goes off-line but hardware always needs some scheduled down time. Thus unless you are going to the expense of extra hardware etc. there will always be some scheduled down time.

Unplanned down time has many causes. I could write a whole book on troubleshooting and diagnosing crashes - I made a career of it. The best I can offer here is there are many individual components that make up an application such as LOTW. The application, the database application, web servers, firewalls, various network components and even other unrelated applications that may be running on the same hardware. These work fine in isolation but when run together very strange things can happen. Tracking down these errors can take a lot of man hours, a lot of patience and a lot of luck.

Lastly, most 24x7 on-line applications are not staffed 24x7. It would not surprise me at all that only 1 or 2 people have any

operational responsibility - that is keeping the servers on-line (these are not the same as the software developers but can be for small applications). Thus when there is a problem the 'on-call' person needs to be able to deal with the problem remotely and is usually limited to restarting the application. If it goes down again then it stays that way until everyone is back at work the next business day. Remember this is only a hobby for us users.

These are in no way the views of the LOTW team and I have no inside information. What I'm trying to say is we, the users, can be more understanding if more information is shared with us as to the challanges faced by the LOTW team.

It would help the PR of LOTW if they would share
with us the problems
that they are having. Even though we couldn't
help directly it would
help us understand and be supportive. As they
say, in absence of
facts from the source, we're left to draw our own
(often wrong)
conclusions.

I have no idea what is happening but I do have 25+
years experience
in large data center operations, software
development and IT
management. Here's some things I can share based
on my experience.

Submitting duplicate QSO's should not crash the system. File
processing should be done in a batch process (x number at a time).
Bigger files mean longer processing time per file and a greater delay
between when you submit a file and when it is processed. If the user
base of LOTW grows to a point where the average delay between
submittial and processing is great (> 24 hours in my opinion) then
the LOTW folks will need more hardware OR need to reduce the amount
of work by stopping duplicate QSO submissions. It doesn't sound to
me like we are at this point yet based on the average processing
delay I have experienced.

A system goes off-line in 1 of 2 ways: Planned and unplanned (i.e.
crash). Planned down time covers maintenance and testing activities
of hardware and software. There are situations where it is
determined that a planned down time is needed only 15 minutes from
now. A planned or scheduled down time not communicated to the user
however is seen as a system crash and can give an application a bad
reputation.

It is possible to have a high availability 'APPLICATION' that never
goes off-line but hardware always needs some scheduled down time.
Thus unless you are going to the expense of extra hardware etc. there
will always be some scheduled down time.

Unplanned down time has many causes. I could write a whole book on
troubleshooting and diagnosing crashes - I made a career of it. The
best I can offer here is there are many individual components that
make up an application such as LOTW. The application, the database
application, web servers, firewalls, various network components and

even other unrelated applications that may be
running on the same
hardware. These work fine in isolation but when
run together very
strange things can happen. Tracking down these
errors can take a lot
of man hours, a lot of patience and a lot of luck.

Lastly, most 24x7 on-line applications are not
staffed 24x7. It
would not surprise me at all that only 1 or 2
people have any
operational responsibility - that is keeping the
servers on-line
(these are not the same as the software developers
but can be for
small applications). Thus when there is a problem
the 'on-call'
person needs to be able to deal with the problem
remotely and is
usually limited to restarting the application. If
it goes down again
then it stays that way until everyone is back at
work the next
business day. Remember this is only a hobby for
us users.

These are in no way the views of the LOTW team and
I have no inside
information. What I'm trying to say is we, the
users, can be more
understanding if more information is shared with
us as to the
challanges faced by the LOTW team.

If you surfed over to www.arrl.org anytime today, you would have seen this posting...

Logbook of the World Server Temporary Outage (Jan 9, 2007) -- ARRL's Logbook of the World (LoTW) server will be off-line for several hours this evening while the power system at ARRL HQ is being worked on. LoTW service should resume at about 9:30 PM EST (0230 UTC, Jan 10).
Link to this story

I do agree the user base needs to be notified of planned outages. Certainly copying this message to the LoTW@yahoogroups.com newsgroup would have been a prudent step in better communication.

Both of these gentlemen are correct, based on my
hospital
computer network administration. When I was
"on-call", I
was expected to respond within 15 minutes and be
"on site"
within 30 minutes, and make sure the servers were
back on-line
ASAP!

It would help the PR of LOTW if they would share with us the problems
that they are having. Even though we couldn't help directly it would
help us understand and be supportive. As they say, in absence of
facts from the source, we're left to draw our own (often wrong)
conclusions.

I have no idea what is happening but I do have 25+ years experience
in large data center operations, software development and IT
management. Here's some things I can share based on my experience.

Submitting duplicate QSO's should not crash the system. File
processing should be done in a batch process (x number at a time).
Bigger files mean longer processing time per file and a greater delay
between when you submit a file and when it is processed. If the user
base of LOTW grows to a point where the average delay between
submittial and processing is great (> 24 hours in my opinion) then
the LOTW folks will need more hardware OR need to reduce the amount
of work by stopping duplicate QSO submissions. It doesn't sound to
me like we are at this point yet based on the average processing
delay I have experienced.

A system goes off-line in 1 of 2 ways: Planned and unplanned (i.e.
crash). Planned down time covers maintenance and testing activities
of hardware and software. There are situations where it is
determined that a planned down time is needed only 15 minutes from
now. A planned or scheduled down time not communicated to the user
however is seen as a system crash and can give an

application a bad
reputation.

It is possible to have a high availability
'APPLICATION' that never
goes off-line but hardware always needs some
scheduled down time.
Thus unless you are going to the expense of extra
hardware etc. there
will always be some scheduled down time.

Unplanned down time has many causes. I could
write a whole book on
troubleshooting and diagnosing crashes - I made a
career of it. The
best I can offer here is there are many individual
components that
make up an application such as LOTW. The
application, the database
application, web servers, firewalls, various
network components and
even other unrelated applications that may be
running on the same
hardware. These work fine in isolation but when
run together very
strange things can happen. Tracking down these
errors can take a lot
of man hours, a lot of patience and a lot of luck.

Lastly, most 24x7 on-line applications are not
staffed 24x7. It
would not surprise me at all that only 1 or 2
people have any
operational responsibility - that is keeping the
servers on-line
(these are not the same as the software developers
but can be for
small applications). Thus when there is a problem
the 'on-call'
person needs to be able to deal with the problem
remotely and is
usually limited to restarting the application. If
it goes down again
then it stays that way until everyone is back at
work the next
business day. Remember this is only a hobby for
us users.

These are in no way the views of the LOTW team and
I have no inside
information. What I'm trying to say is we, the

users, can be more
understanding if more information is shared with
us as to the
challanges faced by the LOTW team.

I think it is a good idea but, the way it is setup is a little frustrating to some of us. I been with eQSL and never had any issues and being authenticated and a supporting member makes it even more worth it. I have been going through my logs for almost two months trying repair it so it actually works but, I notices when I did try to upload my log from MixW and also my backup log ACLOG, there were some issues that are fine in the logs but get messed up with LOTW. I will keep trying but, I am not real impressed with it so far. I wish it was as easy as some are saying. Being a new member of ARRL makes me wonder if I made the correct choice using it. I don't need ARRL to ell me who I worked when I have the hard cards and authenticated cards from two other sources. That have never given me trouble. Rob n1zw

Rob,

Hang in there! Once you've uploaded all your logs...and filtered out
the inconsistencies, LOTW works like a charm. I've been using it
since its start-up and it does work! My initial log submission had
problems, which were caused by lousy log keeping on my part. The log
looked good in DX4WIN but LOTW was a bit more stingent.

EQsl is fun... but LOTW is the real thing. It was a long time in
coming..with multiple layers of security (a good thing these
days!)...now if they would only add WAC, IOTA and other awards!

Guess the development dollars are not there...

Just a comment on the LOTW 'up time' difficulties....
I was very surprised that the LOTW administrators chose to announce
that duplicate log entries brought the system down. Usually
administrators do not announce to the users about ways of breaking
the system. (Yes, there are some users would would deliberately break
the system if they knew how!)

A simple announcement that the user community should be careful when
submittiing their logs would have sufficed...as they re-programmed
LOTW to stop processing logs with more than "x" dups.

Thanks to the LOTW users...we've saved each other a lot of postage
and green stamps.

Another 2p worth from me

I am also with e-QSL but from my point of view LOTW is the real thing. Why should I have many hundreds of confirmations on e-QSL which don't count because the call signs are not registered with the system.

Any problems I have had in the past with LOTW were promptly dealt with by staff who put me right. These were problems caused by me not reading the instructions correctly. Since then I have had no problems at all.

So far I have 75 countries & 45 states confirmed using 5 watts. Yes, I know that LOTW doesn't discriminate between 5 & 500 watts, but I know. No paper or postage, what more can you wan't.

Who cares about the system going down some times. Are we all that desperate? ISP's go down on occasions & not just for maintenance.

As far as I am concerned LOTW is the way to go.

There is only one thing wrong with LoTW and that is the dismal and sorrowful lack of subscribers, I am still running at only around 5% confirmations.

With my logging program, LOGic 8 by PDA, it is simply a two or three click operation; in fact, it is so easy that I, a long time ago, decided to submit logs to eQSL as well, in order to satisfy those users (the eQSL tech help, by the way, is amazing & quick).

I upload on a regular basis; sad to say, my eQSL return is much better than on LoTW, the flagship.

Let's get everyone on the bandwagon, input those logs and stop complaining about the odd downtime; even my ISP has those.

3390. Re: [ARRL-LOTW] Again?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-10 17:06:56 UTC
From: Vladimir Sidorov
Topic: 3379 Message: 3390

Carl,

There is more to complain LoTW for. The worst things are, lack of good promo and lack of contacts with users. The lack of good LoTW ad has been discussed numerous times and wherever possible, so far with little results. As for the contacts with users, as it was mentionned here in the list several times since last afternoon, there is really very little info going out.

I would just wish the LoTW handlers to keep us all informed about possible upcoming unstabilities, planned shutdowns IN ADVANCE and right at the LoTW users' page... OK I have made some noise here in the list and apparently quite in vain... As it was pointed out, there was an announcement about the shutdown at the ARRL site. But I am a LoTW user. If I want to see my results updated, I just go to my "Favorites" in the browser and I am there... I simply don't browse through the whole ARRL site...
Then, if there are problems, why not to tell us all that there are problems?... Having known that, we shall quietly wait for them to settle. It is much worse TO SEE problems w/o any info from LoTW holders.

I am a sincere fan of the LoTW system and I am an active promoter of that. I personally keep some 70k QSOs there for 2 call-signs. Criticyzing the system somehow I only want to make it better.

Thanks for reading.

73,
Vladimir VE3IAE

Vlad,
Your so right.
LoTW had so much promise.
But the administrators have allocated (or didn't care enough) very little time/effort/promotion to it's users.
ESPECIALLY THE NON USA USERS.

I realize it is a bit more difficult for NON USA Hams to subscribe.
If I can figure that out....they should have been able to and should have created a Ombudsman type program for the various continents who could help or authorize membership.
There is already QSL Field Checkers, they could review a persons documentation and forward the data to the LoTW administrator.

The only thing that will make LoTW program a success....IS SUCCESS.
Make people WANT to take part.

All my logs, and the logs for stations I qsl manage are up to date on LoTW.

3393. RE: [ARRL-LOTW] Summary

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-10 19:48:45 UTC
From: Nenad Stevanovic
Topic: 3379 Message: 3393

"There is only one thing wrong with LoTW and that is the dismal and
sorrowful
lack of subscribers, I am still running at only around 5% confirmations.

73, Carl VE9OV"

Carl,

5% is expected percentage based upon QSL bureau
statistics:

a. Bureau requests result in 40-50% return after
12-24 months
b. Direct request result 70-80% return based upon
the quality of QSL info you use
c. You can not avoid QSL cards. Your bureau receives 5%
of your QSOs not matter if you claim them or not.

IN LoTW there are multiple aspects of the problem. As
technically inclined people we are frequently trapped and
impressed with technology, without taking into account
other important aspects:

- The service itself
- The profitability of such service.

The LoTW is originally designed as helper tool
for certain portfolio of awards, not as general
replacement of QSL service.

In its nature it is designed for 'direct users'
like yourself. Currently there is 15K such users.
At some point in time I tried to 'guesstimate' max
number of users. I landed at 70K users hypothetically
combining all DX-ers, and all contesters. I still
think it is too optimistic.

However, there is still half a million users out there,
who are not on the system, and their needs are not
addressed at all.

Other award portfolios are out of reach as well.

Consequently the service has to re-adjust itself if
it wants to survive. With current trend, people may
stop submitting.

The profitability is another important factor, since any service change need investment in development. Currently LoTW has low return on investment, because the 'direct sale' of matched records did not generate substantial revenue, as well as there was not indirect increase in alternate revenue streams (e.g. number of new awards, and endorsements has not risen dramatically).

Redefinition of the service is by far the most important task on hand. Technical implementation of changes comes next.

It is not really that hard for Non-US Amateurs to join up.
Photocopy of Licence and Photocopy of 'Photographic ID' sent by snail
mail to ARRL HQ
What might help is if those 'Copies' could be sent by [secure] e-mail.

Plus of course extra 'Awards' being added. I did think that IOTA was
on the cards, but reading now that IOTA are doing their own on-line
system sometime this year makes me wonder if that possibility has
fallen into a black hole.

The addition of WAS was great [where IS Hawaii ??<smile>] and if US
counties could be added ...wow !

Oh well, time will tell.

Some time ago I saw someone saying that CQ Awards were close to being implemented. WAZ and WPX would be great. Don't know the validity of that claim. Perhaps it fell through.

Unfortunately somebody summed it up in another context:

What if they gave a war and nobody came?

BTW: My hit rate is 14%. 18K QSL'S via LOTW.

To get a high hit rate, you have to operate in contests. Contesters already have computerized logs and generally don't want the paper QSLing chores.

A couple of years ago somebody from the IOTA big guys told me, they are
investigating joining the LoTW program. Nothing happened since. The own
on-line system means, there is no agreement reached or so...
Just checked the IOTA site, there is no news regarding the new system.
Nothing is the GB2RS News Headlines as well...

Graham, is it an official info or not yet?

To be honest, it would be nice to have a chance to apply on-line, as the
normal IOTA submission system is rather, eh, uneasy...

I have many, many IOTA cards in the box.
I'm not going to join or submit, too much work.

But if IOTA made mandatory upload to LoTW....I'd join and pay the fees
gladly.

Same with CQ awards.

And I don't care about wall paper, I'd do it support the program and people
willing to go and put on the islands.

Same with the Lighthouse people, castle, and special event groups.
I'd gladly send a donation to support operating.

But I'm OLD, with a capital O.
Don't have time to waste sorting cards, filling out forms for certificates
my eyes couldn't read anyway.

Interesting point Bill.

While on VHF - I was an avid 'wallpaper collector' - When I got the HF ticket back i '99, I made a concious descision that there were only 2 awards worth having - DXCC and WAC.

IOTA is , in my mind, horrendous to track, collect cards and submit for, while WPX 'proves' nothing about ones 'skills' as an operator.

If people wish to chase these awards then fine by me - I am not suggesting otherwise, merely agreeing to a degree, that if they were 'automated' - then the takeup would be higher.

Mind you - If you think IOTA is bad ....try working out how to track all the various aspects of Worked All Britain [Been there done that - got the certificates and trophies. And when I started that back in 1980 it was all paper records <gulp>]

I am trying to find the e-mail - sure it was posted to the
UK-Contesting list.

Whether it was full on-line submissions or IOTA contest 'matched
QSO's' I cannot recall - I will keep hunting. Mind you if it is the
latter - virtually an LoTW 'clone'

3401. LoTW Return Rates, Was Re: [ARRL-LOTW] Again?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-11 01:46:23 UTC
From: R Johnson
Topic: 3379 Message: 3401

Hi Carl:
5% does seem very low !!!
My current overall return rate is 17.9% and 28.9% for the ARRL Nov SS SSB.

Like you I use LOGic 8. You might want to set the filters up and check your total
# of QSO's for each year and the # of LoTW confirmations for that same year.
You can then make up a table of % LoTW rate for each year.

In general I would expect the 2006 % return rate to higher than 2005 % return rate
and 2005 to be higher than 2004.

One factor that could be effecting your overall rate is the # of pre 1990 QSO's you have
!!!
Prior to 1990 most logging was done on paper and haven't been converted to electronic
format. My guess is that only a small percentage will ever be transcribed, much less
entered into LoTW.

Other factors to consider that effect your LoTW Rate:(NOT meant to start any wars)
DX vs Non-DX (NA)
CW vs Phone
RTTY/Digital vs other modes
Contest vs Non-Contest

Just some thoughts that came to mind. If you need any help defining the required filters
for LOGic 8, just let me know.

I have a feeling that this subject should spark some discussion on the List

73 Graham M5AAV"

Graham,

I am afraid you are wrong:

a. IOTA site provides tracking program which is easy to use.

b. When using this tool, you make saving on card checking

c. An average DX-er has 200 IOTA up-front (many are DX countries)

d. IOTA activators are very prompt in QSL-ing, much better than residents.

3403. Looking for a bit of Help

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-11 14:17:42 UTC
From: Peter Mercer
Topic: 3403 Message: 3403

Hi
I'm Pete GI4VIV I'm intending to Participate in the AFRI75 Irish
Radio & Transmitter Society Dxpedition to Swaziland
In March of this year (details still in the process of being prepared
for general release) to celebrate the 75th
anniversary of the IRTS
I will be attending a meeting this Sunday 14th January near Dublin to
thrash out our agenda
One of the Subjects is obviously going to be General Logging.

I am Obviously a Registered user of LOTW and What I would like is some
of you with more experience than I
with LOTW to point me in the right direction.

We as a Team are being given a 3DA?? call for participation in CQ WW WPX
we are also being allocated individual
3DA calls for whatever our individual endevours may be, mine in
particular is RSARS (Royal Signals Amateur radio Society) nets.

This is the information I'm looking for:-

Is there a way on completion of the expedition to link my 3DA call to my
own call at LOTW so that I can on completion upload my own 3DA log
to LOTW if so how do I go about it whats the procedure etc

We will obviously be Dealing with QSLs in the Normal Dxpedition fashion
with a QSL manager
but for those that use LOTW it would obviously be the way to go for
instant QSL Confirmation

Any help on this would be appreciated
Cheers and I hope to work some of you in March from 3DA

Pete GI4VIV

Hi Pete

Glad to see you are a LoTW user and looking forward to meeting you on
Sunday next.

In response to your query please have a look at
https://p1k.arrl.org/lotw/faq#othercall
which should sort out things for you.

I will be in a similar position and will be loading my 3DA0 logs as
soon as possible after the trip.

3406. Re: Again?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-12 12:09:21 UTC
From: Dave Lindsay
Topic: 3379 Message: 3406

I agree with mostly all that has been said on the subject.

LOTW has been very poorly advertised in my opinion. I suspect that national societies won't mention it as it would be detrimental to their own QSL buros. Of course the onus is on the ARRL to promote it.

From a UK point of view, I found that it is not too difficult to register with LOTW.

I download an ADIF log file & open a LOTW file in DX4WIN so that way I can keep a track of US counties. Only problem is that some US operators don't include their county.

5% confirmations is a bit low but I suspect that Carl is not a contester. But of course I may be wrong. The last time I checked my figure was over 13%. Hence the need to get more non contesters signed up & that will only be done by promotion.

I wonder what the late Geoff Watts would think of the monster he spawned with IOTA. Leave IOTA to IOTA, it's not my cup of tea, but one man's meat, etc, etc.

Very nice to see a message on the LOTW page saying that it was offline. Very helpful.

Think I have said all I have to on the subject.

3407. US Counties: (was Re: Again?)

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-12 17:17:24 UTC
From: Ford Peterson
Topic: 3379 Message: 3407

From Dave-GM4HQF,

...snip...

I download an ADIF log file & open a LOTW file in DX4WIN so that way I can keep a track of US counties. Only problem is that some US operators don't include their county.

...snip...

Dave, and others

Counties should be part of the data set. But I have observed that this becomes difficult when one is mobile. So difficult, that I do not even keep my mobile log as part of my station log at all. Naturally, those QSOs do not make the trip to LOTW--ever!

Chasing counties is quite a project. I don't understand the appeal, but I do understand the appeal by those that do understand, of getting counties confirmed on LOTW instead of first class mail ($$$$). This is a logging problem, which translates into a LOTW problem.

For example:

I participated in the Minnesota QSO party as a rover. If you have never tried being a rover in a state party, do it! It's the closest thing to being on a Caribbean DX adventure in the middle of CQWW. As a rover, you cover as many counties as possible. Each new county brings a newly inspired hoard chasing you. During the MNQP, we operated in 21 counties in 10 hours of operation. Well over 1000 QSOs are commonplace--with many DX calls included. But how do you log this? The goal is to get into a new county every 20-30 minutes. Each new county would require a new certificate on LOTW. And the log is, well, complicated. ADIF formats do not support these activities.

To get back to Dave's comment, people move. The national average length of stay in a US QTH is 5 years. Moving across county lines is commonplace. Many logs do not reflect these subtle changes. My thinking is that many LOTW users cannot assert what county was when so they leave it blank.

It seems to me that this problem is a general logging problem that translates into a LOTW problem. What's the cure?

Ford, first I want to thank you for the Rover activity.
But...I respectfully disagree.

First issue. If someone moves, and doesn't know that he now lives in a different county....he's too stupid to have a Ham license. LOL

But as for Rover activity.
You do not need a seperate certificate for each county.

When I rove, I simply put a 'note' next to first qso "entering Lake County"
When I get to the next county I enter "left Lake, entering McHenry"
etc.

When I get home, I simply divide each section of log by filtering on the county name in that note field.

Each section of the total log then becomes divided by it's county.

Now sign each section, changing the state or county, and upload.

A 1K mobile log, shouldn't take more than a half hour to complete this process.

If you used N0FB/m, that would be the only certificate you would need, as it could be used for each of the counties you operated from.

QSO parties are lots of fun and can really be a challenge of skill and stamina.

Mr FireBrick. (please use name and callsigns instead of CB handles ;)

My comment about moving relates to history conversions. My log (for example) contains 30,000 QSOs. It took some time to evaluate which QSOs were for which counties, and I've only lived in 2 different counties with 2 different calls. I set up locators for each address/call and uploaded the history accordingly. I did that extra step so that I could identify my county for people. My intuition tells me that first time users will likely just upload their whole history in one shot. Obviously, someone who is a LOTW user and simply moves to a new county would upload all new QSOs with the new ID. But first time uploads is a different animal.

As far as marking the QSOs, and signing different QSOs in different counties, I fail to understand your procedure. I just tested it with my last ADI upload. When I go to sign my log, I am given an opportunity to change IOTA, CQ ZONE, ITU ZONE, etc. But at no time am I asked for my county. So I assumed this requires a new certificate/location ID. And there would then be one for every county.

What am I missing here?

Ford, first I want to thank you for the Rover activity.
But...I respectfully disagree.

First issue. If someone moves, and doesn't know that he now lives in a different county....he's too stupid to have a Ham license. LOL

But as for Rover activity.
You do not need a seperate certificate for each county.

When I rove, I simply put a 'note' next to first qso "entering Lake County"
When I get to the next county I enter "left Lake, entering McHenry"
etc.

When I get home, I simply divide each section of log by filtering on the county name in that note field.

Each section of the total log then becomes divided by it's county.

Now sign each section, changing the state or county, and upload.

A 1K mobile log, shouldn't take more than a half hour to complete this process.

If you used N0FB/m, that would be the only certificate you would need, as it could be used for each of the counties you operated from.

QSO parties are lots of fun and can really be a challenge of skill and stamina.

Subject: [ARRL-LOTW] US Counties: (was Re: Again?)

From Dave-GM4HQF,

...snip...

I download an ADIF log file & open a LOTW file in DX4WIN so that way I can keep a track of US counties. Only problem is that some US operators don't include their county.

...snip...

Dave, and others

Counties should be part of the data set. But I have observed that this becomes difficult when one is mobile. So difficult, that I do not even keep my mobile log as part of my station log at all. Naturally, those QSOs do not make the trip to LOTW--ever!

Chasing counties is quite a project. I don't understand the appeal, but I do understand the appeal by those that do understand, of getting counties confirmed on LOTW instead of first class mail ($$$$). This is a logging problem, which translates into a LOTW problem.

For example:

I participated in the Minnesota QSO party as a rover. If you have never tried being a rover in a state party, do it! It's the closest thing to being on a Caribbean DX adventure in the middle of CQWW. As a rover, you cover as many counties as possible. Each new county brings a newly inspired hoard chasing you. During the MNQP, we operated in 21 counties in 10 hours of operation. Well over 1000 QSOs are commonplace--with many DX calls included. But how do you log this? The goal is to get into a new county every 20-30 minutes. Each new county would require a new certificate on LOTW. And the log is, well, complicated. ADIF formats do not support these activities.

To get back to Dave's comment, people move. The national average length of stay in a US QTH is 5 years. Moving across county lines is commonplace. Many logs do not reflect these subtle changes. My thinking is that many

LOTW users cannot assert what county was when so they leave it blank.

It seems to me that this problem is a general logging problem that translates into a LOTW problem. What's the cure?

Ford
If you look at the TQSL signing module
You can change the location of every log section to reflect the location of those qsos.
Under the Station Tab, Select Edit Location.
Select the callsign
Click on Edit
The first page shows the call, grid, itu, and cq zone plus iota if appropriate.
The next page clearly allows you to enter the State and County for the qsos you are signing and uploading.

You need a Lifestyle change if: Always keep a box of kitchen matches in the bathroom.

Ford,
It doesn't require a new certificate for each location, simply a new
station location.
When you use TQSL to sign a log, the first dialog box has a list of
your station locations.
All you've got to do is to create a new one with the proper county,
etc. associated with your existing certificate. No hassle at all.

I thought each of the locations listed was a certificate. My bad...

I'm chasing the 5BWAS award and am within 1 state on most bands. If I enter all these other county QSOs, and out-of-state mobile QSOs, will the LOTW server be smart enough to segregate my non-current-location QSOs from my outstate or even out-of-state mobile QSOs for purposes of awarding me a WAS certificate? Ditto for DXCC?

Doug,

DXCC won't care (all QSOs from within the same DXCC country
count).

With WAS you configure "WAS Accounts" on Lotw using "rules."
For example I have one "WAS account" where the "rules" are
US County = Seminole and US STATE = Florida. This allows
all QSOs as W8IK, W8IK/4, K4IK or W4TV made from this county
to count for WAS. If I operated portable from Volusia county
Florida, I could modify the rule to include those QSOs since
they would be within the 25 mile radius but if I operated
portable in Palm Beach County those QSOs would not count since
they don't match the rule.

73,

... Joe, W4TV

This is explained pretty well on the LoTW awards page.

For DXCC, it doesn't matter as long as all of the QSOs are from the same DXCC entity and callsign.

For WAS, you must tell LoTW how to select the proper QSOs for the award; you can choose those with the same county, for example, for a given WAS account. You can have more than one WAS account per call. It doesn't matter to the people you QSOd with what location you're coming from as long as the state is entered correctly.

As I have lived at the same address for 40 years, I reckon you chaps should settle down. Hi

It doesn't annoy me one little bit if the county is not included. After all it is only a hobby & not worth getting uptight about. I am nowhere near getting the basic counties requirement on LOTW. If I included all the 25 year old paper QSL's I would be well over it but what the heck. LOTW is just a fresh start for me.

Your spot on Rick.

The scary part is with all these people uploading their entire logs over and over, if they finally figure this out they will over write all previous county info (same for State info)and screw the whole thing.

JOhn.

Yes and No !!!
If someone mistyped their State and entered "MS" for "MA" on their first upload to Lotw, and THEN discovered their mistake, all the need to do is correct the data in their "Station Location" then resign their entire log and submit it.

The last data uploaded into LoTW will be correct.

If someone received LoTW WAS credit for "MS" yesterday and then checked in a couple of days they should see that "MS" disappeared and was replaced by "MA".

Their LoTW WAS Award is correct.

If you imported the LoTW QSL's into your "Logging Program" you might have a problem resolving the issue. It depends on how your "Logging Program" handles things.

Counties are not tracked by LoTW for awards, just DXCC and WAS.

You need 1 Certificate for each Callsign you held.
I have 3 Certificates: WN1OFR, WA1OFR, and K1VU.

Next you need to setup a"Station Location" for each County and each Callsign
EX:
K1VU-PLY (for Plymouth County)
K1VU-BRI (for Bristol County)
WA1OFR-PLY (for Plymouth County)
WA1OFR-BAR (for Barnstable County)
WN1OFR-PLY (for Plymouth County)

Then sort your log (FILTER by DATE)and then create an ADIF file for each
Callsign/County you setup.
EX:
K1VU was in Bristol County for vacation between 6/23/2002 to 9/3/2002.
I would extract the Q's I made there between the dates and create an ADIF file
and call it VAC_02.adi. I would then sign it with the "K1VU-BRI Station Location"
and then UPLOAD the resulting VAC_02.TQ8 file to LoTW. DONE !!!

I'm making the assumption that DX4WIN has some kind of filter utility.
I've been using LOGic 5,6,7,& 8 which has a very powerful "Filter Capability"
built in that makes this type of operation as easy as "Falling off a Greased Log" !!!

>As far as marking the QSOs, and signing different QSOs in different

>there would then be one for every county.

You're doing it the hard way. Setup you "Station Locations", you only have to do it once
!!!

>What am I missing here?

Hit "NEXT" at the bottom of the page to enter County and State on the second page.

If you not confused yet, I can try harder :-).

I wonder if logging a qso party county like this is a good idea.

Especially if you are using the cluster to watch for the counties you need.

I log mobiles/rovers, with this convention, becuase that's the way I was
taught to do it a long time ago.
You were supposed to append /m if you were mobile and /p if you were a
portable, away from your station licence location.

Now I fully understand that callsigns no longer indicate what region your
in. But old rules/procedures die hard in my old brain.

With so many 'creative' callsigns, it's impossible for anyone to 'predict'
how a qso will be uploaded to LoTW.

If I am a rover and operate in Lake County, I'm going to sign
W9OL/M LAK, note the space.
Becuase that's how I'm going to upload that qso.

I think that there will be no qsl if a person I work, logs the qso as
W9OL/LAK and then uploads to LoTW that way.

I've experimented after qso parties to see how the big Rovers will upload.
I've yet to get a qsl match with the county appended to the call.

You see cluster spots sent that way, which may add to the idea that is how
the qso should be logged.

I send cluster spots only with the /M and put the county in the comments
field.

(Please don't yell at me that there is no LoTW county awards, I'm painfully
aware.)

Does anyone have a better idea?
I've worked 300 plus in a qso party, which only results in 1 or 2 LoTW qso matches. Not because they didn't upload, but becuase my callsign entry is NOT a match for their callsign entry.

3420. LoTW Return Rate Analysis

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-17 02:45:48 UTC
From: R Johnson
Topic: 3420 Message: 3420

Hi:
Just for the fun of it I decided to take a look at my LoTW return Rates
for the last 16 years (1990 to 2006). NO PAPER QSL's INCLUDED !!! LoTW ONLY !!!

First, I guess that I'm a "Contester" as 98% of my Q's come from contests.
2% of my Q's come from every thing else, DX, Random, Band Openings, Spots, etc.

Modes: 99% Phone, 1% CW,AM,RTTY,PSK31, etc.
DX QSO's = 42.3%
US QSO's = 57.7%

******** Total % QSO's confirmed by LoTW per Year *******

YEAR LoTW
2006 20.4% LoTW adds WAS Support (01/16/06)
2005 24.1%
2004 23.3%
2003 24.2% LoTW goes Online with DXCC (09/19/03)
2002 19.5%
2001 14.8%
2000 14.5%
1999 15.2%
1998 12.3%
1997 8.8%
1996 3.7%
1995 4.2%
1994 3.2%
1993 2.7%
1992 5.3%
1991 0.0%
1990 2.9%

Conclusions:
1- It appears that there is a 5% to 10 % increase after LoTW went Online in 2003.
2- A large number of LoTW users have uploaded their "Old Logs" as far back to 1998.
3- Some have made the effort to upload their back to 1990
4- I have some problem with 1991 0.0% !!! Time Warp ??? Was Transcribed from paper log.

Maybe some of you can reach other conclusions from my data.
How do my results compare to what you experience with LoTW ???

73
Bob, K1VU

PS. I use LOGic 8 for my "General" log and it provides excellent facilities for extracting
the data shown here. Just for the record, NOT a sales pitch !!!

3421. "News and Notes", Lack of date and Formating

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-17 03:09:01 UTC
From: R Johnson
Topic: 3421 Message: 3421

This is a copy of a message I sent to the LoTW Help at the ARRL.

After July 7, 2006, none of the "News and Notes" have been dated.

This makes it difficult to help answer questions for new users.

When the messages were dated you could simply refer them to a specific
dated message.

Also the format of the last posted message is about 2/3 the width of the
previous messages making it much longer physically.

I don't think it would take much effort to correct these problems, and would
sure help us that are helping others getting started with LoTW.

Also the very first message in "News and Notes" is dated Dec 31,1969.
I don't think LoTW was even thought of in 1960 :-) !!!

Bob, and others...

The 1998 phenom is likely just the advent of the PC coming of age. That's about the time Bob Furzer rolled out his free Logger, and a PC was about as expensive as a week's worth of groceries. Up until that time, I had little interest in the paper chase--it was simply too much work. The old logs are slow to coming on-line. Mine never will as they are gone prior to 1998--they just don't exist--dumpster material. The 2006 drop is somewhat of a mystery to me. You attribute some change due to WAS support. I don't think so. There must be some other phenom.

I am aware of several members of a local ARC that did get involved in that 2003 - 2004 time frame, and have since lost interest due to certificates expiring. The old Qs remain for them. But no new Qs come on board. I wonder if a person could find out how many certificates are expired?

The frustration of having some areas of the country not participate is slowing down progress too. WY is a serious no-show in my logs--missing on several bands. Not many guys have 30,000 QSOs on LOTW. And of my 30K Qs, nobody from WY is participating? So I can only imagine the frustration of an OP busting his hump to land 1000 QSOs on LOTW. It's not surprising if Ops sign up to give it a try, and lose interest due to lack of participation--contributing to the attrition.

My gut says that there is a critical mass when participation may explode. What brings the momentum to the next level will likely be participation in several new awards. I've wondered what awards would give the biggest boost to participation. Is it Counties? IOTA? CQ Zones? ITU Zones? VUCC? Fists? I don't know. No marketing info available. My gut says it is the County awards that is going to turn the tide because there are numbers of DX chasing counties. I also know several Ops busy chasing the CQ Zones. It is people applying for awards that creates the $$$ flow that will get the attention of the ARRL Board.

As they say in every business -- PROMOTE, OR PERISH!

Do you really upload your callsign as "W9OL/M LAK" ?

The /M requires a separate certificate, doesn't it, but how do you get the LAK appended in the upload?

I really screwed that up and didn't make myself clear.

If I'm a Rover, and sending cw from a mobile.
I send.....W9OL/M, which was the way I was taught way back when, to sign
your call when working from your auto.

So if I'm driving along and sending a cq, I would send my call as W9OL/M in
Lake county.

But it's been so long since I operated from my auto, that I forgot that
England now uses M for prefix.

So now I'm not sure what is the best way.

So maybe we should just upload using <callsign> and not put on any mobile or
portable suffixes.
Just separate each section of the log by county and upload each section
individually.

Unfortunately, Wayne has left and the League hasn't filled the void.
So we may not get a definitive answer.

73,
Vladimir VE3IAE

****

This really serves to illustrate a good point. A point that I have been concerned about for some time. While there are proper and improper methods to signing. These methods do not necessarily translate to logging.

In the state QSO parties, rovers will commonly sign N0FP/MEE for N0FP operating in Meeker County (my home QTH). While this is awkward, it is not uncommon and appears fairly uniform. As long as you log and I log the same way, LOTW has no problem. Some old loggers do have problems with it. They report "Unknown Entity". So people will alter the call received to correct the local log and still track the county.

However, with contesters outside of their home country, different conventions apply. From the US regulations:

****
Part 97.119 Station Identification:
(c) One or more indicators may be included with the call sign. Each indicator must be separated from the call sign by the slant mark (/) or by any suitable word that denotes the slant mark. If an indicator is self-assigned, it must be included before, after, or both before and after, the call sign. No self-assigned indicator may conflict with any other indicator specified by the FCC Rules or with any prefix assigned to another country.
****

So here we have a potential conflict. And my old Logger (16-bit) software, which I used for many years, had serious problems with this.

Most contesters prefer the format VP2/N0FP (for example) as opposed to N0FP/VP2. Why? Because to use the later would screw up your rates. People would hear "N0" and tune away if I used the later method. By signing VP2/N0FP at least then people would know immediately that I was DX and not NA.

Simple right?

Nope! Logger required the suffix approach. Memory seems to tell me that the problem was exacerbated to extremes when logging FO0 calls because you had to use a suffix to indicate which island was applicable. Other entities were similar. So no matter what was signed, if you wanted the log to correctly identify the country/island or whatever, you had to use the suffix. That Q gets uploaded the way it was logged, not the way it went through the radio and into the ears. Hence, no match in LOTW. And no clue in the notes as to how it actually went into the ears.

It would be excellent if LOTW could provide a warning or an alert that indicated to the user something like this...

"There appears to be a match with QSO (information in my log) but a problem with syntax."

I don't think this would be out-of the intent of the rules. So if his log contained N0FP with the suffix and my log contained N0FP with a prefix, then the above warning would be provided to the user.

IF LoTW ever gets funding for additional features/benefits, this would be one area that could use improvement. Everyone knows LoTW keeps you "blind" to the other stations submissions and creates the scenario being discussed.

The LoTW software SHOULD be "smart enough" to determine the root callsign, then compare the date/time/band/mode, and if these align, grant the QSO confirmation, regardless.

This would eliminate the problem whether the VP2 designator is uploaded as the prefix or suffix, and the mobile, portable, and QSO party issues. Otherwise you will need a rigid set of rules that no one is going to follow anyway.

Of course the alternative is to use the eQSL system in parallel. There you can spot and correct these inconsistencies and make "adjustments" to your log as necessary.

Bob, and others,

I like your approach better than the warning or flag. After posting my suggestion, I chuckled at the notion of you and me having a relevant QSO and discovering the problem simultaneously, uploading our corrections simultaneously, and ending up in the same situation with no match. Your approach is better. Just parse the field properly and grant the QSL as a match.

Actually, it would be very painful to try and reconcile my eQSL account with my LOTW account. Unless you have some whiz-bang tool to do so, I'm afraid I'd be looking at each QSL manually.

Thanks for the comment. I like the approach.

Ford, and anyone else interested...

QSL about discovering the "flipped pre/suffix" simultaneously... but that won't happen for two reasons... the original "wrong uploads" will remain in the LoTW system as Zombies, and depending which of us is the quickest draw, uploading a correction will grant a confirmation. If we both make the correction, we will have two confirmations.

Regarding the eQSL thing, it is pretty simple... When you go into your inbox for the month, QSO's that have been uploaded by other parties will appear with a BIG red X if your log does not match up. So these orphans stand out like a sore thumb.

The wrong thing to do is accept or reject them without investigating them. I have discovered four major issues with electronic eQSLing. And these are most likely carried over into LoTW as well.

1) Fellows upload all their logs under ONE callsign. So I find BIG red X's on contest callsigns that have not been uploaded using the contest callsign.

2) Fellows upgrade to a new callsign but load all their old logs from a former callsign under this new callsign. So I find a perfect date/time/band/mode confirmation but a different callsign in my log.

3) I upload my log with the date/time recorded in Local Time instead of UTC. These were contest logs from the 1990's. So I find a who list of BIG red X's in the monthly inbox. I have corrected about a half dozen of my contest logs where I made this mistake.

4) The scenario we are discussing. I logged VP2/NØFP and your submitted NØFP/VP2. This is easy enough to fix IF you can see it.

But I agree, it does take time and effort to reconcile logs and QSL's, whether it's the old fashioned way or the new electronic way. As proactive as I am electronically (it's a guilt trip I'm trying to solve for my non existent manual QSL history), I still wonder sometimes whether it's worth all the effort!

I have over 40,000 QSO's uploaded with about 8,600 confirmations. So I'm hovering around a 20% confirmation rate.

73 de Bob - KØRC in MN

MN stations will be looking for your participation in the Minnesota QSO Party being sponsored by the Minnesota Wireless Association (http://www.w0aa.org/mnqp.htm) on Saturday Feb 3, 2007 beginning at 1400 UTC. Join the fun!

I'm relatively new to this group and to LOTW so please bear with me. There are a number of excellent suggestions concerning increased participation and engagement by other amateurs in LOTW. Does the ARRL pay attention to these sentiments - or are the converted sing in the choir? I believe that the sentiment that adding more awards to the package is the key as well - after all what is the purpose of maintaining this database if it is not used for widespread qualification for awards? My purpose here is not to criticize ARRL - I'm an enthusiastic member - but am wondering why there are so few hams in the LOTW program and what we could do to assist in recruiting more so that return rates on QSOs is higher than what I am experiencing.

Yes, I members of the LotW team monitor this list. The problem is not a lack of interest or competence on their part -- its severe understaffing. There is much this team could and would do, but basic operation and maintenance is consuming most of their available cycles.

What constructive actions can we take? Engage your ARRL representative, and suggest that ARRL allocate more budget to LotW development.

I think Dave's absolutely correct. Because ARRL is having financial "issues", LoTW is being starved for budget. The only way to make the "senior management" take notice is for you to tell your division director that LoTW deserves more financial support. The squeaky wheel gets the grease, after all.

3436. LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-18 12:58:14 UTC
From: JV
Topic: 3436 Message: 3436

UMMM, I wonder if some large radio club would volunteer to take over
LoTW and the QSL service. As Dave said, they can use all the help that they
can get. Sure would hate to see this service go down the tube. Of course
this would have to have the blessing of ARRL.

From: FireBrick
Topic: 3437 Message: 3437

I was one of the original beta testers.
I truly hoped that the LoTW concept would succeed.

But in these past few years, of snail pace operation, I've grown to believe
that the ARRL has written it off.

If you look at the demographics of USA amatuer radio operators, I think a
strong case can be made that we are the last generation of 'Hams'.

There is plenty of 'programming' talent available.
Some of the best software written is by contributors/members of this very
chat reflector.

But I've seen nor heard of any attempt by ARRL to invite these people to
join the team.

A check of today's LoTW homepage still shows not even 15K users.

There is a compilation of callsigns of persons submitting logs to LoTW.
I've refrained from checking that list against ARRL officials/staff.
My blood pressure is high enough.

I read just recently that 'contest logs' can not be added to LoTW as there
is no cabrillo to adif compatability.

We have children cracking banks and firms security and we can't find a
programmer to write a conversion script?

I can think of 3 contester/dxer/multimode/computer gurus that could be
approached.

I'm a Life Member, have contributed to fund raising.
But I'm beginning to think the 'Life' has gone out the Leadership.

Flame away, I'm old but still have my firefighting gear.

I agree 100%, with the ARRL there is sometimes a 'not invented here' philosophy. Of course we (the logbook writers) could do this, we could do it much better and make it a pleasure to use.

I am very impressed with the speed of eQSL.cc at the moment - I'm uploading in real-time from my new digital mode software, it takes as long to upload to eQSL.cc and get a reply as it does to send two characters in PSK31 - it's really that fast! Sometime I have an email from eQSL.cc before my PSK QSO is finished!

Couple the talent behind eQSL.cc with some good web design and the amateur community would have a winner. Sadly my web design skills are truly dreadful.

Now back to the DVD - Cream at the Royal Albert Hall.

Simon HB9DRV.

****

Bill, and others

15,000 participants in LOTW is also a strong index as to the traditional activity on the bands. I say 'traditional' in terms of people choosing to actually operate their radios with a purpose that requires logging. The contest group is only about 3,000 strong. I'm inclined to think that the majority of active contesters participate in LOTW. But 'contesters' is a small and shunned group to begin with--lots of contest haters out there. DX chasers are an obviously motivated group, but few are really active. Paper hangers, like county hunters, are likely the majority. Apparently, world-wide there are 15,000 of us...

I too have hoped LOTW would be developed quicker, better, faster, slicker, more whiz-bang. And the notion you raise about volunteers is valid. Using volunteers can be an effective way to build software. However, using volunteers comes with numerous other issues that often makes it a non-starter...

To develop the teams, there has to be a leader. In a political group, that leader becomes a lightening rod for attracting grief from the masses. That leader has to be properly empowered to make the decisions involving the thousands of bits of minutia, without getting fired (or crucified) in the process. Building software by consensus can take 10 times as long to build the consensus as it does to write the code--no, make that 100 times longer!

Another ARRL project involved log checking software in the contest branch. They use volunteers to administrate log checking, but the software was developed by real people being paid real dollars. It's time consuming, requires a special skill set, and must be devoid of what I call "scope creep." Somebody has to decide what is needed and move in that direction without opening up new and improved cans of worms in the process.

Volunteers also introduce a level of complexity due to geographical location. And protecting the code from abuses, retaining control of the direction of development, testing, etc., all become a logistical and inter-personnel nightmare.

I'm certain Dave Bernstein will weigh in on this tread. His DX Lab has been a labor of love for years. He's intimately familiar with the complexities I'm talking about. But your comment is absolutely true--it is an issue of leadership. I strongly hesitate to say "lack of leadership" because it takes a delicately balanced mix of web skills, management skills, availability of 'free' time, desire, empowerment, and an extremely thick skin, to do a volunteer build. The planets are in alignment about as often as you can find one individual to lead a group of talented individuals--all of whom must satisfy the mix of attributes in that previous sentence.

Never say never. The talent may be out there. Most that have the talent also have the wisdom to know what raising their hand as a volunteer will likely entail. But they may be there. In which case, a thoughtful plan, presented to the Board, may likely breed success--or at least forward motion.

JV, maybe I am overly optimistic and trusting, but Joel Harrison told
me in an off line e-mail that they are totally committed to LOTW and
have definitive plans to expand it. I have absolutely no reason to
doubt what Joel tells me.

IMHO, the idea that it will die is a bit of paranoia mixed with
dislike for the league.

3443. RE: future of LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-18 18:34:49 UTC
From: Phil Cooper
Topic: 3437 Message: 3443

Hi all,

What a great shame it would be if LoTW failed to continue!
For me, it has been a real godsend in that I have had QSO's confirmed that have cost me many dollars/IRC's to try and confirm without any luck.

It would be rather stupid to let LoTW stagnate in any way, as if that happens, and is noticeable, then folk will simply not bother with it, and it will simply fade away forever, and I doubt it would ever get support again.

I simply cannot support e-QSL, as it is not fully recognised, and will not count for awards such as DXCC etc.
I sometimes wonder if LoTW was sparked off by thoughts of knocking e-QSL into touch, and it now makes me wonder if the folk at e-QSL aren't laughing to themselves, and thinking of ways to gain legitimacy.

I cannot support the thoughts of some DX stations that LoTW is too difficult to get involved with.
I have seen many comments about "how difficult" it is supposed to be, but it really is NOT hard at all.

Maybe NOW is the time for each of us to encourage one or two new users to LoTW, boosting that 15k user figure up to something more encouraging. Maybe then the ARRL would have to take notice?

I also feel that those of us using RTTY seem to make more use of LoTW!!! I have just over 20% confirmation of my log!

73 all,

Phil GU0SUP

I believe that the bigger issue is that we have a good old boys group that is doing a lot of this, and they just don't know how to talk to anyone besides their buddies. The end result is that due to a wide amount of ignorance over what might actually be needed and what is possible for what price (a lot of software guys who are hams would probably create a better implementation for free, just to get some recognition, which is what the existing group seems to want given their stranglehold of sorts on progress in adding additional awards and enhancements of various natures, including a Java version of the tool that would run on all OSes and require a lot less support than having multiple versions, one for each OS).

My attitude is that I have enough paper - if I work 1,000 countries on PSK42 then I did it, I don't need a certificate :-)

I would like LOTW to succeed and support it, I'm not happy with the complexity though.

> I presume that is the 'Creams Farewell Concert' CD.....

No - the very concerts from May 2-3-5-6 2005, a fine DVD!

I didn't make myself clear.

I should have explained more correctly:

My question was "why can't contest cabrillo logs be automatically added to LoTW AFTER the submission deadline had passed?"

The response was that they didn't have that software ability.

I presently submit my normal log qsos via adif and contest logs via cabrillo to LoTW.

That would be nice but contest logs don't need to be signed.
Automatically adding them could compromise the integrity of LOTW.

Phil Cooper - GU0SUP in part wrote:

"I simply cannot support e-QSL, as it is not fully recognized, and will not count for awards such as DXCC etc."

And then Simon Brown - HB9DRV added:

My attitude is that I have enough paper - if I work 1,000 countries on PSK42 then I did it, I don't need a certificate :-)

And the next comment came from Bob Nielsen - (not licensed / no call indicated):

That would be nice but contest logs don't need to be signed.
Automatically adding them could compromise the integrity of LOTW.

And I'll throw in this comment from Firebrick - (W9Oscar Lima):

I didn't make myself clear.

Phil... eQSL is not fully recognized? It is in my book and over a hundred thousand others who participate in this service. I have eDXCC, eWAS, and close to eWAZ. What's so special about DXCC, WAS, and WAS that precludes anyone from the same feeling of achievement with the eQSL awards? It's simply a mind set and marketing. Kind of like religion, I would say.

Simon... Right on! But some guys just have to have that wallpaper, shingle, or trophy. You know... using Photoshop you can generate a perfect replica of any certificate your hearts desire.

Bob... The integrity of the DXCC program was compromised decades ago. The ARRL needs to get over it and move forward without over reacting with hyper-grade security measures. It's a hobby, not the NSA.

Firebrick... You know, I drink gallons and gallons of water and I still haven't made myself clear either!

And please know... My Mileage Does Vary... especially in the winter when there is a perceptible lack of traction...

And YES, I am stirring things up... It's snowing outside and there's nothing much better to do than stir the pot today...

But the real reason for my message is to deliver the postscript below...

73 de Bob - KØRC in MN

P.S.

Bill,

> I read just recently that 'contest logs' can not be added to
> LoTW as there is no cabrillo to adif compatability.

tQSL can sign either a cabrillo or ADIF input file. The only
thing that prevents contesters from uploading their contest logs
is either laziness or a desire *not* to give their competitors
a perceived advantage.

Frankly, ARRL should require all logs submitted for ARRL contests
to be signed so they could be added to LotW. Every ARRL Director,
Officer and section official should be required to have a LotW
certificate an upload their logs.

Participation in DXCC, WAS and other ARRL Awards programs should
require a LotW certificate and at least partial submission through
LotW.

Approval of credit for DXCC by DXpeditions should require a LotW
certificate and agreement to upload complete logs within 180 days
of the end of the operation.

More importantly the Board of Directors should provide the resources
necessary to complete the programming tasks to get all ARRL Awards
on-line with LotW, to assist all logging program authors who wish
to do so to integrate LotW support, and negotiate improvements
in the "sign up" process for non-US amateurs.

That's exactly the point of this whole discussion.
They SHOULD be signed!

If Newington wants LoTW to grow, they should make 'signing' part of the
contest submission process.
The fear that contesters would not see their callsigns in the contest
results possibly would persuade a few to join in.

Now I'm asking a question here.
Any of you who have been at that big hamfest/convention in Germany.

Did any of you see a representative from ARRL there with a laptop issuing certificates upon inspecting the same documents that have to be mailed.
How about Seanet?
Vandalia?

I may be wrong but I didn't see that happening at the last Dayton Convention. (2 years ago).

Heck, if they will pay my air fare...I'll volunteer to go .... even use my own laptop!

I think that's called in 'business' "Going to the client".

It's these very easy things that can be done, to urge, promote, sell LoTW and HASN'T been done that makes me think they have put LoTW on a back burner.

And no, I am not a League Basher. I just think we have to be more vocal about urging them to action.

Good, fast, cheap: choose any two.

Two weeks ago, I sent a letter to Joel Harrison and my division rep. I asked why LOTW wasn't being promoted, why ARRL contests didn't use some form of encouragement to use LOTW, did the ARRL even intend to continue support for LOTW and lastly if they could use experienced volunteers to maintain, monitor or enhance the service.

I received replies from Joel and my rep both indicating that QST will be doing a story on LOTW for it's March issue. No other information was provided. No indication if this will answer my questions or is simply a PR effort.

In the end there's still a vaccum of information that we can only fill with educated guesses. Guess I'll wait for the March QST.

So contest logs don't confirm a contact. That is idioitc and signature ought to be required.

That would be nice but contest logs don't need to be signed.
Automatically adding them could compromise the integrity of LOTW.

Bill,

> I read just recently that 'contest logs' can not be added to
> LoTW as there is no cabrillo to adif compatability.

tQSL can sign either a cabrillo or ADIF input file. The only
thing that prevents contesters from uploading their contest logs
is either laziness or a desire *not* to give their competitors
a perceived advantage.

Frankly, ARRL should require all logs submitted for ARRL contests
to be signed so they could be added to LotW. Every ARRL Director,
Officer and section official should be required to have a LotW
certificate an upload their logs.

Participation in DXCC, WAS and other ARRL Awards programs should
require a LotW certificate and at least partial submission through
LotW.

Approval of credit for DXCC by DXpeditions should require a LotW
certificate and agreement to upload complete logs within 180 days
of the end of the operation.

More importantly the Board of Directors should provide the resources
necessary to complete the programming tasks to get all ARRL Awards
on-line with LotW, to assist all logging program authors who wish
to do so to integrate LotW support, and negotiate improvements
in the "sign up" process for non-US amateurs.

JV, maybe I am overly optimistic and trusting, but Joel Harrison told me in an off line e-mail that they are totally committed to LOTW and have definitive plans to expand it. I have absolutely no reason to doubt what Joel tells me.

IMHO, the idea that it will die is a bit of paranoia mixed with dislike for the league.

Subject: [ARRL-LOTW] Re: future of LoTW

Two weeks ago, I sent a letter to Joel Harrison and my division rep. I asked why LOTW wasn't being promoted, why ARRL contests didn't use some form of encouragement to use LOTW, did the ARRL even intend to continue support for LOTW and lastly if they could use experienced volunteers to maintain, monitor or enhance the service.

I received replies from Joel and my rep both indicating that QST will be doing a story on LOTW for it's March issue. No other information was provided. No indication if this will answer my questions or is simply a PR effort.

In the end there's still a vaccum of information that we can only fill with educated guesses. Guess I'll wait for the March QST.

3462. Future of LOTW (More thoughts)

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-19 02:18:06 UTC
From: ve7axu
Topic: 3462 Message: 3462

It took me quite a lot of effort - trial and error - to get up and running with LOTW. I was previously an active eQSL user - but for a range of reasons decided that LOTW met a higher standard and so I made the switch. I'm curious why hams who don't want certificates would bother with LOTW (one or two comments to that effect)?

Perhaps its because I'm a relatively new ham that I still find QSLing fascinating. I also like to trade paper QSLs.

I'm grateful for a group like this one - and to the few of you who post advice on independent web pages that give advice on getting established - because it does seems forbidding and difficult to a raw beginner - and probably is off-putting to many as well.

With rising postage costs - its nearly $1 Canadian postage to send a QSL to the USA now - that motivated me to get into LOTW. I'd like to qualify for a bunch of awards - more than just the ARRL awards.

I originally asked if ARRL officials (Staff and volunteers) monitor this site because the ideas being expressed in this discussion are a gold mine of marketing information - if there was a genuine desire to recruit more participants.

It is enlightened self-interest that motivates me to suggest that we, as a group of dedicated LOTW users, see if there is a way to:
- recruit our ham friends to become users;
- lobby the ARRL firmly but enthusiastically to put more emphasis on the program;
- see if we can draw more attention to LOTW in the international ham fraternity; and,
- consider whether we as group could act as mentors for aspiring participants to help them through the setup process.

It might only take an initiative from our group here to make a difference - I've seen it happen in other areas of amateur radio - and why not?

What are your thoughts?

I don't think your "old boys group" allegation is true, Greg. In fact, I wish we had that problem -- it would at least mean that there were some developers to move things forward.

LotW itself runs exclusively on ARRL servers; what would be the benefit of porting it to Java? The client-side code is all available on SourceForge. It already runs fine on Windows, Linux, and OSX, but there's nothing stopping you from porting it to Java.

I believe that the bigger issue is that we have a good old boys group that is
doing a lot of this, and they just don't know how to talk to anyone besides their buddies. The end result is that due to a wide amount of ignorance over what might actually be needed and what is possible for what price (a lot of software guys who are hams would probably create a better implementation for free, just to get some recognition, which is what the existing group seems to
want given their stranglehold of sorts on progress in adding additional awards
and enhancements of various natures, including a Java version of the tool that
would run on all OSes and require a lot less support than having multiple versions, one for each OS).

Right now I am chasing WAS awards, picking up an occassional dx contact along the way. However, now that I have my certificate (the hardest part imho), the logging program I use makes
uploading to both LoTW and e-QSL fast and easy. so I will continue, and recommend, its use as an
easy and cheap way to help support others who are chasing awards. this is also an easy, free way of encouraging
new hams. I say that since I have found that many hams do not go through the time or expense of sending
QSL cards by mail, unless its for the one they need. and often not at all if they are not chasing paper.
From my QTH in Idaho, running psk31, i can not get away from Ca or Tx stations. I do not need them for my
WAS, and at times they even make it hard to copy the weaker stations. but I will still hold a QSO with them if they answer my call, and I still upload them to Lotw, since maybe they needed Id.
A very free and easy way to support other hams in the hobby.
I am also the only LoTW user in my area of Idaho. in these 2 counties there are only about 9 active hf users, and only
4 chase dx at all. the others are involved in local traffic nets and such. I do have a couple of other people who have asked some questions about it, so at this months club meeting, I am planning on a small presentation of LoTW in the hopes of generating some interest.

Thank you Mike,

I think your last comment is probably on the money.

I would hate a prospective LoTW user to join up to this group looking for encouragement at the moment Come on keep taking those meds guys, life is not all that bad.

One thing that all of us could do and it wont cost you any more than a minute of your time is to add a note to your QRZ.COM and other listing stating that you use and support LoTW.

If someone has taken the time to look up your listing then they are probably interested in QSLing, if they keep seeing these messages of support then perhaps they will join up.

I signed up to LoTW just 1 year ago. I am no computer guru, just a farm boy here and have had no trouble understanding the process or the reasoning behind the process.

Keep going ARRL, LoTW is a winner. Now if you could just get over what ever the hold up is with supporting more awards it will move ahead again.

When I joined LoTW I was not chasing Awards but to help those who were. So yes there are those of us out there who the pleasure of doing it for others is reward enough.
I must admit that after particiating for 1 year I have now become more interested in the DXCC program than I ever was in the last 20 years of hamming.

>about the time Bob Furzer rolled out his free Logger, and a PC was about as
>expensive as a week's worth of groceries.

Hi Ford:

Very true, and the early Logging Programs shared very little in the way of
compatability with each other. ADIF and Cabrillo formats weren't even though
of yet. Many log are just in limbo, waiting to be converted.

>Up until that time, I had little interest in the paper chase--it was simply too much work.
>The old logs are slow to coming on-line.

>Mine never will as they are gone prior to
>1998--they just don't exist--dumpster material.

That's a shame, just think of all the fun you are missing transcribing them :-) !!!

> The 2006 drop is somewhat of a mystery to me.

Remember we are only 2 weeks into 2007 and there is a "Lag Factor" to consider.

>You attribute some change due to WAS support. I don't think so.
>There must be some other phenom.

I didn't mean to imply that. WAS was just meant to be an event marker on the
LoTW timeline.

However, if I had extracted my data based on "QSL Date" instead of "QSO Date"
their might have been some correlation with WAS coming online. I did notice an
increase in the number of QSL's, but it is subjective on my part.

I'm working on getting some QSL/Year data !!!

>I am aware of several members of a local ARC that did get involved in that
>2003 - 2004 time frame, and have since lost interest due to certificates
>expiring. The old Qs remain for them. But no new Qs come on board.

Good point, that's something I hadn't considered !!!

I only know of 2 members in one of my clubs with renewal problems.
One lost his "Postcard" and is waiting for another one from the ARRL to renew,
has about 30K Q's to upload.

Another let his expire, when he finally renewed, he was Mad Hell that LoTW ONLY
extended the cert. expiration from 1 yr to 3 yrs. He refuses to use Lotw because
of that. Go Figure !!!

May we should all make a concerted effort to seek out and help those with expired certs. renew them and get back to using LoTW.

>I wonder if a person could find out how many certificates are expired?

Only way I can think of is to contact your SM or Div. Director and ask the question.

>The frustration of having some areas of the country not participate is
>slowing down progress too. WY is a serious no-show in my logs--missing on
>several bands.

Gee, I have WY on 10,15,& 20 via LoTW !!! Now in my case ME is giving fits. I've worked them on all bands except 160M (no antenna) and only have them via LoTW on 6m and 2M. I sometimes wonder if word about LoTW has made it up there !!!

>Not many guys have 30,000 QSOs on LOTW. And of my 30K Qs,
>nobody from WY is participating? So I can only imagine the frustration of
>an OP busting his hump to land 1000 QSOs on LOTW. It's not surprising if
>Ops sign up to give it a try, and lose interest due to lack of
>participation--contributing to the attrition.
>
>My gut says that there is a critical mass when participation may explode.
>What brings the momentum to the next level will likely be participation in
>several new awards. I've wondered what awards would give the biggest boost
>to participation.

I think that WAC would be easy to implement as an ARRL Award.
VUCC should get the VHF+ community active, I know many are waiting for its' implementation.
Counties, WAZ, IOTA, etc., involve interfacing with other organizations which becomes a problem.

>Is it Counties? IOTA? CQ Zones? ITU Zones? VUCC?
>Fists? I don't know. No marketing info available. My gut says it is the
>County awards that is going to turn the tide because there are numbers of DX
>chasing counties. I also know several Ops busy chasing the CQ Zones. It is
>people applying for awards that creates the $$$ flow that will get the
>attention of the ARRL Board.
>
>As they say in every business -- PROMOTE, OR PERISH!

And our promoter is no longer with the League and that worries me !!!

Subject: [ARRL-LOTW] Re: LoTW

Thank you Mike,

I think your last comment is probably on the money.

I would hate a prospective LoTW user to join up to this group looking for encouragement at the moment Come on keep taking those meds guys, life is not all that bad.

One thing that all of us could do and it wont cost you any more than a minute of your time is to add a note to your QRZ.COM and other listing stating that you use and support LoTW.

If someone has taken the time to look up your listing then they are probably interested in QSLing, if they keep seeing these messages of support then perhaps they will join up.

I signed up to LoTW just 1 year ago. I am no computer guru, just a farm boy here and have had no trouble understanding the process or the reasoning behind the process.

Keep going ARRL, LoTW is a winner. Now if you could just get over what ever the hold up is with supporting more awards it will move ahead again.

I like your enthusiasm Joe and I am enthusiastic too but I dont
think it should be compulsary.

Neither is there a problem for us non USA amateurs signing up. It's
not a barrier it s not dificult.

I think everyone using LoTW advertise the fact on the Web callsign
servers would help.

What about "Personal Choice" ??? Are we going to have an LoTW Gestapo ???
I think this would be counter productive as well as unenforceable.
It probably result in fewer "Contest Logs" being submitted to the ARRL.
The other 90% of the worlds "Contest Sponsors" could care less.

>Every ARRL Director, Officer and section official should be required to have
>a LotW certificate an upload their logs.

Absolutly NO problem with that !!! In fact the League should make those who
borrow the W1AW callsign be required to use LoTW and complete ALL of the
"Station Data" for the location they operate from. I'm still waiting for
Dave, K1ZZ to upload his logs so I can get LoTW confirmation on a QSO.
Like charity, LoTW begins at home :-) !!!

>Participation in DXCC, WAS and other ARRL Awards programs should
>require a LotW certificate and at least partial submission through
>LotW.

Again UNENFORCEABLE !!! What about those that just want PAPER ???
I have 2 local DX'ers one with 353 confirmed and the other with 354.
They have no interest in LoTW. Their choice !!!

>Approval of credit for DXCC by DXpeditions should require a LotW
>certificate and agreement to upload complete logs within 180 days
>of the end of the operation.

Or WHAT ??? We won't let them spend THEIR money on the DXpeditions
of their choice. Then what are we going to do tell everyone that
worked them that the ARRL won't honor the QSO because they didn't
use LoTW ???
Great Public Relations for the League. Remember that the ARRL only
represents about 20% of the US Hams !!! Do you want to make it less ???

>More importantly the Board of Directors should provide the resources
>necessary to complete the programming tasks to get all ARRL Awards

3474. Overall QSL Rate in LOTW now at 12.5%

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-19 07:01:21 UTC
From: timgep
Topic: 3474 Message: 3474

Seems like we just passed 12% about 3 months ago, and
now its up another half percent! LOTW is picking up
steam.

I am big into RTTY contesting, and my return rate is 32.2%

Like W9OL said, the ARRL needs to send someone overseas to
some conventions to sign people up. Eastern Europe and former
Soviet Union states seem to have low participation.

I do hope the ARRL makes a good announcement next month in
QST.

Hello FireBrick,

Thursday, January 18, 2007 FireBrick wrote to LoTW List:

F> I was one of the original beta testers.
F> I truly hoped that the LoTW concept would succeed.

ARRL and DXCC folks should finally realize and confess that if they
really want to succeed with LoTW, they should make LoTW participation
a major part of DXCC approval for both DXpeditions and resident DX
ops.

I talked to a fellow who said "there's no stinkun computer in this shack and never will be!"

Which is why I can't help fear that we are the 'last generation of Hams'.

More computerization in our communication hobby is the only way we will attract interest.
I'm not even sure that will be enough.

I'm not sure 'mandatory' membership in LoTW is necessary.
But...if that membership was attractive enough, 'mandatory' wouldn't be an issue.

As for 'Gen. Custer'. if I remember my Civil war history....he was wrong a bunch of times BEFORE he told his troops 'This is going to be a cakewalk' at Little Big Horn.

PS: "my trusty metal detector found a button and casing" while walking the site. But no locks of 'yellow hair'.

Bob,

What you say is true. I did it several times in late 60's. It stopped.

Way back when according to the book on W6AM, the DXCC desk was even more accommodating. Back then one didn't need official government paperwork to prove one was legally operating in a given "country". Operating there was enough. One could send in a handfull of cards with QTH's indicated. The DXCC desk would then try and find out what "country" they would qualify for in your credits.

The emphasis seems to have changed. Instead of try to qualify operations, the emphasis seems to be on disqualifying them. We have a number of "dxpeditioners" to thank for this.

7O1A and 701YGF would have certainly qualified under the old criteria.

Art:

Just yesterday I contacted the VU7RG qsl route to make a donation.
I said I really didn't need the cards, and LoTW would be sufficient.

I was told that LoTW qsls would be available in 'late 2008'.

How much work could be avoided if those who donated or sent qsl cards would
indicate... LoTW as a desired alternative.

I sent a donation for VU7 Andamans, told them to save the money, didn't need
the card, and had a LoTW qsl within hours of the operation ending.

I have 'qsl via LoTW' in my cw and digital buffers.
I print 'qsl available via LoTW' on my qsls, and all the qsls of stations I
manage.
(yes I still answer all bureau/direct requests, keep envelopes on file at W9
incoming bureau)
I don't neglect the traditional methods even though I urge the modern.

>I was told that LoTW qsls would be available in 'late 2008'.

I believe this is the real kicker in this matter. Why would they wait until late 2008 to upload to LOTW? Same old same old. Money. If they Upload sooner they haven't maximized the opportunity for contributions. Before some of you go off on ANOTHER tangent, NO, NO, NO, I'm not suggesting that they are making money on the effort. The truth is they very likely will lose money, thus the desire to maximize contributions and minimize their losses.

This clearly is a catch 22 situation. I fully support LOTW, and contrary to some of the wild, paranoid, speculation on this reflector, I DO NOT believe it will die, nor do I believe that the League has lost interest in supporting it. I see that notion as wishful thinking on the part of those League haters who would LOVE the opportunity to say; "See I told you so, the ARRL won't even support their own programs".

The other side of the coin is that if the majority of confirmations moves toward LOTW, there will be a dramatic reduction in individual contributions and the ability of the DX-Peditioners to financially conduct their operations will be severely hampered.

Having said all of that, at this moment I don't have a suggestion for a solution. Start those brain cells to cranking.

I think there is another issue with DXpedition logs and LOTW.

Dxpeditioners please speak up on this. Correct me if I am wrong.

I believe that the logs in many cases are "copyrighted" in some way.
The contents of the logs can't be released to anybody without specific
approval from sponsors et al.

I know somebody interested in propagation tried getting logs from
DXpeditions for his work. He couldn't in many cases.

Uploading the logs to LOTW may not be allowed within the legal limitations.

From: Nenad Stevanovic
Topic: 3437 Message: 3482

Brian,

I am afraid you are wrong in the role of 'QSL manager'
for big DXpedition.

1. Any major DXpedition if financial loss.

2. DxPeditions can be devided into:

- inexpensive =< than $1 / QSO
(typical 20,000 QSOs for $20,0000)

- Moderate >1$ and <2$ /QSO

- Anything more than $2 is expensive including
3C0Y with astronomical $3.5 per QSO (my estimate).

3. Any expedition depends on sponsors, who pay the
lion share of the debt.

4. Role of QSL manager is obviously to handle
QSL requests, but also to offset DXpedition's
costs.

5. In most of cases, QSL manager for major DXpedition
does not make any money for himself, but handles
the 'extra' funds (contributions, and overpay) to the
major DXpedition's organizer.

6. ANy agreement between QSL manager and DXpedition
organizer is private and 'non-profit', and as such
sheltered from taxman.

Now oppose this to any system that is:

a. Owned by publically owned company,

b. As such not sheltered from taxman,

c. Even if any funds are made through 'copyright'
royalties, who makes decision where the funds go?

Publically owned companies are managed by
Board of Directors, that may have different
priorities (aka launching new AmSat instead of
sponsoring P5 DXpedition).

Hope this explains why major DXpeditions are
reluctant to submit logs into electronic systems.

regards

Nenad VE3EXY

I think there is another issue with DXpedition logs and LOTW.

Dxpeditioners please speak up on this. Correct me if I am wrong.

I believe that the logs in many cases are "copyrighted" in some way. The contents of the logs can't be released to anybody without specific approval from sponsors et al.

I know somebody interested in propagation tried getting logs from DXpeditions for his work. He couldn't in many cases.

Uploading the logs to LOTW may not be allowed within the legal limitations.

I submit to both LoTW and eQSL; why not, it is easy with my logging program, click, click and it is done.

I need the data from LoTW for official QSO confirmations, but why not help others using eQSL with confirmations that they might need???

All in the spirit of Ham radio.

I think that WAC would be easy to implement as an ARRL Award.
VUCC should get the VHF+ community active, I know many are waiting for its' implementation.
Counties, WAZ, IOTA, etc., involve interfacing with other organizations which becomes a problem.

****

I agree. In fact, I had a lengthy exchange with the guy that does verification of CQ awards. The zones could easily be used if the report writer were available. My gut says they would accept the LOTW report as documentation for zones. How hard can that be?

I think the real problem is that building the report writer would circumvent fees from being paid to LOTW for doing the yomen's work involved. So until the interested ($$$) parties get together and figure out how the fees should work, there will be no forward motion. Does anybody know anybody administrating the CQ awards program? How hard would it be to contact and negotiate a suitable arrangement on fees?

What fees am I talking about? Well, there is the fee for getting an entity "confirmed" by expending 1 credit. That fee goes to LOTW. Then there is the fee related to the issuance of a certificate. It gets complicated real quick.

For example, here is the link to the awards page at CQ for the WAZ award. Click on processing fees...

http://www.cq-amateur-radio.com/wazrules.html

Here you see a two tier fee structure based on being a subscriber or not. Hey! This is America! Land of the free and the brave! They can charge any amount of money they choose to charge. And determine the fee on any basis they choose. They choose to alter the rate and give their 'members' a break. The trouble is, CQ and QST view each other as competitors. I think CQ would be hesitant to share their client list with their competitor for purposes of administrating that fee schedule--or for any other reason. And it is perfectly within their right to try and make a few $$ selling plaques and the like. My intuition tells me that they use volunteers for much of this service now. So their margins would be trimmed if they incorporated LOTW into the mix. But this should all be negotiable at the appropriate management level.

I have not investigated, but my guess is that other award sponsors are in the same quandry. LOTW looks appealing from an administrative standpoint, but messes with their ability to make money. That's when the door slams shut.

Ditto for Dxpeditions and foreign QSL greenstamp collectors. And asking LOTW to collect and administrate a fee for getting that rare P5 confirmed is tantamount to selling QSOs, which is clearly illegal...

I have no proof that any the above is completely true. But my business intuition tells me that I'm not far off the mark.

Ideas anybody?

Experience with my kids says computers will attract new hams once they see an 'integrated ham shack'. Over Christmas my Daughter and future son-in-law who are both teachers visited. I demonstrated how a digital contact could be made, logged, uploaded and confirmed on EQSL (thanks to a Cuban op). I showed how satellites can be used, spotting nets etc. etc. They had no idea there were contests and awards. The integration of DXLabs impressed them.

Point is my daughter is now signing up to attend the ARRL teachers institute training.

Todays prospective new hams (in my opinion) have grown up in a 1 hour photo is not fast enough environment. They are used to instant gratification and receiving trophies for simply showing up. Cards through the 'boro' are not going to cut it. My son even commented why LOTW didn't include a printable QSL card as EQSL does. For many of this generation, contests, on-line QSL's and many, many awards are whats going to attract them.

The hobby is changing from experimenters to users but the experimenters will always be there.

In case you hadn't noticed - ARRL also charge for DXCC on a 'two tier
structure' - Members and Non-Members.

Sorry but you lost me here.

2 senario's

(1) You post your QSL card to the manager with a donation, he sends
a card back.

(2) You send a donation to the manager requesting a LoTW responce,
he responds by uploading your confirmations to LoTW.

I dont see the problem unless you are saying ARRL are selling LoTW
data for profit? No the DXCC admin fees are not profit and you incur
them with both systems so no argument here.

In the first senario the post system and possibly the printers are
the ones making the most out of it all. The second one most of your
donation will be available to cover the DXpedition expences not
printing expencive QSL cards and postage costs.

Firebrick has shown the way, good opn you and good on the DXpedition
for their responce, but what is needed is for DXpeditions to be pro
active rather than re active. IF they offered a convenient way to
make donations with the understanding that you wish to recieve a
LoTW QSL in leu of a card, and promoted this as an option I think
they would be suprised with the responce.

I cant see the problem but I'm just a simple farm boy here. Roll on
the bush lawyers to stuff it up.

From: Wayne King
Topic: 3490 Message: 3490

I decided to download my lotwadi file from the web site and the stats below are what came up when I imported the file into a NEW DX4WIN. Now I work a lot of RTTY but looking at the numbers I have more countries confirmed on CW/SSB then RTTY. I found this of interest me and maybe others because out of 74K+ QSO's I have uploaded to LOTW, 38K of them are RTTY QSO's. I wonder if other's see the same?

MIX . . . 230 . . 230 230
PHO . . . 171 . . 171 171
CW . . . 193 . . 193 193
RTTY . . . 137 . . 137 137

I was told that it is because the Contest logs are NOT digitally signed, and they will NOT take non-signed logs into LOTW. I asked why they can't make it mandatory for logs to be signed for the contests, and got the answer I expected - laughter. They said they uprising would amazing.

My proposal was quite simple at that point - give N extra mults, or N extra points (figure out what is fair) for logs that go into LOTW BEFORE the contest submission deadline! Think about what contesters would do for a few extra points....

Good for you. I'm always happy to find those who think for
themselves. I like a limited amount of paperwork, probably because I
have been at it for almost 50 years. I have been in DXCC for a long
time and hate to give it up.

Then, to be consequent, you don't send/receive/need any paper cards
(some kind of a cert) either?

Any way you say it , Nothing is needed to say who worked what and when they worked. For me nothing but my log is needed to say I worked another station. I do send cards and receive them too. I am member of the ARRL too and I am not counting on anything when it comes to saying contacts I made are good enough for them. I use all forms of getting and sending confirmed qsl for contact made. This log book of the world is just another way to do it as far as I am concerned. It will not determine anything different from any other form of qsl I use paper, post or eqsl. It sounds too much like if it is not confirmed by ARRL or the LoTW then it is not good enough. That makes it not good enough for me right there. I will support the ARRL and LoTW if I get something for it fine and if not that is fine too. I worked plenty of stations and gotten nothing so what's so important about getting something from ARRL. It is still just another confirmation any way you see it. Just my thoughts

My sentiments entirely Simon but I don't think it is too complex to use.

I hate having lots of rare, for me, DX on eQSL which 'don't count' but then again I know I worked them.

Still think the ARRL should publicise LOTW a bit more

I think that majority of ARRL is focused the most on the legal issues that they are persuing. Those are the most important. They don't talk to others, including in the ARRL about what others are interested in, or perhaps just ignore what they hear. This is the good-ole-boys mentality. They are good guys trying to do good things, but they're failing to take care of items of interest to others because of the isolation they paint themselves into by their focus/interests.

I guess I have to say this over and over to make the point. The point of Java is that it would be the best thing for all amatuer radio software to use. Why? Because developers could more trivially write software that integrates with other software utilizing java's dynamic class loading facitities. Then on top of that, you'd get to take advantage of Java's mobile code capabilities which make it possible for come as you are computing. That makes emergency communications systems which might be very volatile and ever-changing, work in a trivial way.

There are lots of other good reasons, but those are the primary ones that I consider. Some others include support for natural languages different from the authors. Opensource, free toolsets etc are also a good thing.

Install Trusted QSL on your new hard drive.
Run TQSLCert and use "File/New Certificate Request".
Fill in your callsign, entity, etc. and when you're done you'll have a
TQ5 file.
Send that back as an attachment to the reply to the LotW person, and
they'll process it for you.

I guess I have to say this over and over to make the point. The
point of Java is that it would be the best thing for all amatuer
radio software to use. Why? Because developers could more trivially
write software that integrates with other software utilizing java's
dynamic class loading facitities. Then on top of that, you'd get to
take advantage of Java's mobile code capabilities which make it
possible for come as you are computing. That makes emergency
communications systems which might be very volatile and ever-
changing, work in a trivial way.

>>>You don't have to say anything over and over again, Gregg, you
just have to say something substantive that makes technical sense. A
string of vacuous marketing buzzwords won't cut it.

>>>Nothing you say above responds to either of the questions I posed.
Instead, you wave your arms about Java's dynamic class loading
facitities making integration between applications trivial. Building
an application that interoperates with LotW is certainly not easy,
but the mechanics of interprogram communication are not the issue.
The LotW client library is low-level and sparsely documented -- more
symptoms of insufficient development resources. Adding higher-level
operations and comprehensive documentation are what's needed --
not "reimplement the whole thing in Java because it would be cool".

>>>Your comments regarding "Java's mobile code capabilities"
and "come as you are computing" making emergency communications
systems "work in a trivial way" are a complete non-sequitur. What
does LotW have to do with emergency communications systems?

There are lots of other good reasons, but those are the primary ones
that I consider. Some others include support for natural languages
different from the authors.

>>>Java provides no particular advantage for supporting multiple
natural languages; look at what the Logger32 team has done using VB.

Opensource, free toolsets etc are also a good thing.

>>>LotW's client library and applications are open source already, Gregg, and you can build these applications using free toolsets.

73,

Dave, AA6YQ

I am needing help getting LOTW going.
I have a Certificate (I think) and trying to put in my station
location.
When I select new it it says "Error: No certificates available"
I go back to the tQSL certificate and load certificate file PKSC#12
and put in the password then it said loading complete.

Root Cert. loaded 0
CA Cert loaded 0
User Cert. loaded 0
Priviate Keys
loaded 1
Config. loaded 0

Any help would be grateful
Terry

When you bring up TQSLCert, do you see any icons for your callsign?
What do they look like? A normal entry shows up as something that looks
like a keyhole; if you're missing the public key part, I think it shows
up in a red circle with a slash through it.
If you're seeing the latter, you should be able to re-download your
certificate from LotW:
1. Log in to LotW.
2. Click on "Your Account"
3. On the account menu, click on "Your Certificates".
4. You should see a list of your LotW calls. Click on "Download Your
Certificates".
5. You should then see a "File Download" dialog box asking "Do you want
to open or save this file?".
6. Click on "Open" and it'll load the public key certificates for your
callsign into TQSLCert.

That should be enough to get it fixed, hopefully.

After my last post I sent an email about this to the Radio Amateurs of Canada (RAC)the Canadian equivalent of ARRL. Our Director of the British Columbia & Yukon Division (Ed Frazer) forwarded my e-mail to President Earle Smith VE6NM who is presently attending the annual meeting of ARRL Directors in Newington with the hope of getting an immediate reaction to RAC becoming officially involved in LOTW.

I'm just beginning to stir the pot up here in Canada to get more Canadian participation - and possibly some Canadian awards tied into the structure.

This is such a gem of an asset for amateur radio that we should not even consider giving up on it. LOTW needs a lot of us to start talking it up - and mentioning it at our clubs, on-air and even better through communications with officials in ARRL.

I'll let you know what reaction I get to my proposal to RAC - and where I go with this next.

Before ARRL puts any work into supporting the few and small Canadian awards, I'd prefer their efforts are put toward the mainline awards like WAZ, WPX, IOTA, etc.

I don't understand what RAC's official involvement in LOTW would mean as RAC is a resource strapped organization in it's own right.

As far as more Canadian involvement is concerned, we are the third largest user of LOTW after USA and Germany http://www.hb9bza.net/lotw/.

I am glad that you took the initiative John, this is too important a project to let fall by the wayside because of a lack of support; financial, staff, subscription and/or otherwise.
If nothing else, at least RAC can show their strong vocal support of the project.
Inclusion of our award programmes can come later, but not too late.

Holey Moley guys! C'mon.

ARRL, Joel Harrison etc have made it clear that LOTW isn't going
anywhere and has the full support of the board and HQ Staff.

LOTW isn't going to disappear or Die! LOTW isn't going to disappear or Die!

LOTW isn't going to disappear or Die! LOTW isn't going to disappear or Die!

LOTW isn't going to disappear or Die! LOTW isn't going to disappear or Die!

LOTW isn't going to disappear or Die! LOTW isn't going to disappear or Die!

Pay attention!!!!! Geeeeeezzzzzz!

Mike, W5UC

Earle,

I think what I was trying to say was that RAC support should be for the overall growth of LOTW to serve the global interests of the ham community first rather than the self interests of us Canadians.

That isn't the issue here. The idea that LOTW has one foot in the grave and the other on a banana peel continues to be promoted here. There appears to be a conscious effort to spread that idea.

Would we all like for there to be more participation? Of course, but the present level of participation does not write the obit for LOTW. How do we raise the level of participation? Damn if I know. I have placed tags on both my web site and my QRZ listing promoting LOTW. However, I do believe that POSITIVE promotion of LOTW will help, and constantly spreading the rumor that LOTW is on it's way to the grave certainly will not encourage participation.

Hi, Gerry:

I hear what you're saying and agree.

Some feedback from my contact at ARRL:

"They would love to support RAC awards. About the only "extra" geographical data they have to put into place that wasn't US based are Canadian provinces.

They'll continue work there to see how they would even go about doing this. Then they can figure out, along with RAC award managers, what sort of information to gather, retain, report, etc. The specifications are probably more difficult than the implementation.

They can't promise anything quickly because there is a lot yet to be done."

Appreciate it if you could relay to ARRL-LOTW@yahoogroups.com - my email to that address bounces.

From my attendance at the ARRL Board meeting this weekend I sense there's a software problem of some kind.

Best I can do at the moment.

Meaningless words remain meaningless, no matter how often they are repeated.

LotW began operation in September 2003 with the DXCC award family. Since then, only one additional award has been added: WAS in March of last year. That's what "full support" means. If things don't slow down, LotW should have WAC by the end of 2008.

What's being stated here are the facts: LotW has barely advanced in the 3+ years since its introduction. The objective is encourage ARRL members to lobby their representatives for a larger investment in LoTW.

What's wrong with that?

Hi:
This is a LoTW FIRST !!!

For those of you that are not LoTW Members, I thought you would like to see what you can do with LoTW and a LOT of "Chair Time" !!!

For those of you that are not LoTW Members, you can't see the message unless you Login to LoTW. Why ??? Ask the ARRL.

One would think this type of publicity would be on the pre-login page for the world to see !!!

In any case, John deserves a lot of credit !!!

********** From the LoTW "News and Notes" **********

Jan 20, 2007: VE3EJ Achieves 9-Band DXCC via LoTW -- John Sluymer,VE3EJ,
has made a lot of contacts!
Maybe this cycle he will work on 6 meters!
Congrats John.
The 9 bander accompanies 251 Mixed countries and 1401 Challenge countries
all confirmed with Logbook of the World.

The message following this one with "Subject: First LoTW 9 Band DXCC, VE3EJ"
has been sent to a number of lists.

I think it behoves us to get the message out to as many NON-LoTW users as possible.

I have re-formatted the table portion to remove the TABS, making it all TEXT to
be readable.

Feel free to send it to your NON-LoTW friends, put it in your club newsletter,
or post it to the lists you belong to.

Change what you want to express your views.

I have already sent it to yccc@... and cq-contest@....

Get the word out "LoTW Works" !!!

Bob, and others...

This is a perfect example of what is holding back further development. A PERFECT example...

Note column 1 "Selected" is full of digits.
Note that column 2 "Applied" is all zeroes.
Note that column 3 "Awarded" is also all zeroes.

Net cash flowing to LOTW? Zero dollars, and zero cents. Value to John? Priceless!

This speaks volumns to me. Does the fact that John has not yet made application to have the credits awarded or in any way diminish VE3EJ's

accomplishment? Nope! Congrats to John for an amazing feat. John gets his bragging rights without spending a nickle. Is this a reflection of John's altruism? Nope! It is a reflection of the benevolence of the ARRL for allowing people to share their accomplishments, garner respect, enjoy the satisfaction of said accomplishments, all for the price of zero dollars and zero cents. Priceless!

My colloquial sense of frontier fairness tells me that LOTW plays a significant role in John's accomplishment, yet LOTW gets zero credit in terms of what is important to all of us--that being funding further development.

I recognized this some time ago in my own DXCC efforts. I have a DXCC on 4 bands, and am close on 80M. I want a piece of paper on my wall. I want the 5BDXCC wall paper design--personal preference I guess. Even though I am not yet ready to make application for the remaining bands/modes, I bought my first 500 credits to get the ball rolling, and to recognize the role LOTW is playing in my effort. Compare and contrast my display with the one above...

Account Status N0FP

Award Selected Applied Awarded Total / Current
Mixed* 2 0 243 245 / 245
CW* 10 0 184 194 / 194
Phone 4 0 169 173 / 173
RTTY 3 0 29 32 / 32
160M 1 0 62 63 / 63
80M 1 0 77 78 / 78
40M 1 0 101 102 / 102
30M 11 0 6 17 / 17
20M* 31 0 153 184 / 184
17M 7 0 8 15 / 15
15M 0 0 144 144 / 144
12M 4 0 3 7 / 7
10M 0 0 117 117 / 117
6M 2 0 0 2 / 2
2M 1 0 0 1 / 1
Challenge 58 0 671 --- / 729
* = Award has been issued

The difference is, I spent the $75.00 to buy 500 credits, applied 384 of them in a hybrid application, mailed in or had card checkers verify 287 paper cards, and have 116 credits remaining in my account. Now I can view the results with a clear conscience knowing I have paid something for the benefit of having LOTW host my 30,080 QSO records on their system and make the needed matches. I still don't have a DXCC endorsement for any band other than 20M, which was garnered at the W0DXCC conference a few years ago (all 20M CW). But I wrote them the $75 check just to be able to help further the budget constraints that seem to be holding us back in further development.

The point is, how many others are using LOTW in the same way as VE3EJ? This is not a reflection on John, it is a reflection on the way this works in the hearts and minds of those that are using LOTW every day. I would encourage all those who read this to consider their involvement, their commitment, and write a check today to purchase some credits to demonstrate your commitment to the Board of Directors at the ARRL.

If you're asking "will ADIF add fields like LOTW_QSL_RCVD and LOTW_QSL_SENT?", the answer is "probably not". I proposed the addition of these fields and equivalent fields for eQSL.cc, but the ADIF development community voted "no".

As a result, logging developers are using application-specific tags to capture this information, e.g. APP_DXKEEPER_LOTW_QSL_SENT and APP_LOGGER32_LOTW_QSL_RCVD. This places more of a burden on users when moving log information from one application to another.

What was the argument for voting no. Even if they were against promoting a specific organinzation, generic fields could have been created for use across different logging programs such as

ONLINE_QSL_SENT_1
ONLINE_QSL_RCVD_1
ONLINE_QSL_SENT_2
ONLINE_QSL_RCVD_2

This was multiple systems could have been supported.

I agree with you Ford. I did the same thing just after Jan 1. I decided at least once a year to apply all credits that were new. It should become smaller each year as I apply more credits. Besides dxcc credits I went ahead and applied for a basic WAS. Having 20 countries doesn't do much but except put a couple of $$ toward lotw. I originally bought 250 then bought more when I applied. I have had 5BDXCC for over 20 years but decided to start over with LOTW. Makes things interesting again.

One other point is the VE3EJ may have no interest in any awards. He like some of the other big contesters have worked everything many times. He may just be uploading for other's benefit which is what we all try to encourage non users to do.

One need not supply an argument for voting no. Some application supplier want to minimize additions in general in order to minimize development costs.

By the way, one really wants 4 fields for each QSL service: QSL_SENT, QSL_RCVD, QSL_SENT_DATE, and QSL_RCVD_DATE.

Would someone please explain the motivation for these fields in an ADIF
file.

Isn't the local logging program the place to keep track of all this stuff?

I guess I'm look at things simply.

1)Linking DXCC records on the ARRL site tells me what I have confirmed.
I could care less whether it came from LOTW or cards.

2)If you want to know what you have from LOTW, simply keep the
downloaded records in a separate logbook file.

3) As far as LOTW sent. I upload everything. Thus every QSO is LOTW
sent. No need for it in a field.

4)Why does anybody care when a QSL was received? Either you have it or
you don't. The date received is irrelevant. LOTW does provide info
when a 'qsl' arrived.

Hi Prasad,

No, I don't do that. LOTW gives the date and last QSO uploaded. I just upload from that point onward.

I meant to say that every QSO gets uploaded to LOTW -- but only once!

You misunderstand, Brian. An ADIF file is not an alternative to a logging application; its a means for transferring log information from one logging application to another.

Maintaining a separate logbook file for LotW confirms certainly works, but is not very convenient for assessing one's overall DXCC award progress.

Keeping track of "date sent" and "date received" is often helpful when recovering from mistakes. If you don't ever make mistakes, then you won't need these fields.

Dave,

I guess we really disagree. I don't like clerical work and strive not to do things rather than to create complicated processes.

Dave Bernstein wrote:
> You misunderstand, Brian. An ADIF file is not an alternative to a

> from one logging application to another.

Only case that the info you are suggesting is useful would be going from one logbook program to another. Still the fields suggested are pretty much useless-- unless one likes to count how many angels can fit on a head of a pin.

> Maintaining a separate logbook file for LotW confirms certainly
> works, but is not very convenient for assessing one's overall DXCC
> award progress.
>
Award progress is easy. Link your DXCC records to LOTW. Then look at the ARRL LOTW web page under AWARDS. You can see your DXCC, Challenge and WAS status broken down by band, mode in full detail. Besides it's official. Yes, it doesn't contain the stations you worked but don't have confirmation for. However, till you actually have a confirmation, the worked ones really don't count for much.

You misunderstand the purpose of maintaining a separate LOTW logbook. It is only a curiosity. One can certainly import LOTW QSO's to the main logbook. They ought to be there anyhow! In concept improting LOTW QSL's should only change the QSL status. Unfortunately, some logging programs also change other fields possibly screwing up things -- e.g. zone. Many EU LOTW QSL's have ITU zone instead of CQ zone in the CQ zone slot.

> Keeping track of "date sent" and "date received" is often helpful
> when recovering from mistakes. If you don't ever make mistakes, then
> you won't need these fields.

Huh? Give me an example. I could care less when I sent something out. If it comes back, fine. If it doesn't fine, work somebody else and send them one. It can't see how it is a mistake issue. Postage is too expensive to send out multiple requests on people who don't reply to the first.

3537. RE: [ARRL-LOTW] First LoTW 9 Band DXCC, VE3EJ

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-24 02:06:29 UTC
From: R Johnson
Topic: 3523 Message: 3537
Attachments: 1 described; binary payloads are missing from this source WARC

Ford:
I think your judgmental views of VE3EJ is TOTALLY unwarranted !!!

You are making a lot of assumptions based on something that you have absolutely no knowledge of the facts !!!

Remember that LoTW dated this message on 1/20/07, but I don't know when LoTW actually posted it on their site. I didn't see it on Sunday, in fact I didn't until Monday afternoon.

Give John a break, at best he has ONLY had 2 days, one of which was Sunday, to make any decisions or even find out HOW to apply for his 9 Band DXCC. If he hasn't logged into LoTW since last week/month, he may not even know he got 9 Band DXCC.

You don't even know if he wants to apply for the Award, maybe he has done it twice over on "Paper". I don't know and neither do you !!!

We DO know that he gave out a minimum of 1402 "LoTW Matches" to other Hams.
We don't know how many others !!! I have many multiple "LoTW Matches" for the same country, but I only need ONE to count for DXCC. If I got 100 "DL" matches, I only need one, BUT at least 100 "DL's" got matches that they might need !!! The bottom line is that we don't how many "LoTW Matches" John made possible and how many $$$ he brought into the LoTW account by just uploading his logs.

Regarding some your other statements:

"Note column 1 "Selected" is full of digits". What else would you expect ???
The word "Selected" is a misnomer !!! A better choice of words would have been "Worked" or "Confirmed" !!! "Selected" means that it was picked out, which is not the case with LoTW, it just means "MATCHED" nothing else !!!

"Does the fact that John has not yet made application to have the credits awarded"
You don't know that !!! Remember that's it only been 2 days since made 9 Band DXCC.

"Net cash flowing to LOTW? Zero dollars, and zero cents. Value to John?
Priceless!"
You don't know that !!!

"John gets his bragging rights without spending a nickle."
You don't know that !!!

"The difference is, I spent the $75.00 to buy 500 credits"
How do you know that John DIDN'T ???

"The point is, how many others are using LOTW in the same way as VE3EJ? This is not a reflection on John"
You sure make it sound that way !!!

IMHO, I don't belive that John, VE3EJ deserves any of the aspersions regarding his LoTW involvement that you have alluded to by innuendo.

Bob spewed:

Ford:
I think your judgmental views of VE3EJ is TOTALLY unwarranted !!!

****

Bob,

I have no idea how you could read into my posting as being critical of John. I went out of my way, bent over backwards, and described in great detail how this is not a John issue. Quite the contrary. My posting was designed to illustrate that there are many who may be using LOTW and waiting in the wings to get enough into the system to actually do an application. How you can interpret my comments as being critical of John is beyond belief. Please, if you are offended at my posting, read it again.

From: Dave Bernstein
Topic: 3517 Message: 3539

I don't like clerical work either; that's why I provide software whose automation minimizes clerical work.

Suppose you'd like cluster spots colored to identify those that if worked would give you a new entity, entity-band, or entity-mode. In order to do that, you need to know which entities, entity-bands, and entity-modes are already confirmed -- confirmed via QSL card, or confirmed via LotW. As you point out, the LotW confirmation information is interactively available via the LotW web site, but there's no programmatic interface available to this information. The only way a logging application can obtain this information is to recreate it by first downloading all LotW confirmations from the ARRL site. Performing a vanilla ADIF import would produce a correct understanding of DXCC award status (permitting accurate spot coloring), but would create duplicates in the log. The approach used by many logging applications is to have each QSO maintain separate confirmation status for cards and LotW, and populate the LotW status with information downloaded from LotW.

Maintaining both card and LotW confirmation information is also useful when generating the paperwork for a DXCC submission. For a user with some QSOs confirmed via QSL card and other QSOs confirmed via LotW, the logging application can generate separate record sheets: one to be submitted with the cards to the DXCC desk, and the other to "drive" the user's session on the LotW web site.

When a logging application downloads information from LotW, it should compare the logged information with the downloaded information, e.g. CQ and ITU zones. In the case of a conflict, it should present the information to the user for resolution.

You don't care when you sent out a QSL card that requests a needed confirmation? Isn't it useful to have a "QSL aging report" that shows you all outstanding QSLs so you can periodically decide whether to send out a second card, or send a card to an alternate source of confirmation for the needed entity, entity-band, or entity-mode? It took me 3 tries over the last 7 years to get Turkmenistan confirmed on 30m.

The sorts of mistakes to which I'm referring most often occur when users perform multi-QSO edits of log databases or ADIF files without first making a backup.

73,

Dave, AA6YQ

Topic: 3523 Message: 3540

Guys,

For what it is worth. Consider the following.

John has 347 confirmed mixed, 346 confirmed phone and 340 confirmed CW.

It is very likely that LOTW generated ZERO new ones for him.

From the ARRL listing I can't tell if John never linked to this DXCC
records or the ARRL deleted the columns to keep John's totals from
public view. Either way the columns would be zero's.

I know a local DXer who have over 327 confirmed on all bands but 160.
He sees little point to using LOTW since it will generate no hits. It
is cheaper for him to spend the $2.84 for the few new ones he may
uncover than to buy a bunch of credits from LOTW.

Knowing how motivated VE3EJ is, my guess is that he wanted to be first
to complete 9 Band DXCC via LOTW-- although there is no award for doing
so. The interest is in the hunt.

3541. RE: [ARRL-LOTW] First LoTW 9 Band DXCC, VE3EJ

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-24 12:37:24 UTC
From: Nenad Stevanovic
Topic: 3523 Message: 3541

Brian,

If you recall my posting the other day about LoTW as
as a service, you actually described the reason for its
failure as a SERVICE.

The way it is desing, it is perfect tool for someone
who starts from zero, and has huge number of confirmations.
As you said we are all old-timers, with few endorsments,
and standard mail is still cheaper.

73 Nenad VE3EXY

P.S. John sends about 4-6 kg of QSLs every year
only in response to incoming requests.

Maybe his motvation for submitting logs
is to reduce costs, by
reducing the number of incoming QSLs.

-----Original Message-----

records or the ARRL deleted the columns to keep John's totals from
public view. Either way the columns would be zero's.

I know a local DXer who have over 327 confirmed on all bands but 160.
He sees little point to using LOTW since it will generate no hits. It

3542. received today: JT1CO via LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-24 12:52:26 UTC
From: FireBrick
Topic: 3542 Message: 3542

Among the group of LoTW qsls I received today were:
3 qsls from JT1CO

And even though I don't get new band/mode confirmations very often.

There was one in that group for 30 meters and LoTW also indicated it was
also good for 'Challenge'

So some of those 100 plus 'credits' I bought 3 years ago will be used after
all.

Thanks for the qso and qsl Chak.

PS: I'm glad that my software will indicate that it was a 'LoTW' qsl, and
also indicate when it was received, and what band it's good for, and what
mode it's good for, so I don't have to do the paperwork and don't waste
money and time trying to send for the hardcard.
I'm also glad that software like Dave's does all that paperwork for me which
minimizes errors in the submission/record process.

I'm also glad that ARRL created LoTW so that I can get this qsl most
economically.

While I have been dxing for many years, and have achieved a few personal
goals, I don't have paper on my walls, but pursue goals for my pleasure, to
keep up my interest, and to try new techniques, tools, and improve my
skills.

But....
I wish the ARR: would kick it into 2nd gear and promote, recruit, and make
the system more attractive to newcomers.
Three plus years of minimal growth, would get you fired in the NFL, demoted
in the Board Room, and is only good enough for politicians.

You're getting old when you're sitting in a rocker and you can't get it
started.

Hi Bob,

I did a quick scan of the 2005 annual report. The information you are looking for is far too granular a detail to extract it from public information. Even the IRS form 990, which is public information but pretty boring and available only by request, is going to be prepared in summary fashion. My guess is that board minutes may include references that hint at the number you are looking for, but it is doubtful you will find a rifle shot answer. And those would likely be old numbers anyway.

My gut tells me that the number you are looking for may not exist as a number. For example, the personnel involved are active in all aspects of web design and administration. The server is used for the entire web site. Administrative staff oversee LOTW and other areas of administration. I seriously doubt the granularity exists. Think about it... What does an additional 50GB of server space cost? Almost nothing. Yet the actual cost attributable to LOTW would be a seemingly arbitrary allocation of all overhead. If it were me wearing the bean counter's hat, my initial question to you would be "How much do you want it to cost?" And I would simply back into the number from there... No kidding...

I would contact Jay Bellows (our Dakota Director) and run it by Jay. I'm fairly certain you will be met with numerous queries about why you want to know. ARRL is not required to disclose the number to my knowledge. As an Accountant, I can assert that NO number will be publicly disclosed if it is not required. The requisite cost accounting simply costs too much to be worthwhile. Jay may be aware of specific estimates based on business plans approved when it started up. Based on your need to know, he may be able to make a phone call to the right person to get a hip shot at the number.

3546. question for the LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-24 19:35:33 UTC
From: FireBrick
Topic: 3546 Message: 3546

It's become apparent that some people have been uploading their entire logs, even if previously uploaded.
This is unnecessary unless the additional uploads had more complete or corrected location/zone/ data.

But I have the opposite question.
Depending on how much operating I've done, I tend to upload a couple times a week.

Is this too much and also causing a drag on the system.
I usually do this in early weekday mornings, and have not noticed any delay in my upload being accepted.

What's the consensus on this.

I do it so that in case of computer malfunction, I'm safe, even though I backup so often as to be almost anal. (ok...not almost, I am anal about backing up).

So as Bill O'Reilly says' "What say you people". "I'll give you the last word!"

"The steady state of disks is full.

I have all ready had to use LoTW as my back-up log due to a fairly recent hard drive crash, since then, I upload at the end of each day that I am on the air, and just the new contacts that had not previously been uploaded.
While that may seem to be too often, it serves as my log back-up, and the uploads take very little time. having worked for a local interenet company, I know that that is how bandwith sharing is accomplished , a lot of people on the network at one time, but actual data transfer (web pages) is in small bursts, its the big file transfers that tend to clog things up.

A daily upload should be fine.

DXKeeper can automatically upload each QSO to eQSL.cc as it is logged,
completely eliminating the need for the user to ever think about uploading.
I thought about providing this option for LotW, but decided against it to
avoid overloading the LotW server.

For what it's worth, optimizing LotW to accept batches of QSOs rather than
individual QSOs in real-time was a design error. Any system that depends on
good behavior from its users is on shaky ground; its not that users are
malicious, they are simply ignorant of what constitutes good and bad
behavior.

Dave,

You obviously are not a contester who makes thousands of QSO's during a contest. I doubt any of them would be interested in uploading their contacts real time to LOTW.

It appears to me that contesters are the biggest users of LOTW. Thus optimizing for the batch mode was the correct thing to do.

3552. Re: question for the LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-25 03:47:57 UTC
From: Dave Bernstein
Topic: 3546 Message: 3552

Contesters may well upload more QSOs to LotW than other users, but they probably generate fewer upload batches than other users; they typically upload one large batch at the conclusion of each contest.

Let's assume that you're right. Based on this revelation, I and several other developers of logging applications optimized for DXers and general operators conclude that we can increase the convenience of our applications to our users by automatically uploading each QSO to LotW as its logged; after all, this would be just a drop in the bucket compared to the load generated by contesters. The upload can be implemented as a low-priority background process, thereby minimizing any performance impact on the user's PC.

As a result, the LotW server becomes swamped because of the overhead of accepting a connection, uploading a file, decrypting the file, and closing the connection is now amortized over 1 QSO instead of the current N -- except immediately after contests, when the large uploads increase its efficiency (but dramatically reduce its response time).

The LotW team can't tolerate this effective reduction in capacity, so they modify the LotW code to refuse to accept QSOs uploaded in a batch containing fewer than 4 QSOs. This pushes LotW support for WAC from 2008 to 2009.

We logging application developers won't be overcome so easily; we modify our applications to automatically upload a batch of 4 QSOs after each logged QSO -- the new QSO, and 3 bogus QSOs with TE1ST that our applications will automatically ignore when downloading from LotW. Effective LotW server capacity drops again, and the LotW team has to waste more time figuring a way to protect their servers. LotW support for WAC moves out to 2010.

Does this still sound like the right design?

A more appropriate design would

-- efficiently upload, accept, and match a single QSO, returning the results to the user in real-time (eliminating the current repetitive "are they accepted?" transactions and often eliminating the "is it confirmed?" transaction).

-- accept a batch of uploaded QSOs, schedule this batch for low-priority background processing, and return the results to the user when complete (eliminating the current need for repetitive "are they accepted?" transactions).

>Ford-N0FP

Ford sidesteps:

Ford, I did reread your message twice before I even replied the first time.

I have reread it again and I think these two paragraphs you wrote sum up why
I made the comments I did !!!

Ford wrote:

"Net cash flowing to LOTW? Zero dollars, and zero cents. Value to John?
Priceless!

This speaks volumns to me. Does the fact that John has not yet made
application to have the credits awarded or in any way diminish VE3EJ's
accomplishment? Nope! Congrats to John for an amazing feat. John gets his
bragging rights without spending a nickle. Is this a reflection of John's
altruism? Nope! It is a reflection of the benevolence of the ARRL for
allowing people to share their accomplishments, garner respect, enjoy the
satisfaction of said accomplishments, all for the price of zero dollars and
zero cents. Priceless!"

I still maintain that in your first paragraph, you are implying that VE3EJ didn't pay ZIP to LoTW and is reaping the all the "Priceless Results".

In you second paragraph, you seem to criticize VE3EJ for not having made application fast enough for LoTW credits (within 2 days) to satisfy you.

Then you said "Congrats to John for an amazing feat. John gets his bragging rights without spending a nickle.", I interpret this as "Nice Job Freeloader" !!!

If you wanted to make a point about LoTW and $$$, I think you should have left John completely out of this discussion !!! After all you don't know anything about John's financial dealings with LoTW !!!

A simple "Atta Boy John" or "Well Done John" would be more in line with complementing him, instead of bringing him up in a dissertation on "LoTW Freeloaders" !!!

Yes, I am offended, for John.

3554. Re: [ARRL-LOTW] LoTW annual budget?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-25 04:45:48 UTC
From: Robert Chudek - K0RC
Topic: 3544 Message: 3554

Ford,

Thanks for your reply. I know you know how to "count beans". I started reading the Annual Report but fell asleep at page 5. When I woke up I didn't remember what I was looking for.

As an IT manager, I had to prepare an operating budget and assign dollar values to future projects. It wasn't rocket science, but it wasn't precision numbering either. Fifty grand for this, a couple hundred grand for that, and by the time it was all added up and brought before the financial committee, there was some serious money on the table (millions). LoTW would have been one line item for me with a $ value attached. A project number would be assigned and charges could then be applied throughout the year. This is simple Business 101 and Project Management in the corporate world.

Where I was going with this was to see if a reasonable "minute burden rate" could be determined for LoTW. For example, IF $500,000 was the annual budget for LoTW then you could figure 1 minute of LoTW processing time cost about 95 cents (calculated from: 365 days X 24 hours X 60 minutes = 525,600 minutes in a year). Divide the $500,000 budget by the minutes and you come up with a little under a buck. Or divide again by 60 and you get a little over a penny and a half per second of processing time.

Knowing the burden rate, each LoTW user can then calculate the cost to process their LoTW log(s). Each upload report shows the number of seconds eaten up. Here's an example of my first upload: 5,571 records, producing 1,722 confirmations (a 31% hit rate) in 872 seconds. In my example, that's a $13.82 budget hit.

Where this becomes important, and a real money sink, is (re)processing duplicate logbook data. I made the mistake of uploading a 6,542 QSO log that contained 6,238 dupe contacts. The net gain was only 304 QSO's. My faux pas consumed 8,442 processing seconds, for a $133.85 budget hit. Fortunately, LoTW has enough front-end intelligence to abort uploads that are true duplicates.

My intent is to put some "reasonable numbers" together to show why ARRL is making a big deal out of managing the LoTW resource.

Of course I'm over simplifying all of this. But when you start talking about hundreds of dollars being wasted, it tends to get peoples attention.

So... let's speculate away...

Dave,

I can't see any benefit to the "real time QSO upload". Instant gratification? It depends upon both ends of a QSO being "real time".

Again you're pushing for something that is a low probability event. This is the same reason the ADIF people rejected your suggested mods to ADIF file format.

BTW have you ever created an ADIF file for 10K QSO's. It is really bloated. It doesn't need more fields for even greater bloat. You know not everybody in this world is broadband.

I also don't think you've done very many uploads to LOTW. Over the past years since the inception of LOTW I've done several hundered- both small (about 10) and large (thousands) uploads. The response is very good. The smaller ones get into the system in a few seconds (after upload). Sometimes larger ones are spooled (especially contest weekends or when system maintenance is being done) and delayed up to hours. So spooling already exists. When not spooled it is only a matter of a minute or two for the larger files to get into the system.

I see nothing wrong in having a system that works well for users supplying the bulk of its contents. Apparently you do because of some kind of personal crusade.

I don't think the system was ever intended to be a Bank of America transaction oriented system.

Anyhow, apparently the LOTW system is running quite a bit below capacity now.

THEIR PROBLEM IS GETTING MORE USERS NOT THROUGHPUT. Instant gratification isn't the issue. Acceptance by "not invented here" types is. So is the clumsy setup by the user. If they had a setup WIZARD to handle the mess, there also would be more users. If money is to be spent on anything (doubtful), such a WIZARD would the the biggest bang/buck.

I'm sure they would be ecstatic to have so many users that response time becomes an issue.

3556. RE: [ARRL-LOTW] First LoTW 9 Band DXCC, VE3EJ

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-25 16:48:09 UTC
From: Ford Peterson
Topic: 3523 Message: 3556

...snip...

A simple "Atta Boy John" or "Well Done John" would be more in line with complementing him, instead of bringing him up in a dissertation on "LoTW Freeloaders" !!!

Yes, I am offended, for John.

73
Bob, K1VU
****

Bob,

Atta Boy John. Well Done John.

There... You happy now?

If the "freeloading" shoe fits John, then so-be-it. If it fits you, and you are really just lashing out at me to appease your conscience, then so-be-it. Do us both a favor. Next time you see a post from me, just hit the delete key and save both of us from each other. Having re-read my post several times, you obviously don't get the point. It was not, is not, never was, about John's accomplishment. He apparently doesn't need LOTW and that's just fine by me. I appreciate getting confirmed by his uploads. It always was about the people waiting in the wings to actually make an application for a DXCC award and participate with revenue, instead of contributing to overhead. I strongly suspect that there are many active participants who do not yet contribute to the LOTW bottom line. Whether they are freeloading is a personal issue that must be answered by each user. If the intent is to use LOTW to participate in a very length DXCC chasing process, or if they are using LOTW as a useful tool for backup, or if they are using the reports to monitor progress and reaping some benefit from that, then I encourage them to buy credits at as early a point as possible--for cash flow reasons. Connect the dots Bob.

If the freeloading shoe fits anybody reading this posting, then do something about it. Whether your name is John, or Bob, or Sam, or Steve, or McGillicutty.

Bob...I'm sure that John is forever in your debt now that you provided me a public tongue lashing in an attempt to straighten me out. Shame on me for attempting to get people off their duffs and participate with their wallets. Perhaps you can describe for all of us what you have done for LOTW today. Better yet, don't respond at all...

Have a great day Bob. KMA

Dave,

I can't see any benefit to the "real time QSO upload". Instant gratification?

>>>No - automation. If clicking the Log button automatically uploads the QSO to LotW and determines that LotW has accepted that uploaded QSO, then the user need never perform those actions manually. In contrast, a DXKeeper user today must remember to periodically click "upload to LotW" and "SyncLotWQSOs".

It depends upon both ends of a QSO being "real time".

>>>Not true, Brian. You can upload your QSOs and verify their acceptance independent of their confirmation by your QSO partner.

Again you're pushing for something that is a low probability event.

>>>The question that began this thread was Bill W9OL's "is it okay to upload each day?". Once a day is not a low probability event.

This is the same reason the ADIF people rejected your suggested mods to ADIF file format.

>>>Since you are not a member of the ADIF development community and have participated in none of its discussions over the years, I'd be interested in how you reached this conclusion. Incidentally, several logging applications have implemented these as private (non-interchangeable) tags.

BTW have you ever created an ADIF file for 10K QSO's. It is really bloated. It doesn't need more fields for even greater bloat. You know not everybody in this world is broadband.

>>>Yes. I have been involved with LotW since it entered beta test; at that time, my primary log contained ~15K QSOs, and I uploaded them en masse.

>>>ADIF was designed to enable amateurs to move QSOs from one logging application to another -- typically via disk files. It was the ARRL's decision to use it as the representation for information being uploaded to and downloaded from LotW -- probably because it immediately enables most logging applications to at least support uploading. Yes, text-oriented representations are "big" compared with

encoded representations, but I think the LotW development team made the correct tradeoff. A new representation optimized for compactness would have created a nasty chicken-and-egg scenario between support from logging application developers and users; by choosing ADIF, the ARRL eliminated a potentially showstopping impediment to LotW adoption by immediately accepting uploads from tools already in users' hands.

>>>The uptake of broadband across the general population is rising faster than most observers predicted. Music, VOIP, games, and video will continue to drive this trends. Even if hams are late adopters, their kids aren't.

I also don't think you've done very many uploads to LOTW.

>>>There's no way for you to know that, and you are wrong. I upload QSOs from my primary log at least weekly. All of my FJ/AA6YQ, KP2/AA6YQ, and KH6/AA6YQ QSOs have been uploaded; in aggregate, that's more than 20K QSOs. Given the large numbers of LotW users among the DXLab user community, I am made continuously aware of the issues that LotW users encounter.

Over the past years since the inception of LOTW I've done several hundered- both small (about 10) and large (thousands) uploads. The response is very good.

>>>Then you've been lucky. There have been many multi-day LotW outages, and there have been many times when uploaded QSOs have not been accepted for days.

The smaller ones get into the system in a few seconds (after upload). Sometimes larger ones are spooled (especially contest weekends or when system maintenance is being done) and delayed up to hours. So spooling already exists. When not spooled it is only a matter of a minute or two for the larger files to get into the system.

>>>"Spooling" is a term typically applied to the batch processing of printer requests.

I see nothing wrong in having a system that works well for users supplying the bulk of its contents.

>>>I assume you are referring to contesters. If contesters are LotW's primary users, why has the ARRL focused on connecting LotW to the DXCC desk's award tracking system, and shown no progress toward automated scoring or submissions for ARRL contests?

Apparently you do because of some kind of personal crusade.

>>>My crusade for high-quality, easy-to-use software began long before LotW's conception. Nothing improves without criticism; aim low, and you'll hit the ground every time. Defensiveness is not a useful response; I encounter much more of it from "LotW supporters"

than from the LotW development team.

I don't think the system was ever intended to be a Bank of America transaction oriented system.

>>>The ARRL was far more concerned with security than useability. With enough development resources, this tradeoff might have worked out okay. With barely enough resources to operate the system, the negative impact on user uptake is obvious.

Anyhow, apparently the LOTW system is running quite a bit below capacity now.

>>>On what data do you base this conclusion?

THEIR PROBLEM IS GETTING MORE USERS NOT THROUGHPUT. Instant gratification isn't the issue. Acceptance by "not invented here" types is.

>>>I have spent a large amount of time providing a fully-automated easy-to-use interface to LotW within DXlab. While I would have preferred a different design, this hasn't stopped me from providing comprehensive support for LotW.

So is the clumsy setup by the user. If they had a setup WIZARD to handle the mess, there also would be more users. If money is to be spent on anything (doubtful), such a WIZARD would the the biggest bang/buck.

>>>A wizard to cover the setup and renewal scenarios would indeed be helpful. When will you have one ready for testing, Brian?

3559. Re: [ARRL-LOTW] LoTW annual budget?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-01-25 19:01:38 UTC
From: Robert Chudek - K0RC
Topic: 3544 Message: 3559

Ford,

All of what you said is true and that's why I included... "Of course I'm over simplifying all of this."

The true cost will never be know because, as you said "...subject to interpretation and (the numbers) are easily abused..." Can you say "Sarbanes-Oxley"? It was always "interesting" when the end of the budget year approached, managers would scour the budget reports looking for left over funding. Then the "campaign" would start to acquire these funds to prop up any of their own projects running over budget. This was my experience in a Fortune 100 company - to be an effective manager, you needed to be a part-time politician! But I digress (too)...

The basic point I was trying to make here, hidden in all my verbiage...

A clean upload of 5,571 net records into LoTW cost - $13.82
A duped upload of 309 net records into LoTW cost - $133.85

Move the decimal point anyplace you like, that isn't my point. In my example the "unit cost" of a clean upload was $0.0025 (1/4 penny) per record. For the bad upload it was $0.4332 per record (nearly a half a buck). There's a huge disparity in "resources" needed, depending upon the quality of the uploaded file. Whether the resources are sitting idle or not, eventually this will "catch up" and require funding to address the issue. The reality is, many users already complain how slow the system is after a big contest weekend.

I am reconciling my logs from the past 12 years and have found a lot of "issues" created by users of the LoTW and eQSL systems. I include myself in this group. But that's a topic for a different thread. I'm waiting to see what the March 2007 issue of QST says about LoTW.

73 de Bob - KØRC in MN

Subject: RE: [ARRL-LOTW] LoTW annual budget?

Bob wrote:

. ..snip...

Knowing the burden rate, each LoTW user can then calculate the cost to process their LoTW log(s). Each upload report shows the number of seconds eaten up. Here's an example of my first upload: 5,571 records, producing 1,722 confirmations (a 31% hit rate) in 872 seconds. In my example, that's a $13.82 budget hit.

Where this becomes important, and a real money sink, is (re)processing duplicate logbook data. I made the mistake of uploading a 6,542 QSO log that contained 6,238 dupe contacts.

The net gain was only 304 QSO's. My faux pas consumed 8,442 processing seconds, for a $133.85 budget hit. Fortunately, LoTW has enough front-end intelligence to abort uploads that are true duplicates.

My intent is to put some "reasonable numbers" together to show why ARRL is making a big deal out of managing the LoTW resource.

Of course I'm over simplifying all of this. But when you start talking about hundreds of dollars being wasted, it tends to get peoples attention.

So... let's speculate away...

73 de Bob - KØRC in MN
****

Cost allocations in the manner you describe are always subject to interpretation and are easily abused. I remember doing a cost analysis to figure out how much it cost Norwest (now Wells Fargo) to issue a company check to pay a bill. Back in 1985, that number ended up being $65. 9 clerks, 2 supervisors, office space, computer charges, benefits, coffee breaks, copiers, postage, office supplies, for a year, divided by the number of checks issued for the year. Now, the real issue is what was the marginal cost of an additional check? Virtually all the costs would be incurred anyway. So maybe $1.10 for some paper, postage, and a few seconds of a clerk's time? The range is $1 to $65 per check depending on how you look at it. And reducing the number of checks only serves to allocate a higher cost to the remaining checks. Without care, you could interpret writing more checks as being cheaper! On a per check basis it would be... I digress...

Ditto for allocation of computer time. Do you charge back by CPU Seconds? By QSO record? By bandwidth consumed? Personnel preoccupied? ARRL buys bandwidth in a bundle of goodies. That bandwidth sits dormant much of the day. There are 24 hours of CPU every day--whether it's keeping the time-of-day or sorting QSO records. Everything is always available for serving up home pages, LOTW downloads, eMail, etc. Same with hard drive space. Once you put a thousand terabytes on-line, what's the cost of an additional QSO record? You can't even measure a number so small--a few watts per year maybe?

The Marginal Cost is what the BoD cares about. What changes if LOTW goes away? At this point, revenue flow would stop, and all the fixed costs would remain. It isn't going away guys. But expanding LOTW is another issue. That requires additional overhead to be diverted from projects and assigned to LOTW duties. If the available resources are inadequate to cover day-to-day activities, then there is no gas left in the tank for expanding LOTW. That's the situation we appear to be in today. The back room techno-weinie operations are tapped to capacity. More overhead is needed to expand.

Hi Ford:
Regarding your statement about John VE3EJ,
"He apparently doesn't need LOTW and that's just fine by me."

I curious just how you arrived at this conclusion, is just another assumption
on your part, or did you consult your "Crystal Ball" or "Ouija Board" ???

What did I do for LoTW today ???
I wrote an article on "How to Setup TQSL's "Station Location".
Then I helped a Ham renew his expired certificates.
Lastly I helped another Ham add his missing CQZ and ITUZ data to TQSL.

Did you do anything positive for LoTW today ???

BTW:I'm familiar with the "Q" signals, but I don't know the "K" signals.
Could you please define "KMA" for those of us that are ignorant in such matters.
After all I think it behoves all Hams to try to learn as much of "Good Communications"
as possible.

While you gentlemen continue your pissing contest, please let me ask
a question. Does DX Lab support both cabrillo and ADIF? I enjoy
participating in some of the contests sponsored by the League (both
VHF & DX), but they only allow uploading of logs in cabrillo
(fortunately the LOTW creators were smart enough to support both) ,
and my logging program only supports ADIF, therefore I don't send in
logs. I need a SIMPLE way to get the output of my logging software
from ADIF to cabrillo. (and NO, I don't want to change logging software)

Topic: 3546 Message: 3563

Mike,

For converting ADIF to Cabrillo, try:
http://www.ka5wss.com/Software/LogConv/Documentation/matrix.htm

Inexpensive but depending on the contest (and cabrillo format) it
may be what you need. The problem with Cabrillo is that it is not
a "standard" format - each contest has a different format depending
on the exchange and the sponsors' whims.

It is also possible to use Excel to manually convert ADIF to
Cabrillo (or vice versa) with a little work. Once you have the
format for a contest you can use it in subsequent years or modify
it slightly for similar contests.

I received more than a dozen LoTW qsls within minutes of the end of BARTG contest.
RTTY/PSK ops have been among the most active in LoTW postings since the beta testing.

Was just wondering if an additional parameter in the 'signing' process would be warranted indicating the 'Activity' that reflected the activity involved in this qso.

As most logging programs, both standard or contest based, have the ability to title a activity such as '07 BARTG Sprint' or '07 VU7RG DXpedition', it might be worthwhile to include this type of info into the LoTW qsl.

A adif field such as: 'Notes' or 'Contest' that could be included in signing data.
Obviously this would not be a compulsory field.

If someone knows how to contact the .adif 'committee', please let me know or forward this suggestion.

If the idea is stupid...then forget I asked. LOL

"Trying to establish voice contact - please yell into keyboard."

ADIF does define a CONTEST_ID tag and a set of valid values for this tag; see

http://www.adif.org/adif218.htm

The CONTEST_ID tag is intended to capture the contest name. There is also a COMMENT tag that can be used to capture additional activity information. Thus no extensions to ADIF would be required to implement your suggestion.

At present, LotW ignores any CONTEST_ID or COMMENT tags present in uploaded QSOs.

I participate in the ADIF developer's forum, and would be happy to present any requests or suggestions posted here whether I happen to agree with them or not. Jon KE3Z, who leads the LotW Development team, is also a member of the ADIF developer's forum.

Bob wrote:

. ..snip...

Knowing the burden rate, each LoTW user can then calculate the cost to process their LoTW log(s). Each upload report shows the number of seconds eaten up. Here's an example of my first upload: 5,571 records, producing 1,722 confirmations (a 31% hit rate) in 872 seconds. In my example, that's a $13.82 budget hit.

Where this becomes important, and a real money sink, is (re)processing duplicate logbook data. I made the mistake of uploading a 6,542 QSO log that contained 6,238 dupe contacts. The net gain was only 304 QSO's. My faux pas consumed 8,442 processing seconds, for a $133.85 budget hit. Fortunately, LoTW has enough front-end intelligence to abort uploads that are true duplicates.

My intent is to put some "reasonable numbers" together to show why ARRL is making a big deal out of managing the LoTW resource.

Of course I'm over simplifying all of this. But when you start talking about hundreds of dollars being wasted, it tends to get peoples attention.

So... let's speculate away...

73 de Bob - KØRC in MN
****

Cost allocations in the manner you describe are always subject to interpretation and are easily abused. I remember doing a cost analysis to figure out how much it cost Norwest (now Wells Fargo) to issue a company check to pay a bill. Back in 1985, that number ended up being $65. 9 clerks, 2 supervisors, office space, computer charges, benefits, coffee breaks, copiers, postage, office supplies, for a year, divided by the number of checks issued for the year. Now, the real issue is what was the marginal cost of an additional check? Virtually all the costs would be incurred anyway. So maybe $1.10 for some paper, postage, and a few seconds of a clerk's time? The range is $1 to $65 per check depending on how you look at it. And reducing the number of checks only serves to allocate a higher cost to the remaining checks. Without care, you could interpret writing more checks as being cheaper! On a per check basis it would be... I digress...

Ditto for allocation of computer time. Do you charge back by CPU Seconds? By QSO record? By bandwidth consumed? Personnel preoccupied? ARRL buys bandwidth in a bundle of goodies. That bandwidth sits dormant much of the day. There are 24 hours of CPU every day--whether it's keeping the time-of-day or sorting QSO records. Everything is always available for

serving up home pages, LOTW downloads, eMail, etc. Same with hard drive space. Once you put a thousand terabytes on-line, what's the cost of an additional QSO record? You can't even measure a number so small--a few watts per year maybe?

The Marginal Cost is what the BoD cares about. What changes if LOTW goes away? At this point, revenue flow would stop, and all the fixed costs would remain. It isn't going away guys. But expanding LOTW is another issue. That requires additional overhead to be diverted from projects and assigned to LOTW duties. If the available resources are inadequate to cover day-to-day activities, then there is no gas left in the tank for expanding LOTW. That's the situation we appear to be in today. The back room techno-weinie operations are tapped to capacity. More overhead is needed to expand.

One of you wrote:
a DXKeeper user today must remember to periodically
click "upload to LotW" and "SyncLotWQSOs".

While you gentlemen continue your pi(ss)ing contest, please let me ask a question. Does DX Lab support both cabrillo and ADIF? Is there a DX logging program that does? I enjoy participating in some of the contests sponsored by the League (both VHF & DX), but they only allow uploading of logs in cabrillo (fortunately the LOTW creators were smart enough to support both) , and my logging program only supports ADIF, therefore I don't submit logs. I need a SIMPLE way to get the output of my logging software from ADIF to cabrillo. (and NO, I don't want to change logging software)

Ok, so what happens if I convert my ADIF output to Cabrillo and
submit it for the Cw 160 contest.

Again thanks to all who sent info. BV7 has a quick & easy system for
doing the conversion. However, as indicated in the above question
I'm wondering if all of the info wanted by the CQ contest folks will
be provided. I did a couple of conversions, and the state or DX
prefix does for the just finished 160 meter contest not show up in
the converted file.

Thanks Gerry:

I looked at the data on cabrillo formats and all I can say is that
it's a good thing I'm not seriously interested in contesting. My 93
year old mother has a saying: "that's too much sugar for a dime"

I just like to casually participate in various contests, but I'm not
gonna spend 8-10 bucks each to register all the variations of N3FJP's
software just to send in a log for 25-100 contacts. I may go take a
second look at some of the freebie software previously mentioned here
and see if that will work for my casual contest activity. My current
logging program apparently will not export the necessary info to
satisfy the contesting format(or maybe the ADIF to cabrillo
conversion that I'm using won't import the necessary info), so
possibly I can export a file from my contest logger in ADIF and
import the data into my primary electronic log. Beyond that;
screw-em, they just don't get a log from me, and my contest activity
won't be preserved for all posterity. Oh man, I hate it when that happens.

Why not try N1MM. It's very user friendly and free. It's a contesting program and covers pretty well all of them. It exports Cabrillo and ADIF (to import into N3FJP).

I use Logger32 as my total logging program and N1MM http://pages.cthome.net/n1mm/ as my contesting toll. After the contest, I send my Cabrillo file to the contest folks and import my ADIF to Logger32. Then I export ADIF from Logger32 to LoTW. Likely you could send your ADIF directly from N1MM but never have done that as I want my total records kept in L32.

From: JV
Topic: 3575 Message: 3575

I use N1MM Logger. It is free with excellent support. This is a basic contest program although it can be used for causal contacts.
After finishing the CQ 160 CW contest, I went to File, exported the contest to an adif file. This file was imported to my main logging program, DXBase. Also, this file was converted to a tq8 file and submitted to LoTW.
Again, I went to File and exported the contest in a cabrillo file and submitted it to CQ. All of this was done in less than 15 minutes.
I see that there are serval hams that have done the same thing. Notable submittals are that the Alaska and New Zealand stations have their Qs in LoTW, tks guys. BTW, no QSOs with ID, NE or ND. Heard ND with a large pileup Went back later and he was gone.
I also use the DXLab Programs. You can't beat WinWarbler for causal contacts and the logging program is excellent. The DXLab programs are also free with support.

Mike,

If you already paid N3FJP the download price for AC Log, then you
paid him $19. You can get ALL the rest of his software for ALL the
contests he supports for just an additional $20 since he gives you credit
for the amount you have already paid! Where else can you find such a
deal? I counted some 41 specific contest logging programs on his website
so that's one heck of a bargain. That's less than half a buck per contest
logging program!

The full package is called "N3FJP's Software Package." Just drop
Scott an email at

snkdavis@...

and he will tell you how much you need to send him in order to
upgrade to the full package.

You can read the upgrade details here:

<http://www.n3fjp.com/PackageUpgrade.htm>

I am not affiliated with Scott in any way, I just think he offers a
heck of a lot of great (and easy to use) software. Then too, if you
already use AC Log, you will be familiar with all the contest specific
logging programs he offers because they all look and feel the same.

Do you think you can afford to invest twenty bucks so that your
contest activity is preserved for the ages? I hope so. I'd hate for all
that effort to be lost. And, you might find you actually do more
contesting because of it.

Thanks Clark. As a package deal with credit that might be a
worthwhile effort. I'll investigate.

For me, serious contesting is cherry picking what I want/need and
going inside and getting snuggled up to that old woman I sleep
with. Maybe this will help you-all understand my reluctance to put a
buncha funds into this. It may cost me a few bucks more as I think I
bought AC Log when it was 15 bucks.

JV I wish I had found the pile-up on ND. I need to work only ND & RI
to have worked them all on 160. There was a reference to a RI stn on
VE7CC but I never could find him.

Thanks again gents.

Hey Mike

Well, I'll break your heart. I worked either two or three stations from RI. Always wanted to worked WAS 160 CW during the contest. This is as close as I have come. Wish the USA ops would stay out of the DX window, hi hi.

In my submittal to LoTW were the QSOs with XT2C. One contact was on 30 meters in the PSK63 mode. LoTW kicked out the QSO and the error report made a comment to contact LoTW. Anyone know why? Will tackle this problem later in the week.

JV

JV I wish I had found the pile-up on ND. I need to work only ND & RI to have worked them all on 160. There was a reference to a RI stn on VE7CC but I never could find him.

JV unless things have changed I don't believe LOTW will accept that
designator for a mode. I believe it will only accept a designation
of DATA for the digital modes.

The function in TQSL to create an ADIF file for submission includes
PSK63, along with many other digital modes (as well as DATA itself).

Morning Mike
LoTW will accept PSK31. I'll check it out. Maybe all they need to do is
punch a button.
Checked the 160 CW log and found out that I worked four RI stations, dig
dig dig, hi hi. So they are around and you will nail one of em soon.
I hear that the 3905 Century Club uses a frequency around 1865.0 (???).
Take a gander at their web site. May be a good place to check out. I may go
there and work WAS LSB 160 again for their number.
If you are in the area, drop by, door is open. Are you going to Dayton?

Good Morning JV & All:

No, not going to Dayton. I went once back in the late 90's and wasn't impressed enough to want to go back. Since then arthritis in hips has become worse, so I would really have a hard time covering all of that real estate. The only thing I have planned right now is Central States VHF Society get-together in San Antonio in late July, and I question my sanity on that one. July is a helluva time to be in San Antonio. Thank God for air conditioning. Beyond that I may go to Ham Com. We have good friends that live about 15 minutes north of the new location and usually stay with them. I'll go check that frequency on 160, although at this time I can't operate up there. Inverted L is tuned up down in the bottom of the band. I bought a little motor to remotely tune the antenna network, but haven't installed it yet.

I have another shot at ND & RI in Feb during the SSB portion of the CQ test. Maybe then.

One of the highlights of the 160 contest for me was when NT0V from ND found me calling CQ and called me, with 4 minutes left in the contest...:-)

The LotW TQSL program does understand PSK31 and PSK63 modes.
What program are you using to enter your QSO data?

You may just need to update the TQSL configuration data on your machine. Log in to LotW, click on the "Your Account" tab, then "Your Certificates" on the account menu. There's a link titled "Download current TQSL Configuration File". Click on that, then open the resulting file to update TQSL.

Hi Rick
I can send PSK31 to LoTW with out any problems. LoTW will not accept PSK63F that DXBase uses. I think the problem lies in the "F" that DXBase uses. If LoTW had PSK63F added to the preferences, I think the submittal would be OK. Only draw back is one would probable have to send their PSK63F QSOs from DXBase one at a time or in a group.

Here is what I sent Dave, N1NN, who is also working on the problem. There are others who are trying to reach a solution also. I have confidence that this problem will be resolved for any else who may submit PSK63 QSOs.

"Trying to send a PSK63 mode QSO to LoTW and getting nowhere. I am importing the QSO (XT2C) from DXBase2005. In DXBase the submode is PSK63F. In tqsl, preferences, I added DATA, high lighted PSK63 and hit OK. Now I
have DATA->PSK63. When I try to convert to a tq8, I get an error. I'm guessing DXBase2005 with PSK63F is not compatible with tqsl PSK63. What do I need to do to correct this problem? I tried editing the DXBase2005 XT2C.adi file to PSK63 but that didn't work. Still got the error message. I also tried PSK63->DATA. This allowed me to submit the tq8 but the mode showed up in LoTW as DATA instead of PSK63."

I'm attempting to syncronize my Logger32 data file with LOTW. Following the procedure described in the help files seems to work FB. I used the "manual" method to review the changes being made before any update occurs. When it comes to Alaska, something seems to be twisted.

In LOGGER32, the counties for Alaska there are 4 counties listed as:

First Southeastern
Second Northwestern
Third South Central
Fourth Central

But when I look at what is being reported by LOTW, I find the following:

Kenai Peninsula
Anchorage
Matanuska Sisitna
Juneau
Valdez Cordo
Fairbanks North Star

I'm also finding VEs stations reporting a district of "PQ". At first I thought PEI for Prince Edward Island. But PQ?

Any and all clues are appreciated.

Hi Ford....

Alaska has NO counties....it has judicial districts. See:

http://www.qsl.net/kl7j/county.htm

PQ is Province of Quebec

The problem is that Canada Post (the Canadian Post Office)
defines the official abbreviation as QC not PQ.

ADIF also defines the abbreviation for both the Province of Quebec
as and the ARRL/RAC Quebec section as QC.

I don't understand why LotW accepts PQ ...

What's with LoTW?? Nothing since the 5th, and now cannot even access the ARRL LOTW site - everything else on the pc is okay - can access the other ARRL sites, but was wanting to upload more files and get time-out due to 'no path' - also no emails since the 5th? I know it is very possible, but did I miss something??
TIA
Joe W7LPF

Joe
It's OK from here, straight through.
Maybe the address you're using has got corrupted, try starting again.
I've been into the site 2 or 3 times today, without a hiccup.

I uploaded logs and have used it every day for last two weeks. Only sluggish time was right after the ARRL DX 160 CW contest while people were uploading logs. Don't have a clue what would block you.

Thanks all!!

Appreciate the responses - After checking LoTW site
on other pc with no problem - I came back here and
ran CC and defrag program - and switched my Home
Page from Comcast to Yahoo - and so far it seems
to work. The change over of IP's has been a
nightmare [Adelphia being bought out by Time Warner/
Comcast - and neither accepting responsibility for the
failure of a viable e-mail system.]. Oh well, I dusted
off my Earthlink material and have the phone lines
already patched to main pc so, if it don't settle down,
then will go back to Satellite and Dial-up. Know I
will get more done in the shack. Thanks again -
and stay warm - we are heating up here to around
18F highs and close to zero at night.

Just think of LOTW as a stock that just keeps slowly
growing. Sometimes nothing for a week or two and then
a bunch. I'm now nearing 100 on several bands. Just
takes time. Drives you nuts if you check it daily.

3605. LOTW stats by country and versus time

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-02-09 12:33:24 UTC
From: Brian A
Topic: 3605 Message: 3605

http://www.hb9bza.net/lotw/index.html

Gives an unoffical breakdown of LOTW users by country and a plot of the number of users vs time. The growth rate appears to be steady but slow. It does show that there are at least 300 countries now represented in LOTW.

Here is an extract from the link.
A279;K U.S.A : 8213
DL Germany : 397
VE Canada : 392
G England : 389
JA Japan : 297
I Italy : 229
SP Poland : 208
F France : 177
ON Belgium : 170
EA Spain : 167
SM Sweden : 165
UA European-Russia : 149
PY Brazil : 131
PA Netherlands : 130
SV Greece : 108
GM Scotland : 96
LA Norway : 95

Of the 15K users 8600 are from the US and Canada.

It illustrates how poor the acceptance of LOTW is in the rest of the world. Only 297 JA's. Heck there must be a million JA DXers.

3608. Response rate for old logs

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-02-09 18:20:44 UTC
From: Bill Hanrahan
Topic: 3608 Message: 3608

I'm a new LOTW user and only recently returned to HF after a 12 year absence. Under former calls and at other QTHs, I had obtained basic DXCC (mixed) and had 49 states confirmed toward my WAS. Over the years, I had lost my old paper QSLs but somehow had retained a number of logbooks spanning 1979-1985. I've since linked my existing DXCC on LOTW but thought that uploading transcribed QSOs from old logbooks was worth seeing what QSLs I could dig up from the past. Anyway, the other day, I finished uploading the last of about 2,700 QSOs (and I relaize that isn't that many but some standards) but was surprised to find that this only translated to 8 confirmed QSLs (a return rate of about .29%!)

I understand that as LOTW hopefully is used by more old timers, this may change somewhat, but I'm wondering if this is a typical experience for old logs? (I should probably be happy with the 8 that I have!)

I uploaded logs for 1977- 1985 with about 27,000 QSOs. They have
resulted in about 180 "confirmations." That's roughly in line with
your response rate (less that 1% and not worthwhile if I were to do
it again).

Joe,

Uploading 27,000 QSOs must have been excruciating. (By the time I finished uploading about 2,700 QSOs from 1979-1985, I was almost happy that I couldn't find my logs from 1985-1994 or so...) It definitely tells me not to check LoTW on a daily basis!

3613. Response for old logs

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-02-10 15:20:26 UTC
From: FireBrick
Topic: 3613 Message: 3613

I uploaded (after transcribing from hard to read paper to computer) many of the old logs rescued for a deceased qsl manager.
(they haven't produced a multitude of LoTW qsls, but I bet they surprised the recipients)
Obviously, the older the qso, the less chance that it would have been computerized and uploaded.

I still have never received a LoTW qsl from my Novice days. (alas, would have been nice to get even one, lol)

But..I did it so if anything happened to those old paper logs, they would be safe.

DXLabs, does have a very swift, system to transcribe old logs.
I would take my laptop & logs when pressed into emergency baby sitting.
Could usually do 2K log entries before the eyes started to cross.

Digital mode qsos are far more likely to result in LoTW qsls due to the software available for those mode.

(Hint: transcribing is a good way to wait for that DXpedition station that can't be heard in your area yet). :-)))

Comfort the afflicted, and afflict the comfortable.

John,

Yes it is possible and easy.

Start the application at the LOTW submission form on the web page.
They ask you if you are also going to have cards and how many.
Complete the web form. Then make out the standard paper form and check
the box that says LOTW. It is right under the endorsements box. LOTW
will tell you the fee to submit. It turns out that the combined
paper/LOTW submissions are charged at the LOTW rate.

Works great.

Hi guys,

You want doing something futile - I opened up
my one file drawer and checked: I entered by
hand well over 26K regular and contest QSO
during my W7LPF/DU2 ops [79-81], when - it
was fun being one of the few that operated from
there on CW during that time frame. Anyway,
for all that work - I have 127 confirmations via
LOTW. I believe a big reason of the
sparsity of the return is due to the LARGE amount
of confirmed QSL's I have in boxes here. Same,
or even lower return is evident from my operations
from the other places.
73,
Joe W7LPF

Bill / Joe

If you would like to hear from the DX end, here it is. I uploaded about 17,000 QSOs for the period 1990-1998, mostly contest logs which were already on the computer and a few thousand which were transcribed by hand. Still have over 15,000 QSOs from this period to transcribe from handwritten logs.This resulted in about 850 QSL's - that's roughly 5%.

I was off the air since 1998 and got back on in September 2006, from which time I have made and uploaded about 1250 QSOs and had a return of 172 QSLs - a rate close to 14% !

Seeing your return rate (1%), maybe I will focus on the 1990-1998 range for now - have a large number of 17 & 12M QSOs in there. I do have a few thousand for the period 1985-1990 but maybe when/if I finish the rest :)

Success!

I've got over 30,000 QSOs in the log. You would think landing a WAZ award would be a cake walk. As it turns out, a 'hybrid' application with CQ did the trick. In my case, only 4 paper QSL cards were required (zone 2, 29, 33, 34). All the rest (36 zones) were LOTW confirmations.

The CQ rules include a list of the prefixes that qualify for each zone. Going to LOTW and searching the log for the prefix needed to land a specific zone was all I did. Call up the specific QSO record, and the nitty-gritty details were all there. The time, date, mode, frequency, and zone information was all there. I used a PDF of each screen, prepared a 40 page document (one for each zone). For those zones that I did not have LOTW confirmation, I scanned an actual QSL card from 'the box.' The scanning process would not have been needed but I figured it would facilitate the checker by having exactly 40 pages (one confirm per page). I sent in the original QSLs with the application, per CQ instructions.

I mailed my application on Wednesday. This morning, I received eMail notification that an award letter has been issued to me. I send this letter into CQ and my WAZ award arrives back a few weeks later.

What is important here is that the actual details needed to get LOTW to do this does not seem to be that big a deal. In fact, the ARRL is screwing themselves out of some fees. I didn't need to apply a specific credit to a QSO to land the zone for WAZ purposes. I would be happy to apply credits to the QSOs used, but the screens do not lend themselves to applying credits in this manner. The HTML version of a LOTW QSL is all that was needed to secure zone credit with CQ.

Nifty!

Could I ask for some clarification on your approach? ☐ the LOTW only served to select the appropriately QSL'ed QSOs and then you still had to submit the original paper cards for the WAZ award? If my interpretation of what you said is correct - why did you submit a paper report of the LOTW transactions?

VE7AXU (John)

****

Some clarification... Sure! I submit a paper report because that's what the CQ rules require. They have log checkers in the field just like the ARRL. You get your Qs verified by a checker, and then get a letter stating that you qualify for the award. That letter is sent by you to CQ to petition for the actual certificate. In my case, I had 36 zones confirmed using LOTW. No doubt, I may have had all of them in my QSL box (a two foot thick pile of cards). But I only had to dig out 4 cards for the 4 zones I couldn't find in LOTW.

Here is what I did..

First, go to CQ Awards area and find the cross reference table between zones and prefixes. It is here someplace...

http://www.cq-amateur-radio.com/wazrules.html

Click on "WAZ Zone/Country List"

I would print that baby out for quick reference.

Then, log into your LOTW pages.

Click on "Your QSOs" tab.

Here you see the search utility that allows you to search using any one of a number of methods. The clear ticket to joy is to use the "Call sign worked:" field. Take any zone off the CQ zone listing an you will find a number of valid prefixes listed for that zone. Start typing the first prefix, followed by the " * ", which is a 'wildcard' for anything that follows. So for example Hawaii, type in KH6* and hit "submit" button. LOTW will return a laundry list of all the QSLs you have for that prefix. Pick any one of the QSOs for the band/mode of interest. Click on the 'Details' button for that QSO. What you now see on your screen is a QSL card, ala LOTW. Verify that it was indeed a QSO with the CQ Zone of interest. Unfortunately, some DX are unaware of CQ Zones and left the field blank. So you need to verify that the zone is the one you need.

All the necessary information is listed. Date, time, mode, call, and the date the QSL was actually matched in the system. I used the PDF maker called Adobe Acrobat 5.0. Right click anywhere on that page, press print, send to the acrobat distiller and give it a file name. I combined the PDFs and printed it out. That's how I did it. But capturing that page is all I needed to provide to secure credit for that band/mode/zone. You may be able to print it directly from your browser window.

Repeat the process 40 times, once for each zone, and you have yourself a set of source documents suitable for WAZ credit. Fill out the form, pay the fee, attach the printed sheets as proof, and mail it to CQ. DONE!

There are a few zones that split a prefix. And a few prefixes that are in more than one zone. This proves to be a problem when the DX didn't enter the CQ Zone for their QTH. With care, and some luck, you can do as I did and land the majority of Zones. For the few zones missing on LOTW I dug out actual QSL cards and mailed them in with the application--A so-called "Hybrid" application.

Good luck...

John (VE7AXU)

****

I see no reason why it wouldn't work. One sticky issue is that search utility does not provide for a counties field search. So you would have to do a search using your local log and then go look for the QSO in LOTW, which would be a nuisance hassle. But then, the paper work on counties is nothing but hassle--so you get to pick your poison so-to-speak.

Hi,
Anyone else noticed that their QSL counts are screwed up ?

Over the weekend I was at 1205 'confirmed', then, with the addition of 3 more confirmations it has crept up to 1206.

I thought something was up last week but put it down to me not reading the figures correctly.

I have emailed 'help' and know that the e-mail has been read - but as yet no response.

From: Brian Alsop
Topic: 3628 Message: 3629

Graham,

I used to think that too. Saw it many times. The LOTW QSL count is
the number of non-duplicate QSO's.

It turns out that some guys upload QSO's previously sent to LOTW + their
new QSO's. The old duplicates get replaced in the database. However,
it shows up in the LOTW "new QSL's" edit as if it were new. Hard to
say this clearly....

This replace function can be handy if one messed up something in logging
the original QSO. Also it permits or adding things like grid or zone
which were omitted at first go.

I agree... Perhaps my expectations were more 'wishful thinking' anyway. Why? An article in QST is like preaching to the choir. The ARRL membership is aware of the service and either chooses to participate or not--all for a miriad of reasons of their own. Promotion needs to be directed at a target audience (e.g. DX).

A rifle shot to the targe audience would be an article in Swedish for publication in the Swedish Ham Radio journals. A rifle shot would be an article in Swahili for publication in Swahililand. Ditto for Arabic, Hindi, and 82 other languages and dielects. How does one do this? There is no doubt in my mind that 20-50 languages may be represented on this reflector. How do we motivate those who are capable of translating (or writing from scratch) a piece that describes the benefits of LOTW? How do we motivate those that have the language skills to utilize the tools available to help promote LOTW to the organizations around the world?

Help Wanted:
Applicants must possess a working knowledge of English and any other language. Knowledge of LOTW a real plus. Wage commensorate with experience and the coins in my left pants pocket...

I see that there is a direct link for Spanish on the home page, and other documents in other languages can be found here:

http://www.arrl.org/lotw/language-help.html

Croatian, Dutch, English, French, German, Russian, Slovenian, and Spanish are represented. That's a start for certain. Introducing these to the local hams is an effort that needs to happen.

3636. Re: QST Article?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-02-22 03:21:52 UTC
From: Ron Novak
Topic: 3631 Message: 3636

On January 8, 2007 I wrote to Joel Harrison, W5ZN - President, David Sumner, K1ZZ - Chief Executive Officer and Henry R. Leggette, WD4Q - Delta Division Director. I asked several questions about LOTW including, what the commitment level of the ARRL board is to LOTW. Specifically, I suggested a regular QST column highlighting statistics and recent awards (such as 6 band DXCC) and the automatic uploading of contest logs and/or bonus points for doing so along with other comments and suggestions.

None of my questions or suggestions were responded to. The replies I received were from Joel Harrison, and Henry Legette and both stated:

"It appears that an article will be in March 2007 QST on LOTW. It should be going to press very soon. Again, thanks for your input!"

Some article. Nothing but a half page of marketing targeted at the wrong audience. If an ARRL member is not already using LOTW there was nothing in the article to change their mind. So many words saying so little. Nothing about targeting non ARRL members. Business as usual.

Well, The March article answered my questions. They don't give a crap about what members think, want or suggest. LOTW is on the bottom of their priority list.

I'm very dissapointed.

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-02-22 21:36:06 UTC
From: Dave Bernstein
Topic: 3637 Message: 3639

I Googled the worldwide amateur population. The best reference I could find is a table from a 2002 report entitled "Revolutionary Ideas for Radio Regulation" by Douglas A. Galbi, then a Senior Economist with the FCC, which is available via

http://www.galbithink.org/rirr.pdf

Appendix C of this report provides total population and "amateurs per thousand" statistics for 164 countries. This appendix is available via

http://www.galbithink.org/appC.htm

Naturally, I extracted this data into an Excel spreadsheet, removed irrelevant columns involving income, and added a column showing the amateur population for each country. This spreadsheet is available via

http://www.ambersoft.com/Amateur_Radio/Hams.xls

The spreadsheet shows a total world population of 5.8 billion, and a total amateur population of 1.7 million -- an average of .3 amateurs per thousand people. Remember, this is data from 2002.

Slovenia had the highest density of amateurs at 3.2 per thousand people. The US had the most amateurs at 680 thousand -- 2.4 for every thousand people.

What does this mean for LotW?

Assuming no significant change in the world's amateur population since 2002, 15K users is 9 LotW users for every 1000 hams worldwide. However, a perfectly executed LotW would not attract all of the world's 1.7 million hams; only a portion of these hams exchange QSL cards, and only a portion of those are seeking QSL cards in pursuit of awards, and would thus rather save time and money than send/receive a physical card.

The more relevant metric is the total number of amateurs pursuing awards that require evidence of confirmation. If LotW was accepted by all such award programs, and if every award program participant used LotW, then its adoption would be 100%.

So while we know the numerator is 15K users, the denominator we need to assess LotW penetration remains elusive.

"Its like reaching for the stars by climbing a tree; you can make progress for a while, but you'll never get there" (Carl Sagan, paraphrased)

****

Dave, and others...

I agree that the number of licenses is almost irrelevant. It's the number of active amateurs that is germaine to the discussion. And by 'active' I mean that they operate their radios in a LOTW meaningful way. Actively working 2M during the morning commute is not LOTW meaningful. A number of people who consider themselves "active" may only be busy with EM Comms, building QRP radios, maintaining a repeater, and socializing in a club. How many actually work QSOs and maintain a log is very illusive. And of those that keep a log, how many maintain a log using a computer?

The ARRL has about 149,000 members as per the 2005 annual report. Many of these are not active 'operators' and many active ops are not members (shame on them). But it does provide some basis for the number of people that care enough to fork over $32/year (or whatever a ARRL membership now costs). A good number of these are DX.

One good measure would be to look at the super-check-partial database available for most contest logging softwares. My guess is that those who participate in DXCC are well represented in the master database. If you chase DX, then chasing during a DX contest is like shooting fish in a barrel. And if they have turned in a log at some point, a log with at least some Qs, or worked a few Qs to get into somebody else's log, they will be in that database.

Another (perhaps even better) way may be to examine the QRZ database to see the number of searches for a given callsign. I'm an active ham and have thousands of lookups. When you look at a known inactive ham, the number may

only be a handful--and those are due to bad typing. Any ham who is actively working LOTW meaningful Qs is going to have more than a handful of lookups.

I wonder if there are statistics for these databases by prefix? I would love to see the LOTW membership by prefix matched up to the super-check-partial list. That would provide some direction as to holes in the marketing to date...

Topic: 3637 Message: 3641

Actual percentages of QSOs confirmed recently gives a good indication also. Someone recently had a fairly high percentage of LotW QSLs for a RTTY contest. A few weeks ago in the ARRL 160CW contest, I have 260 QSLs for 926 QSOs or slightly over 28%. Of these, there were a little over 40 DX QSOs, the rest W and VE. All taken together it seems that a little over 1/4 of the ones that I worked are members and uploaded to LotW. The previous comment about each of us members just getting one additional ham to enroll, and if the one that enrolled had the same interests as the one who enrolled him/her, then we may see a 50% return of QSLs for QSOs on 160 meters. I don't think you could extrapolate that to other bands without similar supporting data on those bands. It may be interesting to see what the percentages of QSLs/QSOs is for other participants in contests where the number of QSOs is high.

By the way, we have the HB9BZA LotW known user list up to 14,794 as of 22 Feb 2007, so we are getting close to knowing exactly who is enrolled (and who is an easy QSL).

I doubt it would happen, but if the operators of BS7 or another group were to upload the logs for a big operation, I think that we would see a large world-wide influx of new LotW members, just for that QSL alone. If one were to have a plot to induce something such as this, it could be a major expedition for a new country, with the operation planned so that the only way DXCC honor role members could obtain that QSL before the cut-off for the year's honor roll listings would be to get that QSL through LotW. Could you imagine the screams on that one.

r> WOW, lets see, 15 k users, probably at least 3000k hams exist,

I wouldn't be that optimistic, lets see the number of QSO the most successfull DXpeditions make, its about 100k QSO, so I'd say the number of 'active' hams in the world is something close to 30-40 thousand. Only. I wouldn't consider the rest of ragchewers and VHF handheld owners as hams seeked by LoTW.

On the other hand, 15k LoTW users make 13% return rate for me, which means 115k users would make my return rate close to 100%.

3646. [ARRL-LOTW] LoTW reaches 15K Users Today

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-02-23 15:16:25 UTC
From: Ford Peterson
Topic: 3637 Message: 3646

Folks,

We could figure out exactly who is and who is not participating in LOTW. But it would take some database scrubbing. Art-RX9TX's post got me to thinking. Of my 30K Qs, my QSL rate is 19.9%. But a large percentage of these are contest Qs. Lord knows KC1XX is in my log a few dozen times and every one of those is a QSL. So you cannot extrapolate any meaningful data from the simple approach. Deciphering and parsing the numbers would be very informative.

I just tried to figure out from my log how many are US and how many are DX, but the ADIF file is a bit awkward to work with. I do not see a way to get a comma delimited report, so it is going to take somebody with some database skills (not here I'm afraid) to pull this apart. Here are my thoughts on the subject. Hopefully, there is somebody monitoring that has the ambition and the skill to make it happen. Let's see if this notion takes legs...

A database report should be compiled, with the rows containing the ARRL DX Entity list of prefixes.

Several large logs from LOTW participants can be submitted and read. Hopefully, a cross section of users (contesters, Dxers, QRPers, County Hunters, etc.) would provide good details.

The super-check-partial database could also be read.

Investigate whether QRZ records could be incorporated as well--include only those that have some low threshhold of database inquiries.

If the DXCC entities were 'rows' of the report

Column one could contain the number of unique calls identified from all valid sources -- logs, database info, etc. Including only those that are known to be active.

Column two could contain the number of unique calls reporting results to LOTW. This would be extracted from the accumulation of LOTW QSL information off the web from several or even many LOTW users.

Further analysis could bifurcate the data based on the QSL received date, and/or the QSO date. This would provide some trending information.

Whatdoesitallmean?

Suppose you see a 6 page report that shows the following:
(not valid data, for discussion only)

PREFIX UNIQUE USERS SATURATE
G 8500 865 10.1%
JT1 9 0 0.0%
K 35200 8500 24.1%
...
...
SM 650 59 9.1%
VK9 12 0 0.0%
ZL 360 22 6.1%
Total 124000 15000 12.1%

This is a statistically significant report. Where does one focus the marketing effort? Clearly, any effort in JT1 and VK9 is going to have a BIG impact in the "joy" factor for all LOTW users. It also would provide Dxers with a 'by entity' active population for each prefix. The "Users" column could also be parsed to show trending information. E.g. QSO dates <2000 2001 2002... 2007. The by-entity approach also provides some meaningful analysis of the marketing department's success.

My hope is that these thoughts will inspire somebody to pick up the ball and run with it. I think the data would be a worthwhile article, which I would be more than willing to author if provided the data.

If you go to the LoTW homepage, and select the 'Home' tab from the choices
and scroll down to see the first 'News & Notes'.

The bottom 'Note' is dated Dec. 31, 1969.

Somehow, I think that's a typo.

Don't think anyone was even using computers, much less LoTW back in 1969.

Point is...someone looking for that info may miss it due to it being out of
the proper chronological order.

The most expensive component always breaks first.

Yeah, Fire...

Funny you should mention 1969 because during my research for my RTTY presentation, I remember reading the original 4004 uProc chip was designed/shipped for hand held calculators that year. It was several years past that when the visionaries started producing the Altair and other products! I only remember this tid-bit because my presentation needs to bridge the transition from mechanical machines to modern technology.

Ford,

Re: Some of the things you are looking at.

One way to find the number of US vs. VE vs. DX is the following. Log on LotW, go to "Your QSOs" and click the Download Report. Make sure you ask for the long report (Detailed) and put a start date like 1969.. After you down load the report. You will need an editor that allows for searching for a string and counting the occurrences. There will be two strings you would look for

1. DXCC:3>291
2. DXCC:1>1

You will search for those two strings and the find the number of occurrences for each. The first one is 291, the country code for the US and the other is "1", the country code for Canada. Everything else is DX, so:

Number of DX = total number of QSLs minus the number of US QSLs and minus the number of VE QSLs.

One problem with this is that this file does all QSLs not just unique QSLs, so this will produce ratios that are not really correct. I could rather easily right some code to parse the file by not only country code, but user also, with counts for each. That type data could give you a breakdown of what you really want, but there is an easier way.

Robert, HB9BZA has done some statistics on were the LotW users are. You can access that data at: http://www.hb9bza.net/lotw/ . I think Robert's listings are very informative. He has listed, not only the counts per country, but in another listing he has the actual callsigns for each country.

When you look at Certificates active and Users registered, it can be misleading in that a User is the account. Many users have multiple callsigns. In addition, active certificates do not represents the total number calls that are on LotW because, for example myself, I did not renew certificates for old callsigns that I have already uploaded all QSOs for. In my case that was six callsigns.

3652. RE: [ARRL-LOTW] LoTW reaches 15K Users Today

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-02-23 21:19:01 UTC
From: Ford Peterson
Topic: 3637 Message: 3652

Hi,

good starting point for statistics:

http://www.hb9bza.net/lotw/

Andy, DF4WC

****

Andy,

I agree. An excellent resource. But what is missing is the 'population' information to determine the effectiveness of promotion.

The marketing guys call it "penetration." Once you have everybody participating, you have 100% penetration. When I see that there are no participants from VK9M, I'm disappointed until I understand that there may only be 4 or 5 callsigns that have ever been in VK9M. Likewise Peter I, and 3Y0X, where there is only 1 call.

By comparing other information and doing a merge-purge of the data, the likely candidates for marketing come to light. For example, if there is a country with thousands of active calls, and nobody participating, it is obvious that some effort needs to be expended to get the word out, and these efforts would pay big dividends to LOTW users.

as of Dec. 31st, 2006 there were

75,200 amateurs with
80,500 call signs

in DL

these are official numbers by the Bundesnetzagentur
(by the way, this is a plus of 700 after 4 years
decreasing)

406 registered call signs in LOTW, 0.5%

Andy,

I've always admired the German's technical abilities.

0.5% only. What is the reason?

Surely it is not technical ability.
The ARRL sure needs to know why LOTW isn't being accepted.

Brian, ask you ARRL rep is the League sent anyone to Friedrickhaven (probably murdered the spelling) with a laptop to set up a booth and promote/issue certificates for LoTW.

Probably the largest ham gathering in Europe.

Can you say 'Marketing'???

Wonder if they will have a rep at SeaNet?

I did some rough calculation.

There are about 3,000,000 hams in the world (unknown as to active and/or DXers).

World wide: 3,000,000 LoTW: 14,500= .005%
USA: 670,000 LoTW: 8300= .012%
Canada: 45,000 LoTW: 397= .009%
Japan: 1,300,000 LoTW 298= .0002%

From: Phil Cooper
Topic: 3637 Message: 3659

Bill and the group.....

Yes, it would be great to see the ARRL team in FHFN with the ability to get folk on to the LoTW program!
I can't see that it would take too much effort, BUT.... I suspect that not many folk would take a copy of their licence to this event.
Therefore, if they WERE to do this, maybe it should be WELL PUBLICISED?

They handle DXCC applications there, and I am sure it wouldn't take much to note down a list of calls and the fact that they have seen the necessary paperwork, and taken email addresses from them.
Once back home, they could then process these calls and send them the password via email.

Anything to increase the take-up of LoTW should be welcomed!

And how about they do the same at the RSGB HF Convention in October! I have a feeling they did this a year or two back, but can't be sure.

Publicize your attendence at all large events.
Bring a wireless laptop.
Issue certificates on the spot.

Most countries do have lists of licensed amatuers.
Proof of identity would be all that's required in 'MOST' cases.

This isn't rocket science.

Cattle Prods solve most of life's little problems.

Hi all,
Last week I re-formated the hard drive and this weekend after the NAQP RTTY contest I attempted to send in my log to LOTW. Well seems I have have to register all over agian, well that is the impression I get. Seems the only way to get LOTW up and running again on the computer is to submit another cert of request. I did this and now am being asked again for verification of my license. Is there another way around this so I dont have to mail in a copy of my license again. All this just started after re-formating the HD. I was under the impression all the "offical" certification was up loaded and at LOTW.
Thanks for your input
Mike

Mike,

Drop a note to: lotw-help@... and explain your problem. They may be
able to help.

Also you can try going to "Your Account" on the LoTW main User page and the
"Your Certificates". You can download them from there but I'm not sure if
that will do the trick. I've not tried it myself.

From: Nenad Stevanovic
Topic: 3637 Message: 3666

Gerry,

That is exactly the reson for slow LoTW penetration.
In simple terms it is addressing the wrong market segment.

a. 15K that are IN, do not make any good use of it, other than
setting new records of 30, 40 or 50 years record between
the QSO and its confirmation.
b. 3 Million or so that are OUT (I still think only 0.5 million)
do not have the idea how to use it and for what.

Resolution: Redefinition of service to meet the needs of both.

Nenad VE3EXY ....

Subject: Re: [ARRL-LOTW] Re: LoTW reaches 15K Users Today

I did some rough calculation.

There are about 3,000,000 hams in the world (unknown as to active and/or
DXers).

World wide: 3,000,000 LoTW: 14,500= .005%
USA: 670,000 LoTW: 8300= .012%
Canada: 45,000 LoTW: 397= .009%
Japan: 1,300,000 LoTW 298= .0002%

Andy,

I've always admired the German's technical abilities.

0.5% only. What is the reason?

Surely it is not technical ability.
The ARRL sure needs to know why LOTW isn't being accepted.

well, marketing is one thing, but as you see in the
actual edition of QST...

I stated this before, but apparently it is very hard
to understand for Anglo-Saxon people, that the average
mid-european will not send copies of documents through
the world.
This is a fact which has to be considered!
We will not fax our credit card number, we will even
avoid using it in internet etc..

again - we will not send official documents!!!
Not local and less than ever to the U.S.
Sit back and think about it - just a cultural thing.

so my recommendation is to install local registries
as for QSL checking.

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-02-25 20:11:21 UTC
From: Carl
Topic: 3662 Message: 3668

Here ya go Mike:
Pasted from the LoTW site.
My computer crashed. Can I have a new certificate?

Did you back-up your certificates using the Save command in TQSLCert? If you do not perform this step and later lose your
certificate (due to a hard-drive crash or system reinstall, for example), your certificate will be unrecoverable. Click on the
certificate in the certificate list to select it, then choose the Certificate menu's Save command. Save the certificate file onto
a floppy disk or other off-line medium. You will also be able to use this saved certificate file to load your certificates onto
another computer later.

If you did not save your certificates and keys, contact us at lotw-help@... and we will get you going again with a new
certificate.

Good luck & 73,

Carl K8AV

Andy,

This is interesting to me. I have seen discussions of this in the past so I
know there is some truth to what you say. In fact, I fired off an email to
my ARRL director, who is also chair of the membership services committee
that oversees LOTW. He is very interested in this.

As a US ham, I have no clue what documents you are referring to. What is it
that they ask of DX to sign up? Director Bellows asked me and I have no
clue. Any specific information would be very helpful.

The documentation required is as follows.

1. A Copy of the AR Licence.

and probably more 'sensitive'.......

2. A Copy of something which carries photographic identification - ie:
Passport or Drivers Licence.

Now you perhaps understand the reluctance of many Amateurs to sign up
to LoTW.

These have to be sent through the post rather than electronically
transferred.

From <https://p1k.arrl.org/lotw/docreq>:

"Every non-USA operator requesting an initial, unsigned certificate
for Logbook of the World must send a copy of his/her Amateur Radio
operating authorization in addition to a copy of one other
government-issued document indicating his/her identity. Such an
additional document might be a driver's license, or the first page of
a passport. (Identity documents will be destroyed after certificates
are successfully issued.)"

The rationale for requiring such documentation is that other
governments do not provide an on-line means for verifying license
information as the FCC does with ULS.

My opinion of this requirement from day one:
It will limit the participation of LOTW from non-US/Canada.

I wouldn't send such information to anyone overseas.

I was involved in beta testing of LOTW. My opinion then was unwanted QRM.
Their ears don't seem to be any better now.

There has to be another way to assure the "purity " of LOTW entrants..

That won't work. If you didn't back up your private key, it cannot be
recovered.

That's something every LotW user should do: use TQSLcert to
"Certificate/Save" the key pair, and store the backup offline. You need
to do this every time you renew your cerficate as well.

3676. Non-US documentation requirement

Yahoo group: ARRL-LOTW (2003 — 2007)

From: Ford Peterson
Topic: 3676 Message: 3676

I've been corresponding with my director regarding the onerous picture ID documentation requirements imposed on non-US amateurs. The perceived need is based on not having a resource like the FCC's on-line license info. He has promised to evaluate the requirement to determine if alternative approaches are appropriate.

Thanks to all the DX who commented. Feel free to express your concerns right here on this reflector, or directly to me, and I'll forward them as appropriate. Stay tuned (pun intended) for more info on the subject.

You know, I don't understand why they ask for a picture ID?
Is there someone at Newington who has met and remembers the face of non-USA hams?
If indeed someone is going to bootleg an identity, a picture ID would be no problem.
Heck, some of the 10 year olds at the local bars have multiple picture ID's.
lol

I suggest that the League should engage the national radio amateur organization in each country to certify that country's hams.

Engaging people outside the ARRL organization just opens up another layer of problems. I agree with the suggestion of having a LoTW signup booth at the major worldwide Hamfests. Another help would be to have a LoTW forum or "training class" on the Hamfest program too. There's nothing much better than an enthusiastic presentation to stir up interest and participation, no matter what the subject matter.

But maybe, just maybe, the eQSL system has implemented a better option. Basically anyone can self-register and participate in the system. You create your own user name and password when you login the first time. You can then upload, download, and use many of the facilities in the system. It's ONLY when you decide to participate in an award program that you are asked to provide credentials to verify who you are.

In this context, peer pressure can raise participation levels. If enough fellows work a rare one and the rare one is not authenticated, email encouragements to do so will certainly follow quickly.

If LoTW allowed "two-tiered" authentication, there might be wider acceptance and use of the system. Of course this would require a major overhaul of the LoTW security system and I'm sure we all know how likely that will be!

Graham...

So, does that fireproof suit have a stainless steel zipper??? :-)

I use both systems and both have their advantages and disadvantages. Regarding the pestering email messages... you can turn that delivery service off in your profile. My preference is to receive them. But I do have Outlook setup to "sort" all my incoming messages into separate mailboxes (folders). That way I can read what I want, when I want. I have 26 incoming mailboxes for my "Ham Radio Stuff".

What was the deciding factor for you to dump eQSL? I am interested because I wrote an article about the two systems and was surprised to see such strong opinions regarding one or the other systems. Even to the point that many hams list "NO EQSL" or "NO LOTW" on their QRZ.COM profiles. Oh, the article starts on page 15 in the June 2006 Grayline Newsletter here: http://www.tcdxa.org/newsletter.html Be aware the newsletters are pretty large PDF files (3 to 4-Mb each) because they have a large number of high quality photos.

No. But there are people working there who certainly are familiar
with the appearance of license documents, passports, and maybe even
photo IDs for a great number of countries. This is after all the same
group that has been checking DXpedition documentation for thirty,
forty years now. Over that time you'd expect them to have built up
some collective knowledge on the subject.

>If indeed someone is going to bootleg an identity, a picture ID would be no
>problem.

Especially not a problem for a national. If DJ6XYZ wanted to
impersonate DJ7XYZ, yes, he'd probably get away with it.

OTOH, it might be a bit harder if you or I wanted to go out and fake
a passport or driver's license from Myanmar or Brunei or ...

>Heck, some of the 10 year olds at the local bars have multiple picture ID's.

So, if perfection is unattainable, why bother doing anything at all?

The question is: what might be some reasonable alternatives short of
doing nothing?

Hello Prasad,

I remember your message about the unfortunate episode with eQSL.

I had a similar experience recently. I was testing the system to investigate a potential software problem. I setup an account like K0RC-TEST-ONLY as the user and gave it a regular password. I then uploaded a couple hundred QSO's to validate the issue I had seen. Sure enough, the next day there were a half dozen of those "TEST" cards that had been retrieved during my 24-hour test period. I bulk erased the test log and then individually erased the 6 bogus "retrieved" cards.

This experience is the same as if I found an incoming eQSL from BS7AF. I'm going to click on that QSO to look at it just out of curiosity. But as soon as I perform that action, the system locks it in as "retrieved". I suppose this is no different than if that BS7AF card showed up in my postal mailbox. I would certainly open the envelop and look at it.

So it gets back to the ethics of the person receiving the card and the action they take about using it. This adds credibility to the old saying "Locks and keys are for honest people".

Subject: Re: [ARRL-LOTW] Non-US documentation requirement

I don't upload my entire log anymore on e-qsl. This was prompted by an incident that happened to me once. I made one erroneous upload of a log with 500-odd QSOs belonging to another amateur into my own account. And then, I was amazed to see the flood of reply eQSLs claiming the QSO, as if they had made it with me.

3686. let's not 'dumb down' loTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-02-26 21:19:38 UTC
From: FireBrick
Topic: 3686 Message: 3686

Don't take my statements that I mean to make LoTW valueless.
I RESPECT the integrity of LoTW.
The reason other qsl system do not meet this standard is they know they wouldn't gain any participation either..

Many many countries have online callsbooks/license-data.
Let's use these where possible. It seems the various callbook publications can obtain the data.

Let's ACTIVELY provide hams in other countries a easy, person to person way of submitting the data required to join LoTW.

If the DXCC allows reputable, high integrity, people to serve as qsl checkers, extending their authority to 'vouch' for membership in LoTW is a natural extension.

There are conventions, Hamfests, conferences going on.
Take advantage of these events to 'sign up' members.

All it really takes is a wireless laptop.
I have both, give me the plane tickets and I volunteer.
(ok, I admit to not being reputable or of high integrity)

Everytime I read how the qsl data entry is such a tiresome, error prone, expensive part of DXCC, I look at the totals of LoTW submitees...

Does anyone else see the disconnect here?

I admit to being dumber than dirt, if I'm missing some important part, I'm sure someone is going to tell me.

Let's not 'Dumb down LoTW' 'Let's PROMOTE LoTW'.

I have 'pse join LoTW' in all my digital, cw buffers.

I'm a retired firefighter and still have my gear hanging on the wall.
Feel free to flame away.

If you can read this I can hit my brakes and sue you.

Your making a good point Mike.
But that is not exactly what is going on.
LoTW is not asking for proof that you traveled to the rock to operate.
They are just asking to show a PHOTOCOPY or your license and ID card.

That's nowhere near the level of proof required to enteroperate in N. Korea
and the like.

A scriptkidde/hacker could fake the documents needed to be mailed in less
time than you will need to read this email.
That's unfortunate, inevitable, and shameful.

Integrity is paramount, but we must find a way that it is not a hurdle to
acceptance.

I was not aware of various ethnic aversion to 'mailing' personal documents.
I should have realized that. So let's find a 'alternative' that is
acceptable and of high standard.

I found it very long winded and a waste of PC time - who wants 700
identical cards from different stations. Even moreso when I started
handling the QSL's for a big UK contest station [who wasn't really
interested]
The awards, as far as I am concerned, mean nothing - even less when
half the 'confirmed' qso's are not, because the other end is not
Authenticated.

I think it was just a money making excercise trying to say -
effectively to ARRL - look how wonderful we are. But the ONLY awards
you can get are eQSL awards. At least there are/were/might be plans
afoot to incorporate more meaningful awards [*] into LoTW [we all pray
for IOTA, if not Counties]

[*] No slur intended her - as I consider the Prime Opertaing
Achievement to be DXCC - Original & Best.

OK so I am waiting for quite a few LoTW confirmations [to make life
easy] but otherwise I am just missing 2 'hard cards'

There was a plug in RadCom some while ago about how wonderful it
was.....I think the author was inundated with people asking why -

if it is so wondeful - the majority of Ops - certainly on Digimodes, where it is easy to do, say NO eQSL. I have yet to see a No-LoTW, and many of us DigiOps add the comment that LoTW is used.

Maybe I'm biased and getting grumpy in my old age. <smile>

I think most are think of a "government-issued document indicating his/her identity" as being synonymous with a photo ID like a photocard drivers license or a passport, even though nothing in the LoTW documentation says that it has to be a picture ID.

Obviously there are other acceptable ID documents, like your paper counterpart driving license, that people might feel less reluctant to send via the post.

This is one of those things that is going to be different from country to country.

Gerry, Another good point.

But it would be a good place to start.
In fact, I would suspect the 'national orginization' would be receptive.

Thanks Bob! I looked all around the LotW site but couldn't find
anything about 3 year renewal, but i'm not always the most
observant. HI HI.

Sometime last year, they lengthend the certificates lifespan to year.
No announcement, maybe they thought the 'system' was catching on.

3697. RE: [ARRL-LOTW] Certificate renewal every year???

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-02-27 14:08:52 UTC
From: Stephen Emlyn-Jones
Topic: 3693 Message: 3697

As a European I did not have a particular issue with supplying my details to the ARRL in the form of photocopies of my licence & driving licence.

I was quite impressed with the speed with which the ARRL responded.

Not only that but I had occasion to change the inception date of the certificate & this was also dealt with promptly.

I see that my certificate expires in 2010 when it will have run for some 3 years.

As I understand it the renewal process it straightforward & can also be processed online.

There is a detailed FAQ at https://p1k.arrl.org/lotw/default which I think should deal with many of the questions recently raised in this thread.

For "Authenticity Guaranteed" with eQSL it is necessary to submit a copy of one's licence, although a scanned copy to a checkpoint in my own country was acceptable.

It does seem to me that perhaps the ARRL should consider easing their requirements for DX stations by allowing scanned copies or as has been suggested allowing National Societies to act as a checkpoint.

When I was HF Awards Manager for the RSGB some 20 years ago the vast majority of award issuers were willing to accept me a checkpoint for their certificates but not of course for DXCC.

It will be interesting to see what feedback comes from the reference to the ARRL Director mentioned in a previous email.

Actually if someone attempted to obtain an LoTW certificate for a portable operation from North Korea, or from any of the other entities that requires documentation for accreditation of the operation, I believe the ARRL does ask for all of that accreditation documentation at the certificate issuance stage because the certificate is tied to DXCC country.

The copy of the license document and a government issued identification document is what suffices for the less rare DXCC entities.

>A scriptkidde/hacker could fake the documents needed to be mailed in less
>time than you will need to read this email.

I'll agree that in the extreme all the current authentication scheme really demonstrates is access to samples of the required documents.

I have to disagree that the hacker kid down the street would have ready access to such documents for countries other than his own. Not unless the kid is already set up to be multi-national forger.

>That's unfortunate, inevitable, and shameful.

Why? There is a continuum of authentication in DXCC, always has been. LoTW is no different.

>Integrity is paramount, but we must find a way that it is not a hurdle to
>acceptance.

Well, in the LoTW design report/specification, authentication by a copy of license document and id was rated by the ARRL's consultants as being more vulnerable than authentication using a license authority database and mailing a postcard.

However, the copy of license document and id option is universal and so it or something like it was needed so as to not exclude stations from countries where the license authority database is not publicly accessible.

The reason the license authority database option is only employed for the US (and Canada?) has to do with the scarcity of programmer

resources needed to implement it on case-by-case basis for other countries.

No So. When I operated from China and got a LoTW certificate for that operation, I had to apply for a new certificate on my existing account plus send a copy of my Chinese licence and a copy of my passport visa.

Yeah, that caught me up when I renewed and put a QSO end date one year later. My certificate was still good but I couldn't submit any contacts so I had to renew again recently (moral: don't use an end date unless there is a good reason to).

That was not my understanding.
As I heard of others, who went to non usa locations and were not required to furnish proof.
Maybe it has to do with the country visited.

Yes, there are some countries that the DXCC desk doesn't require proof of licence. Most of these are the common ones and those that have reciprocal licensing ,CEPT or IARP permits. Clearly DXCC doesn't need proof if I operate in the USA.

From: http://www.arrl.org/awards/dxcc/rules.html#siii
2. The following points should be of particular interest to those seeking accreditation for a DX operation:

a) The vast majority of operations are accredited routinely without a requirement for the submission of authenticating documentation. However, all such documents should be retained by the operator in the unlikely event of a protest.

Now that's what I call "creative thinking!"

The first annual International LoTW DX Challenge should be a mixed mode contest sponsored by the ARRL and run for 48 hours. Use the same rules as the existing ARRL DX contests but add a LoTW multiplier to the mix. If both stations are registered on LoTW and upload their logs, each gets a "ten point bonus" for that QSO. If only one side of the QSO is a LoTW participant, then only that station gets a "five point bonus".

This idea could be a strong LoTW marketing strategy with the least amount of ARRL monetary investment.

Good job Jeff! You're 59 in MN! QSL?

I too really like the idea. So I spent some gray matter on how to make it happen. Unfortunately, it will never happen. At least not for ARRL contests. There are a number of reasons for this being a non-starter.

1) The ARRL contests are log checked by pre-defined database analysis tools that are very expensive to alter.
2) Tradition is king. Changing the rules to allow an alteration of the point assignments would make the new contests no longer comparable to the old.
3) The two systems are quite separate--contest log checking and LOTW. Data from LOTW would have to be merged with contest logs.

This is not to say the notion cannot grow legs. But an intermediate step may prove necessary.

That step is to require all contest logs be submitted to LOTW for credit. The log checking algorythms would then be re-written using 100% LOTW data. As it currently sits, even hand written contest logs are still accepted and must be typed in by hand. In practice, only statistically significant logs are fully entered now. You submit a contest log with a few Qs, they enter enough data to get you into the results but are not a participant in the log checking process. Unfortunately, all of this would involve some expense--possibly large expense on the part of ARRL.

Although I really like the idea, don't hold your breath...

Subject: Re: [ARRL-LOTW] Big Contest Weekend

Now that's what I call "creative thinking!"

The first annual International LoTW DX Challenge should be a mixed mode contest sponsored by the ARRL and run for 48 hours. Use the same rules as the existing ARRL DX contests but add a LoTW multiplier to the mix. If both stations are registered on LoTW and upload their logs, each gets a "ten point bonus" for that QSO. If only one side of the QSO is a LoTW participant, then only that station gets a "five point bonus".

This idea could be a strong LoTW marketing strategy with the least amount of ARRL monetary investment.

Good job Jeff! You're 59 in MN! QSL?

Good time to work other LOTW users this weekend. My cluster shows which stations are LOTW users so I can try and get them in the log and then do an upload next week. I wonder if an LOTW contest would ever happen?

Even if I'm not participating in a particular contest I try and work LOTW participating stations as a show of support.

As to an ARRL sponsered contest using LOTW in some way, "Not in our lifetime" was an off the record quote from an ARRL staffer after I kept calling and writing about just such an event. Many reasons were given, perhaps the subject of a future post.

What's to stop an Non-ARRL sponsered contest? Anything to show the interest in such an event. I see two possibilities:

1) A contest where total score is reported and simply posted somewhere. No log checking (unless someone has access to such software) just the basic honor system. X points per qso with each LOTW participating station counting as a multiplier. (or any number of other scoring methods). Just something simple that can be posted somewhere.

2) Similar to #1 but run in conjunction with a major contest. For example I can take my log from the contest this weekend, match it against a list of known LOTW users and apply a different scoring model. Sort of a contest within a contest. We could start simple and just see how many LOTW stations you can work in a given contest.

Ford,

I'm not holding my breath either, but remember the DXCC and LoTW Divisions have now been combined under one leader. It's probably a given that economies and efficiencies are expected to flow from this union. So there's a speck of "hope"...

But your point #2 is well taken. The International DX LoTW Challenge would need to be a NEW event, leaving the entrenched, traditional contests to stand on their own.

Regarding point #3, I look at it from a different angle. True, the contest checking software would need a new "scoring" routine added. And another stand alone program would need to do a "range check" within the LoTW records to verify the contest log was actually uploaded. I don't think the two systems would need to be "merged" to make the idea work.

But then, this is idle speculation on my part... easy enough for me to sit here and concoct ideas... and let someone else do the work... well... isn't that what a Manager does???... I wuz a Manager... !

I passsed the extra test saturday, and went with getting a new call sign.
right now I am current on lotw and with my cert. What steps will I need to take
When I get my new call? Also, since I am at the same qth will the qso's under my current
call count or show up under my new call, or do I have to start over again ?
Thanks in advance,
Don

Use your present cert to apply for a cert for the new callsign
When you get it....you can 'link' the new to the old.
Your credits, dxcc totals etc will not be connected as if it was always one
call.

From: Vilnis
Topic: 3719 Message: 3719

Hello to all ,

Using LOGPlus! since 1994?. So far so good.
DOS but perfect working under Win XP . Now, after
first steps with LotW getting in problems how
to know which DXCC entity is confirmed via LotW.
Allready received my DXCC mixed and RTTY via LotW
only. To continue sucesfully with LotW and my
DXCC probably is needed to make a dramatic shifting
for me - change a logsoftware.
Please Your suggestions, know some - DX4WIN, LOGic,
Logger32. Allready make a tray all three but
can not agree with no one. After LOGPlus!
nice special "QSLing department" all looks less
nice for me. Any suggestions.

Topic: 3719 Message: 3720

Take a look at DXLab's DXKeeper, Vilnis. It

- tracks LotW upload status for each QSO (not uploaded, uploaded but not yet accepted, accepted)

- assembles a batch of not-yet-uploaded QSOs to be uploaded to LotW (one mouse click)

- uploads a batch of QSOs to LotW (one mouse click launches the ADIF export, TQSL invocation, and file uploading sequence)

- tracks each QSO's confirmation and verification via LotW separately from confirmation and verification via QSL card

- updates each QSO's confirmation via LotW via a single mouse click (downloads the ADIF file from LotW, and updates the LotW confirmation status of each newly-confirmed QSO in your log)

- generates submission paperwork for ARRL DXCC and Challenge awards based on confirmed QSOs for unverified entities, entity-bands, and entity-modes.

DXKeeper can also directly print QSL cards and labels.

Its free, and available via www.dxlabsuite.com .

73,

Dave, V4/AA6YQ

Topic: 3721 Message: 3722

I think what your asking is...
If you previously submitted and it was accepted for credit.
Say BS7H on 160 cw...

and now the op upload those BS7H QSOS to LoTW.
It will NOT be listed as a qso that could be used.
There will be a line that says it's indeed in LoTW
But the DXCC box will not be submitable.

Now if he submits a qso that matches one you also submitted to LoTW but did
not have a card for as it was 160 digital mode
That will show up as 'available to be applied for credit.

Basically, LoTW knows what you have submitted and is in your account as per
entity, band, and mode.
Anything that doesn't fall inside those limits will be so noted.

And everyone should be aware, that all your stateside callsigns are
linkable.
Credits I received for WN9VOL are counted in the totals for my present call,
W9OL.

Hi Vilnis,

My preference after checking out several loggers is Logger 32. I mainly chase DX and work on DX awards. I use Logger 32 for general logging and like the digital mode/CW integration. I use N1MM for serious contesting. Both are priced right (free) and are well supported.

From: Dave Bernstein
Topic: 3726 Message: 3726

I casually operated for 9 days from the island of Nevis, using 100 watts and a palm tree dipole on 80m through 15m. 92% of my QSOs were CW, 6% RTTY, 1% PSK, and 1% Phone.

I uploaded QSOs to LotW several times each day.

During my stay, I worked 77 DXCC entities; 25 (32%) have been confirmed via LotW.

Of my 1218 QSOs, 182 (15%) have been confirmed via LotW. Here's the breakdown by DXCC entity for those entities with which I made at least 10 QSOs:

DXCC QSOs LotW
K 612 118 (19%)
DL 88 5 (6%)
OL 59 4 (7%)
SP 47 8 (17%)
F 37 4 (11%)
I 32 1 (3%)

3727. LOTW plaque

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-03-09 13:31:54 UTC
From: Brian A
Topic: 3727 Message: 3727

I'm considering offering a plaque for the first station to confirm 2000 band countries via LOTW only -- same criterion as ARRL Challenge award. (160-6m exclusing of 60M, no deleted entities)

I should be possible to achieve. Several people are now over 1500. Perhaps those chasing this would help convince non-LOTW stations submit their logs to LOTW.

The difficulty I'm having is determining that such a claim is indeed legit.

If I were the ARRL it would be easy-- provided that one didn't link their DXCC records to LOTW. Even if the station had linked their DXCC records, presumably the ARRL could use the "download" file of LOTW QSL's as proof. Just run it through an up to date logging program and confirm the total.

Since the downloaded file is ADIF, it too could be manually changed and sending it to me wouldn't be sufficient.

Any suggestions on how to assure that the true winner gets it?

Right now this is just an idea. Until I can figure out the above, it is on hold.

It would be neat if I could just be the sponsor the plaque and the ARRL administers the one-time issuance-- just like contest plaques.

If someone claims to have achieved this, have them tell you their LotW web site username and password. Then you can download their QSL file, load it into a logging application, and verify their claim.

They can then change their web site password.

From: Bill
Topic: 3727 Message: 3729

Here is an idea on confirmation.

Have the one claiming the goal download UltraVNC and load the server on his computer for a one time shot. This is rather easy to do. UltraVNC then has a web interface, where you can log on with a password and view the display of the person's computer in real-time. Then, along with an open telephone connection, instruct him to download the lotwreport.adi file and attach it to an email addressed to you. You can even have him, while you watch, type a unique message that you have made up on the spot. You can watch him then send that email and view the outgoing mail box until it is sent. You have him open the "SENT" messages folder and you note the time the message was sent and you are done. Log off and the one applying can then uninstall the VNC server.

Other than going to the location, which could be anywhere in the world, this is the only way I can think of right now to insure you are not spoofed.

Hi Dave,

Interesting suggestion. The one problem:

I could change his password (I think) to something else and he can never get back in without involving ARRL again. I'm a bit fuzzy on this. It has been at least 3 years since I set up my LOTW account.

I find it interesting that the ARRL currently claims to have no way of segregating LOTW and paper DXCC credits once the account is linked. It would seem that they surely can create a download file for anybody and tally up the results.

Everything could be even easier.

One way or another LoTW is the ARRL's domain. Anything related to LoTW should be coordinated with ARRL. First, they have to approve the whole idea. Then, a plaque applicant should send you his ADIF file with the totals of 2000 and up. Then there are several options:
- you send this file to ARRL for verification
- you ask ARRL for their copy of this file for your own verification (obviously they have administrative rights on the site and can pick it up themselves).

And finally the easiest of all: you send ARRL a simple request: "AB0CDE claims to get the LoTW Challenge total of 2000. Please kindly confirm, if so".
That's it.

>>>You could, but there's no incentive for you to do so, and the user has recourse with the ARRL if you inadvertently screw up.

I find it interesting that the ARRL currently claims to have no way of segregating LOTW and paper DXCC credits once the account is linked. It would seem that they surely can create a download file for anybody and tally up the results.

>>>Wasn't it you who challenged my rationale for having DXKeeper separately track card, LotW, and eQSL confirmations for each logged QSO? Doing so allows DXKeeper to generate precisely the information you seek.

>>>I'm still waiting for the ARRL to make it possible for a logging application to download a user's DXCC credits (yes, one could parse the current HTML report but that would be fragile in the face of a format change). As has been asserted here many times, ARRL's investment in LotW is extremely low, so even trivial enhancements take forever.

That's a fine theory, but in practice it would take a couple of
decades.

I have no problem with the ARRL and am a Life Member. But I have found that with any large organization, in general, that if you wait for things to happen or get approval from, then one could die first. LoTW may be owned by the ARRL, but the QSOs and QSLs you have earned are yours to download or do anything you want with the file. Personally I wouldn't get ARRL involved with your idea on the plaque.

Gents,

Sometimes it's tough to be a lawyer, though I am the one de facto, businesswise. Therefore sometimes a brief legal analisys of a certain idea serves as a well refreshing shower.

The Web page www.arrl.org/lotw starts with " ARRL's Logbook of the World (LoTW) system is a repository...", etc. Well, it's the ARRL program... Then, we are talking about the DXCC Challenge program which is also the ARRL one, you like it or not. So, we are done. If ARRL is left apart, we officially cannot talk about neither LoTW, nor DXCC Challenge. Moreover, as long as the whole DXCC program is maintained by the ARRL with their own criteria for band/countries and DX activities' validations, even the ADIF file is their own domain at a certain extent and can barely be used for other but ARRL DXCC purposes...
OK, we can say, the plaque is issued for achievent of a certain result under the criteria equal to the DXCC Challenge program, but is this really the target desired? ...

Back to ARRL. First, nobody asked for their opinion yet. What if they come up with an support of that? But still, they can simply say, why should we support this idea if we can issue our own Challenge plaque with the 2000 sticker?... (Assuming, taking some money for that...).

Well, the deeper we go, the tougher it is.

Not easy.

73,
Vladimir VE3IAE/EU1SA

Sometimes it's nice to be a de-facto lawyer. Believe me, there are severa simple ways to force ARRL to come

OK, there is a private project on sponsoring of the plaque.

Hello Dave, Gerry , all.

Yea, looks nice from first shot, this DXKeepr....
Logger 32 is ok but not very best for logging/qsling.
Dredging now..... ;-)

Thnx for help.

It would be nice if LOTW would be a little more plainer about how it operates.
For instance......Do I have to send them money to get my awards started?
I have a few dx confirmed now........but they R not in any order....why don't they show how many more dx station I have to get before I get to 100?
I have read the read me file.....but nothing in there except how to setup LOTW.
Now that I am uploading and have 1126 Q's and about 187 confirmed...I have no idea of what countries I need or states.
73's
Robert KQ4PK

Congradulations! on the new dx that U recieved.

LoTW is still down at 10:57 PM EDT.

My guess it that they had a glitch with the Daylight Savings Time being 3 weeks earlier this year and most of the software needs some form of manual intervention to get it right.

To make things more interesting MicroSlop quit supporting the "Millennium Edition" last July 11th.
I was forced to improvise by setting the Windows time zone from Eastern(-5 hrs.) to Atlantic (-4Hrs).
I left the Automatic DST Notification ON, as a reminder to redo things in 3 weeks.

Also my logging software required some messaging (I use both Logic 7 and 8) !!!
LOGic will automatically correct for the EST/DST Changeover so I had to defeat it and manually
set the offset to -4 hours.

I strongly that those of you using other logging software check them out in detail.
The last thing we need is have is a bunch of LoTW submissions falling outside the time window.

I would doubt it had anything to do with the time change. If I were the LOTW administrators, I would run it on GMT time, which I think they do.

I had a chuckle on the news today. They were interviewing a city official about the Orange County CA fire. He said "thankfully, we have an hour extra to keep the helicopters up because of

daylight savings time." They have to stop operations at sundown.

Doubtful. More likely the machine or server crashed. Nobody there to
reboot on weekends. It has happened many times before on weekends.

They run their clocks on universal time. Most hams should also. I
don't understand the adversion to doing so. It totally avoids the
problems associated with DST AND logs the correct time for use in QSLing.

In my version of WIN-XP you get UT by selecting Greenwich Standard Time
in the date/time setup.
Earlier versions one could use GMT Casablanca.

3747. DXCC backlog

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-03-13 11:45:00 UTC
From: Brian Alsop
Topic: 3747 Message: 3747

LOTW applications apparently go in the same queue as paper QSL's.

While one may get instant gratification by receiving a LOTW QSL quickly, getting it officially added to your totals still takes a long time.

Right now there is a backlog (according to the ARRL webpage) of 800 to be processed.
They say they are shipping out confirmations to applications received week of Jan 12.

It seems reasonable LOTW applications could be processed much faster than paper ones It really would be just a snapshot in time of what your AWARDS listing shows.

Why not a two tiered system. One for LOTW and another for paper? The LOTW route would be very fast.
Wouldn't that create more interest in LOTW?

73 DE Brian/K3KO

I'm old and my memory was NEVER good.
But....
It seems that when online LoTW submission started, they said that Online would receive priority.
I absolutely remember that my first HyBrid submission. (combo LoTW and Hardcard) was processed very fast.
But all my subsequent (2 submissions a year) hybrid submissions have reverted to the usual 6 week */- duration.

I have not submitted a LoTW only via online, all have been of the hybrid variety.

3749. 3DA0 DXpedition

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-03-13 15:00:34 UTC
From: ei7cc
Topic: 3749 Message: 3749

Many of you may have seen the following news in the weekly DX newssheets:-

A DXpedition to Swaziland from 16 to 25 March is being organized to celebrate the 75th Jubilee of the Irish Radio Transmitters Society.
The group will also take part in the CQ WPX SSB Contest (24-25 March). Operation will be on all bands with particular attention given to the WARC bands, digital modes and the LF bands. It is also hoped to have some activity on EME, 2m and 6m. Participating operators are Paul/EI2CA (3DA0PM), Peter/EI7CC (3DA0PB), Aidan/EI8CE (3DA0AM), David/EI4DJ/GI4FUM (3DA0DJ), Rory/EI4DJB (3DA0RH), Brendan/EI3GV (3DA0GV) and Pete/GI4VIV (3DA0GI). QSL for all via EI7CC, direct or bureau.
The web pages for the expedition can be found at http://www.irts.ie/cgi/afri75.cgi; on-line logs will be updated on a daily basis.

An additional bit of information for LoTW users is that QSOs with 3DA0GI and 3DA0PB will be uploaded to LoTW promptly after the DXpedition.

Hope to work lots of you!!

Hi Bob,
Thanks for the reply.
I have done that,but it says so many R pending, what do I have to do see what they R?
Or what I am thinking, is that they R not confirmed yet,maybe I am wrong.
There is not enough info on LOTW.
DO I HAVE TO SEND THEM MONEY FOR THEM TO SHOW WHAT I HAVE EARNED?
Robt

Pending means it has been confirmed on LOTW, but you have not yet submitted it to ARRL for the award. You only need to pay when you actually submit the contacts.

The answer to your question Bob is NO, you don't have to send them any money to show your results. You would do that when you wanted to make your results "official" by obtaining an award or certificate.

Select the "Awards" tab and you can view your progress in the DXCC and WAS programs.

There is a short article in the just arrived April QST regarding LOTW on page 13. IT outlines some changes to hardware and software. Maybe someone was listening.

Hope it's not an April fool joke.

Congrats to all!

LOTW just passed 8 million matches for 16 million QSL's.

The current QSL rate now stands at 12.93%, and should
pass 13 percent within a couple of weeks.

Long term, I think the rate will go to the upper teens. The QSL rate
was only about 10 percent a year ago.

Here are the high points

1 LOTW support is how the full time responsibility of KA1RWY, Kathy Allison. KE3Z, Jon Bloom will be the LOTW software developer.

2 ARRL never anticipated that LOTW would require so much software support.

3 ARRL will be upgrading the LOTW severer and data storage. This should happen in the next 90 days.

4 In the second half of the year a new and improved process for obtaining a certificate will be in place.

5 Other LOTW software tweaks will be an ongoing process.

I think that was the meat of it. No mention of new awards being supported

Julio, W4HY

The HB9 web page indicated LOTW participants in 301 current entities.

How many people are getting close to the magic 300 mark?

Currently have 273 current entities in mixed mode.

What totals have you guys got above this?

Date: 2007-03-23 23:55:43 UTC
From: Ford Peterson
Topic: 3772 Message: 3772

After many years of slugging it out in pile-ups with the rest of you guys, today is a very good day. Although it is a paper QSL, #100 on 80M arrived in today's mail--my last QSL neede for 5BDXCC. 7X0RY in Algeria on 80M was a good catch last November.

I confirmed a DXCC on the other bands using LOTW and a few stray QSLs cards in a hybrid application late last year. 80M on LOTW was simply stuck at 78 for months on end. There are 135 countries in the log on 80M but just couldn't seem to land the last few--paper, LOTW, or otherwise. A few weeks ago, I broke down and mailed paper QSLs to a good sampling of the missing 80M Qs. I greased the skids with green stamps. It worked! The last two weeks brought in the remaining 22 QSLs the old fashioned way.

I've had a DXCC on 20M for years--did it the old fashioned way long ago. LOTW helped me by confirming no less than 386 band entities since that original paper application. The remaining few were manual.

My 5BDXCC hybrid application may go in this weekend--if I can find the time.

Thanks to all for the Qs and to LOTW for saving me a boat-load of dough!

After I read Art's message I realized I had misled the group. My 162 countries are also co-mingled with my original DXCC records but LOTW allowed me to get my original countries counted. I had lost my earlier records and certificate but when I uploaded new logs on LOTW I was able to link my old records with my current list.

If they are using the contest time to do some maintenance on the
server, then that is a good idea. I fear it is crashed, and no
one will get to it until 9AM EDT on Monday.

IMHO, I think the ARRL should raise the rates on the LOTW credits
in order to budget in a "geek with a pager" who can fix things on
the weekend. 99% uptime is all I am asking for. If this outage
goes beyond the close of the contest at 2359z, it will be a huge
embarassement to LOTW.

Sorry, I don't understand the urgency for having 24/7 availability for a record keeping system. There is no "real time" requirement for LoTW access as an operational tool. Yes, it's inconvenient if you planned to do some uploading or exploring your latest QSLs (that you wait for months to years to get by mail/bureau) but it's not a catastrophe. It will be back up, as been said, worst case Monday. Maybe just a patient wait would be in order.

Personally, if the LoTW managers acquire extra buck by whatever means, I'd rather see it go to developing more award modules and/or promoting the system to the majority of the DX world that doesn't use the system now.

3778. Standard Operating Procedures (was: LOTW Pre Contest Error)

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-03-24 17:48:20 UTC
From: Robert Chudek
Topic: 3778 Message: 3778

I don't want this message to come across as critical regarding the LoTW system, but Gerry is on the right track. I managed a large multi-division production network (Target, Mervyn's, Macy's) that WAS deadline critical... and LoTW is NOT deadline critical. The manager of this system should implement some standard operating procedures that would benefit both the users and the system.

Maintenance is necessary on any system. So a preplanned, scheduled, downtime should be posted for everyone to know in advance. In my case, all network users knew our system would be offline starting 8:00 PM Wednesday evenings, every week. The system would be back online by 6:00 AM the following morning.

My engineering team would preplan their activities for that block of time. It was up to the users to do their part of preplanning their production activities as well. I didn't arbitrarily pick that time, it was negotiated between the engineering staff and the production staff to determine what time would have minimal impact.

I do not know the level of Enterprise Network expertise within ARRL. But part of the systems knowledge must go beyond the technical aspects of running a system. I have not seen a standardized maintenance schedule posted for LoTW. Maybe I have overlooked it?

Having a system available at a "Five 9's" level (99.999% uptime) is a VERY expensive proposition. Again, IMO, LoTW does not need to be a Five 9's system. Banking, hospitals, airlines, etc. need to be Five 9 systems.

See http://www.forsythe.com/Forsythe/infraservices/servers/server_five9s.jsp for an overview.

The "geek with a pager" is another safety measure I employed for the unexpected failure that might halt production activity. At the minimum, in the LoTW environment, this should trigger a webpage acknowledging LoTW is currently offline. A similar page should post during the preplanned maintenance window.

The ARRL has already exposed their naivety regarding operational issues of a 24/7 online database system. "We never anticipated the high level of software support that we find we must provide for LoTW." Quote from Harold Kramer - WJ1B, ARRL CEO in QST April 2007, p13.

The designers were technically astute, but there appears there was no "expectations setting" to preset the reality of operating a system like LoTW. Or maybe there was appropriate expectation setting but it fell on deaf ears?

In any case, the April QST issue reveals some good changes that have and are going to be put into place. And with a dedicated developer putting his attention to the issues, LoTW should get better. But it will take time... especially since the development "team" is one person!

Ivan G4BGW

****

Ivan, and others...

I wonder if there is a user base that is using LOTW in ways that were unforeseen. The error message has been appearing quite a bit lately. And seeing it is a busy contest weekend, it really makes me wonder...

Is there a software application out there that requires being 'logged into' LOTW for the entire weekend? I don't think anybody anticipated thousands of users being logged in for 48 hours simultaneously.

My personal usuage is to upload, check stats, browse for a few minutes, and then get-out-of-Dodge. I think this would characterize the bulk of user's activities. It makes me wonder if there are now users that do what used to be a CD Rom lookup with their local logging software. For example, my local logbook looks at the call I've typed into the callsign field, and it does a lookup for me--opens a window with all previous QSOs listed. It's a very handy tool at times. And it performs the lookup on my computer. Is there some application that recently started using the LOTW data to accomplish the same goal? If so, the database server is on its knees attempting to serve up all those inconsequential queries. If this is true, then this is not a LOTW issue, it's a local logbook software author issue. We should find out what application is doing this and get them to re-think their procedures. If we don't figure this out, it will remain broken I'm afraid.

Actually, as a software developer - if some external program is doing something that is crashing MY program - it is NOT my job to get them to change how they do things - it is MY job to change MY program to prevent what they are doing from crashing me - either by preventing them from doing what they are trying to do (then they HAVE to change their program), or changing my program to do what they are trying to do without crashing

Golly Gee, I'm sure glad I decided to look at the Yahoo group - I've
been trying on/off all day to get in - and kept getting the "too many
users" bit. So I guess I can stop trying now.

My thanks to the group...

Robert and others,

A couple of pertinent points raised here I think:

Bye it's very nature, it IS a 24/7 online database even though most individuals do not use it as such - someone somewhere will always be wanting to either upload their latest QSOs or check for hits, so it does get constant use and this will become more so as additional users sign up (I tend to try and access when you guys are still in bed hi!).

At present, we do not know the validity of the 'too many users (task limit)' error message - it may well have crashed for other reasons or indeed, been taken down for maintenance (either preplanned or an emergency), BUT some indication on the LoTW home page would have made us all aware and so stopped all this surmising and hot air then we could get on with the main purpose of our hobby.

Finally, I'm not a programmer. but I would have thought it would be quit possible to devise something which would 'bump' folks off after say an hour (or maybe less) if indeed they are staying connected all weekend - which I find hard to believe.

Time for bed at this end - Ivan G4BGW

>Snip>
> The "geek with a pager" is another safety measure I employed for the unexpected failure that might halt production activity. At the minimum, in the LoTW environment, this should trigger a webpage acknowledging LoTW is currently offline. A similar page should post during the preplanned maintenance window.
>
> The ARRL has already exposed their naivety regarding operational issues of a 24/7 online database system. "We never anticipated the high level of software support that we find we must provide for LoTW." Quote from Harold Kramer - WJ1B, ARRL CEO in QST April 2007, p13.

3784. LoTW up and working

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-03-25 03:10:05 UTC
From: R Johnson
Topic: 3784 Message: 3784

I logged in about 02:00Z 3/25/07 and found Lotw working.

Found 9 QSL's waiting which I imported into my log.

Looks like VE3JY just joined the group and uploaded his logs back to 2000. TNX !!!

Everyone can get the "knots out of their pantyhose" now :-) !!!

Now back to the WPX contest.

Yeah! It is running again.

The reason I was trying to use LOTW during the contest
was to check what WAS states I need for 40 and 80 in order
to target some call areas in the contest.

Generally, I would bet that during a contest like WPX
that LOTW would have low usage. I would also be that
this Sunday night will have be in the top 20 for usage
right after the contest.

Whether we want to admit it or not, LOTW is in direct
competition with eQSL. From my experience, eQSL has
had an incredible uptime rate, I'm guessing in the
area of 99.9% uptime. All I am asking from LOTW is
a two-nine uptime rate (99.0 %).

As we've said before, LOTW's technology is maturing, and
this is turning more and more into a marketing effort.
Having the "users exceeded error" or "LOTW offline" for
days at a time is bad PR.

Thanks to the ARRL for getting LOTW up again.

From: Brian Alsop
Topic: 3787 Message: 3787

It appears that the LOTW program is up after being down earlier this weekend.

However, it appears that it is simply placing all uploaded QSO's into a queue.

That means nobody gets any LOTW QSL's till the files queued files are processed.

It might just as well be down.

This has happened several weekends in the past as well.

Interesting that the ARRL is discovering that database management requires people resources.
In reality, it isn't hardware that keeps the system up and going. It's people. Why does this
have to be continually relearned?

I also don't understand why it can't be restarted/rebooted remotely.

Brian,

My guess is that they put LOTW into queueing mode right after major
contests for a few hours. I understand the need for this, but again,
I wish they would tell us. They should put up a red icon that says
"now queueing - results will not appear immediately. Do NOT re-submit
logs." Something like that. Without a warning, users will keep
submitting logs into it. I hate to admit that I did this when I
was new to LOTW.

Displaying the current depth of the processing Queue on the LotW main page, along with a few explanatory words, would make it easy for LotW users to see what's going on, and judge how long it might take for their newly-uploaded QSOs to be processed.

I uploaded my CQWPX log a couple hours ago (quit early).

I got the "queued for processing" message.

What more do I need? Likely tomorrow, after processing, I'll see the results.

Personally, I don't need real time performance from a record keeping system.

I have made an upload last week's Sunday afternoon. The contacts appeared to reach my log only on Monday late afternoon.
Just uploaded another protion, nothing came up yet, just "queued for processing", too. It looks like, it turns to be normal for LoTW.
I have to admit, it used to be faster in the early days of LoTW, if I am not mistaken.
Anyways. No big deal.

****

I was able to complete an application earlier today--a 5BDXCC app no less.
No worries... I seriously doubt we need an "on-call" tech for the weekends.
Monday is another day. Another work day come to think of it.

Uploaded a file 7hrs before the contest finished, and the 'QSO records
have been entered into the system' number hasn't been updated since
that time (now 1815utc), so we might be queued, but looks like the
door is firmly shut!

Looks like post-contest they have implemented a FINO (First In Never
Out) queue. I wonder when they are going to start processing.

I uploaded my VA QSO Party log into LoTW using N4V.tq8. I notice they
are listed in LoTW with my call, KT4U, in the left hand column. Is this
correct? Seems to me that the QSOs would be listed as N4V. Also notice that
the Qs from N4V.tq8 are mixed up with the Qs from KT4U.tq8 all under KT4U.
If any of you guys worked me in the VQP, check LoTW and let me know if
your QSO is there.

What was the callsign associated with the certificate that you used to
sign the log?
If you signed it with your KT4U certificate, they will show up as QSOs
with that callsign.
The filename you use to upload the log isn't used to figure out the QSO
detail.

If you haven't requested a N4V certificate, you can use TQSLCert
"File/New Certificate Request" and sign it with your KT4U certificate,
avoiding the postcard hassle.

I'm not sure how the ARRL handles temoporary calls, though. You might
want to send an e-mail to lotw-help@... to ask them how to handle
this.

While signing the log did the tQSL program ask you what call-sign and what country to sign the .tq8 file with?... And what was your reply?

Did you request a certificate for N4V or just used the KT4U one?

Subject: [ARRL-LOTW] QSOs

I uploaded my VA QSO Party log into LoTW using N4V.tq8. I notice they are listed in LoTW with my call, KT4U, in the left hand column. Is this correct? Seems to me that the QSOs would be listed as N4V. Also notice that the Qs from N4V.tq8 are mixed up with the Qs from KT4U.tq8 all under KT4U. If any of you guys worked me in the VQP, check LoTW and let me know if your QSO is there.
Comments Please

Hi Rick
I have certificates for KT4U (main) and N4V (special event). tq8 was
signed with N4V. I would think when I click on details, N4V would show up.
Thought I would toss it out here before contacting ARRL.

What was the callsign associated with the certificate that you used to
sign the log?
If you signed it with your KT4U certificate, they will show up as QSOs
with that callsign.
The filename you use to upload the log isn't used to figure out the QSO
detail.

If you haven't requested a N4V certificate, you can use TQSLCert
"File/New Certificate Request" and sign it with your KT4U certificate,
avoiding the postcard hassle.

I'm not sure how the ARRL handles temoporary calls, though. You might
want to send an e-mail to lotw-help@... to ask them how to handle
this.

Oh. I thought these were QSOs for N4V, not KT4U. Apparently I misunderstood and thought you were submitting QSOs for callsign N4V, not KT4U.

(If they *were* for N4V, you signed the log with the certificate for KT4U and should resubmit the log signed with the N4V certificate as these were clearly submitted as KT4U QSOs.)

You got it right. The submittal was for N4V. If the certificate was for N4V, why would it accept being signed by KT4U? I'll straighten it out tomorrow.

LotW accepts the log being signed by the KT4U certificate because the log has no indication what callsign was used to make the QSOs. TQSLCert depends on you to choose a certificate with the right callsign. That's the only way LotW has to figure out what call you used.

Given this message from LotW:

> >2007-03-20 14:24:09 LOTW_QSO: Certificate found for KT4U - UNITED
> >STATES OF AMERICA (291)

... you picked a certificate with KT4U as the callsign.

If you re-sign and re-submit the log with the right certificate, it'll be fine.

From: Robert Chudek - K0RC
Topic: 3811 Message: 3811

The over-the-weekend system upgrade seems to have put LoTW into high gear!

Has anyone else noticed how quickly you can navigate from screen to screen? The log processing queue is being depleted as well. I uploaded my WPX SSB contest log late last night and I had the results posted this morning.

I don't know how much horsepower was added or any of the details of the upgrade, but for it to be noticeable at the user level, it means the system has taken a significant step forward.

My hats off to ARRL and the LoTW team! Thank you!

73 de Bob - KØRC in MN

If you set the award account field (at the bottom of the 'Select QSOs to List'
form) to anything other than '-- None --', there are two extra fields added.
It's been that way for a long time.

Subject: [ARRL-LOTW] QSOs

I uploaded my VA QSO Party log into LoTW using N4V.tq8. I notice they are listed in LoTW with my call, KT4U, in the left hand column. Is this correct? Seems to me that the QSOs would be listed as N4V. Also notice that the Qs from N4V.tq8 are mixed up with the Qs from KT4U.tq8 all under KT4U. If any of you guys worked me in the VQP, check LoTW and let me know if your QSO is there.

That I received my first 6 meter LoTW qsl.
It was only as far as the next county to the West...
but it counts for a new country on 6
and another Challenge credit.

Thank you WD9GJK :-)

Every little qsl counts. lol

I can trace my taglines back 8 generations.

I took a snapshot over the weekend of slightly over
200,000 new QSOs that came in. Here are my stats:

Date Total QSO's Total QSL Records
3/30 125,103,815 8,131,451

4/1 125,310,347 8,148,561

diff 206,532 17,110

So for this time period, the QSL rate for these
new QSO's is 8.28% Obviously, long-term these QSO's
will be matched at a much higher rate. Still, this
8 percent number seems low to me.

I'm thinking this isn't enough data to predict where
the LOTW overall QSL rate is headed. Obviously there
are a lot of factors like RTTY Contest weekends etc.
I thought this weekend was a good choice for a study,
since there is no major contest going on.

I did notice that Friday was a particularly bad day for QSL matches,
and that it got progressively better over the weekend.

****

Tim,

I don't think you can evaluate the data in this manner. Unfortunately,
sampling the data for a single day two days later answers one question:

"How many users that happened to have QSOs on Friday upload the data
immediately?" As you indicated, there are very few. And the question is
completely different than what you were investigating.

You could answer that question by looking at the QSL matches for Friday's
uploads--two years from now. Unfortunately, LOTW database stats do not
permit such a granular query...

Just bear in mind that instant gratification is not indicative of long-term results.
Seriously, nobody expects even a bureau card until at least 3 months after the QSO....

My current rate is about 17% for contacts - many of which are contest QSOs.

I suspect that many hams upload their logs at the end of the month resulting in Saturday and Sunday seeing a lot of uploads to LOTW. I don't know what the typical processing delay is--normally I would see my results immediately after an upload (except for contests) but now it seems to take longer, possibly because of increased usage.

My QSLs are now at a 23% rate, which has been slowly increasing. Most of my QSOs in recent years have been in contests.

I find mine is running the same, just under 25% with the majority being contests. I generally upload mine after submitting my cabrillo file to the contest robot. I normally submit via e-mail and this last time was the first time that I did not get an e-mail response back however, all of my contacts did get uploaded to LOTW. I also feel I have an advantage if I load later at night with the east coast time difference. I normally get very quick responses, within a few minutes anyhow.

That brings the total number of entities in LOTW to at least 302.
Good news indeed.

3857. Kudos to ARRL for Better Communication

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-04-02 17:15:49 UTC
From: timgep
Topic: 3857 Message: 3857

The ARRL LOTW team seems to have taken to heart the
calls here for better communication before LOTW system
shutdowns. They warned about the 1PM EDT Maintenance
Shutdown on the LOTW site earlier, and now have a better screen
when you try to log on.

LoTW Off Line
The ARRL Logbook of the World Server is temporarily shut down for
maintenance, as of 1 PM EDT (1700Z) April 2, 2007.

Service should be restored within a few hours.

Thank you ARRL! That is more like it!

I remember someone saying there was a url command sequence that would
download your entire log from LoTW.

I don't mean to download the LoTW report.

I mean...it will give you an .adi file of all the qsos you UPLOADED to LoTW.

Someone I know managed to trash his computer log and hadn't made backups.

(not me...I'm the most anal backup person in the world)

you can reply offline is you wish w9ol@..., w9ol@...

Please and thank you.

Here's to our wives and lovers. May they never meet.

Second thoughts on this.

If you are desperate you can download 25 at a time by capturing "your
QSO's via cut and paste.
Your QSO's allow you to search on date so that at least partial logs can
be recovered with some work..

I tried this "cut and paste" approach and "pasted" it into
WordPerfect. It shows up as text without all the boxes.
Unfortunately, because the fields are tab delimited after the last
character in a field, the fields don't line up too well.
One has to manually edit them to produce columnar data. The resultant
file could be saved in ASCII.

Some smart programmer could probably post process the raw ASCII pasted
file to put it in useful form.

Once this data exists in column form one can probably import it into
logging programs. Most allow such format or by adding commas at least
comma delimited fields.

Just for curiosity, how much would such a backup service be worth to you
if LOTW provided it? $20, $50, $100 or what? What it could be priced
at and the potential market would determine viability. My guess is
hams are cheap and wouldn't want to pay what it would have to be priced at.

On the other hand, it doesn't strike me as a monumental task for a LOTW
programmer to implement such a capability since "download" already
exists for QSL'd records. Assuming they are already processing your
complete QSO file looking for hits. It would be only require adding an
if test. Modifying the LOTW screens to add such an option would
probably be the bulk of the work.

Sorry, that was the url that I had.
I know it used to work as I helped a few retrieve thier logs after HD crashes.

But it seems not to work.
It just returns an empty .adi file.

I guess something changed.

I even tried it on my log and same result.

That was my last idea for my friend.

back to the drawing board.

Bill

I just tried this on my own call successfully:

<https://www.arrl.org/lotwuser/lotwreport.adi?
login=CALLSIGN&password=PASSWORD&qso_query=1&qso_owncall=CALLSIGN
&qso_detail=yes&qso_qsl=no&qso_qsorxsince=1900-01-01&qso_withown=yes>

Replace each CALLSIGN with your current Call
Replace Password with your current password.

Note: For those of us who have changed calls over the years, (e.g.
K8KWT -> WD8KWT) the "qso_owncall" statement must
be eliminated to get the entire file.

I proposed this functionality to the ARRL LOTW people as an additional
income generator for LOTW.

They said they didn't have the capability, were strapped for resources,
and that it would "never" happen.
I believe they said to write to your SCM to help get more money
allocated for LOTW.

I'd be interested if anybody has managed a coup and found a way.

Brian

Just a few minutes ago I did download my entire log of QSO's that I previously uploaded to LoTW. This is not just the 2600 QSL's this is all 14,000 QSO's.

Make sure to copy & Paste the entire URL to the browser - everthing between < >.

<https://www.arrl.org/lotwuser/lotwreport.adi?
login=CALLSIGN&password=PASSWORD&qso_query=1&qso_owncall=CALLSIGN
&qso_detail=yes&qso_qsl=no&qso_qsorxsince=1900-01-01&qso_withown=yes>

Replace each CALLSIGN with your current Call
Replace Password with your current password.

Note: For those of us who have changed calls over the years, (e.g. K8KWT -> WD8KWT) the "qso_owncall" statement must be eliminated to get the entire file.

Bob,
I tried this. I did subsitute 2007 for 1990 lest we get 130K QSO's
downloaded.

It didn't work.

After a long wait ("waiting for p1k....") LOTW came up with a download
file name window.
Accepted the default.
After that it said it downloaded a 4K file.

The file saved on the PC ended up being 0 bytes long and contained nothing.
I have something over 2.7K QSO's entered into LOTW for 2007.

Good call on subsituting 2007 for 1900, 130,000 QSO's would take a
long time espeially if you use dial up like I do at home. :)

I just got home and have a few direct e-mails telling me that others
got it to work. So I tried it again here at home. I used a W2K PC
at work and a Win XP system here at home and both worked fine.

I did see a result similar to what you describe when I
left "qso_owncall=CALLSIGN" instead of changing it
to "qso_owncall=K8KWT". The result was a 4K empty .adi file.

If you don't remove the "&qso_owncall=Callsign" statement to
get "all" calls in your account you have to enter the call you want.
(e.g. qso_owncall=k3ko).

<https://www.arrl.org/lotwuser/lotwreport.adi?
login=CALLSIGN&password=PASSWORD&qso_query=1&qso_owncall=CALLSIGN
&qso_detail=yes&qso_qsl=no&qso_qsorxsince=1900-01-01&qso_withown=yes>

Hope that it is the same problem you are having Brian.

73 good luck

Bob K8KWT

Try temporarily disabling your firewall or anti-malware software.
Does that allow the query to work?

Bypassing everything: pick the LotW "Your QSOs" menu. Off to the left
of the selection box is a "QSOs Menu". Click on "Download Report".
Blank out the date, click the "Include QSO detail box" then click the
"Download" button. If that doesn't yield a good download file, it may
be time to get in touch with the LotW help folks. It might be your
computer and it might be something else.

From: Stephen Emlyn-Jones
Topic: 3858 Message: 3873

I have just run a query using Rick's interface & am glad to confirm that it downloaded the 700 odd QSOs detail I had previously uploaded almost instantaneously.

I did in fact insert my user name & password prior to running the query although I do not see that this should make any difference.

I left all the other fields unaltered.

From: Brian Alsop
Topic: 3875 Message: 3875

This is like preaching to the choir but here goes.

How much is saved? Here are some rough estimates.

Looked through LOTW QSL's here - 5000 unique calls, 20000 QSL's, 150 new band-mode ones.

Assuming all 5000 uniques were US = $2K savings
Assuming all 150 new band-mode QSL's were DX= $400.
Avoided costs by not QSLing 100K QSO's via bureau @ $5/pound = $8K

Not really sure what the bottom line is. It is some weighted sum of the above numbers.
However, it's quite significant-- perhaps the cost of a new rig.

You got that right Bri!
now here's another twist.

I qsl manage for a number of dx calls, most are not active but still hard to get qso/qsls.

Of those, I've seen many LoTW qsls.
So that means THEY saved money, the bureaus had a slightly less load. and I had a slightly less load.

Which allows us qsl manager to provide the service slightly faster.
One of the recent major operations almost immeadately uploaded their logs to LoTW.
The savings had to run to a very princely sum.

And one more twist.
When an operation annouces that they will upload their logs to LoTW, I (my personal system) send in a donation immeadately. Hopefully my meager donations provide some cushion in operating funds.

We must continue to support dxpeditions, but substituting LoTW qsls for expensive/costly to receive hardcard qsls, would mean slightly more funds available for donations.

Brian,

Your math is correct from bare-bone numbers, but is not
quite realistic.

1. Fow WAS you need 50, not 5000 or so QSL cards.
50 x 0.45 = $25

2. For 5B WAS maybe 5 times that figure. $125

3. 150 band QSOs is pretty much impressive. Most people
have much less newly matched band QSOs they need.
Anyways, 150 x 2.5 = $370.

So from the pragmatic perspective you need cca $500,
not $2000.

I am not sure that any station will be eager to use
rest of 2000+ US matched calls for any award. Instead,
they will send bureau cards, hoping you will go and
claim them from the local QSL bureau (@ 2$ per Lb).

I am still in view that LoTW is right thing to do.
However, it is addressing the market of 15K people
(currently known as direct users). The number of
matched records is still too small to justify further
development.

There is still 500K+ more people all over the planet
that do not take advantage of LoTW. Attracting those
HAMs to make some use of LoTW is the missing link.

Actually, LoTW for the WAS award uses a flat fee structure of $7.00 for each award.

I really don't chase the award to get the plaque or wallpaper.
But...
Just as a personal goal, I've been trying to work/confirm every entity, on all 3 modes, on all HF bands.

I call it the Don Quioti (Impossible Dream) award.

Just doing it to see how many I die with.

But...if I was to send for every one of those qsls...that would probably cover a pair of the newest rigs....

So LoTW has saved me a lot of time and money.

Do illiterate people get the full effect of alphabet soup?

From: Nenad Stevanovic
Topic: 3875 Message: 3883

I have seen very marginal drop in
QSL bureau traffic as the consequence
of 'electronic competition'. People still like
real paper cards as collectable items.

The key differentiator to this trend will be the
contest stations, representing significant source
of QSL traffic (40-50%). Following are the current
assumptions:

a. Contest stations are not interested
in receiving any QSLs at all

b. The only reason they send QSLs is the fear
that DX stations will make them 'blacklisted'
and avoid to work them in any future contest.

c. There are two contest station's QSL patterns:

- Send all cards at once, and never spend any
time checking responses (saves time)

- Wait for bureau request, and respond to
those that in the log (time consuming).

Now the question is:

1. Should they continue with the exisitng status-quo?

2. Should they ransfer all their logs to LoTW, and
stop sending any paper cards at all?

The answer to this trend is in the fact that current
ratio between users/non_users is 15K:500K.

Should this trend continues, option 1. will persist.
Should the ratio become dramatically changed in favour
of LoTW users, option 2 will prevail.

Well Rick/et al - I been trying for 2 days to do it
either via your site Rick or the other one given
on this group and all I get is either - one with no
records or ''unable to download from this site'.
I have tried on yours Rick with putting in the
user name and pw - and leaving it out. either
way - nothing. I once started to do it the
looooong way by 25 at a time, but 'life's to
short' - so best just stop trying, at least until
I get my taxes done [which I have yet to start
on!!]. Have a great day - we went from mild
weather to cold/rain today.
73,
JOE W7LPF
Ex: W7ZQV/KG6 - W7LPF/DU2 - CT1DKG/CR7DKG - HB9IBA
MGR: 4L1DA

BTW - Also tried to narrow things by just downloading for specific
Calls - I.E. W7LPF/DU2 - HB9IBA, ETC, but it sits there for awhile
then defaults to the ''unable to download''.

Ciao!

I think the ARRL should upon accepting dx for DXCC credit add them
to LOTW since they have all the liscening and operating permits info
in hand.

All DXPeds have the right to qsl in whatever way thay wish. Those trips cost big money.
Recently many have started uploading to LoTw approx a year after the operation.

There was a VU Andamans that did upload immeadately. I sent them a donation telling them to use it for their next trip. (got an email thank you reply)

I have begun sending my donations and qsls with a note that the card is not required if they will upload MY qsos to LotW.
Saves them work, saves them expense. Cards are nice, but I can't turn around in my shack now.

It would be a great thing for DXpeds to advertise, almost instant credit without the worry of postal problems.

This brings up an interesting point. My understanding is that some
DXpeditions copyright their logs and/or have agreement with sponsors
that their logs can't be made public or have contents disclosed en mass.

What does one then do with X year old DXpedition logs? Have them
collect dust or be sent to the big bit bucket in the sky?

They are not generating any income.
They have little value unless they are disclosed to researchers.
It makes little sense not to have them sent to LOTW at that point.
(Of course, 10 year old logs from today are probably are still paper and
that is an obstacle)

What is an appropriate value for X?

On the other hand, maybe the paper versions will make it to Antiques
Roadshow in 75 years.

The main point I was trying to make was that since the ARRL has all
the paperwork from the Dxpediton. Why not automatically set them up
for LOTW and if they want to use it then it is available for them.
Getting DX invloved is the main problem.

This may or may not be the thing now BUT I can say that none of my dxpeditons nor any i have worked in the background on have ever had a log copyrighted Please tell us which ones you know have done this ? We do copyright logos names ect . Why copyright logs ? only the qsl managers have the logs. we did sometimes make copies of the logs in case one set got lost getting off one of the islands.

>What does one then do with X year old DXpedition logs? Have them
>collect dust or be sent to the big bit bucket in the sky?

NO except for a few cases i know of logs are kept by someone a qsl manager a team member or someone who might be related to a member who became a SK. i have seen cases where someone would say i am closing logs for this dxpedition But someone would always come forwards and ask for the logs so they could be kept active.In the case of VP8SSI VP8BZL and 3Y0PI when i become a SK my copies of the logs will go to N8UX . Ron Lago AC7DX has copies of our logs as he does all of Jerry and Jonnie's AA6BB/7 and KA6V/7 logs and the ones they were qsl managers for. So 99.% of all the old logs i should think are active somewhere. i have also seen where some logs were sent to the ARRL for safe keeping. i am sure there are cases where logs got trashed along the way by the XYL 's of some SK.

>They are not generating any income.
>They have little value unless they are disclosed to researchers.
>It makes little sense not to have them sent to LOTW at that point.
>(Of course, 10 year old logs from today are probably are still paper and
>that is an obstacle)

That is true they are not generating any income for the group after some period of time. But i still get qsl request and so does AC7DX for some of SSIDXG 's dxpeditons 13 yrs after the trips. I have thought about starting to transfer the logs to computer logging and putting them on lotw BUT we are talking about days and days of work. 58,000 qso's from one call alone. as for the ARRL doing it ? I REALLY do not think they would waste their time converting what logs they do have let alone any new ones they are too busy dumbing down amateur radio to do this. (but that is MHO) No I do not think any logs at ARRL or sent to ARRL will get put into LOTW. they will not spend the money or man power to do it. What you will see it some of the dxpeditions uploading their logs 3 to 5 yrs after the dxpedition as

they need to all the money they can out of the logs to offset the costs .

>What is an appropriate value for X?

X = unknown and i really do not think a value will ever be put on X.
I guess the only true way to solve this problem is to have some hams
form a group whose sole purpose in life is to collect old logs and
convert them to computer data and upload them to lotw. maybe some
club would like to do this But I do not think logs of dxpeditons less
then say 5 to 10 yrs old should be uploaded to lotw . how many hams
would wait a few years to save a few bucks. i know of hams waiting
years to send in for dxcc .

>On the other hand, maybe the paper versions will make it to Antiques
>Roadshow in 75 years.

Well Brian I guess it is like ebay lots of old qsl's showing up for
sell there. and guess what i hear a few have turned up at the dxcc
desk that had been computer copies and other callsigns put in the "TO
RADIO" space . There is no real answer to your questions for the most
part. The only real answer is if a club agreed to take over these old
logs and in a set amount of time agreed to convert them and upload them .
anyone got a better ideal Please let us all know

Tony,

Thanks for taking the time to give us your perspective on this topic regarding old DXpedition logs. I do genealogical research and I believe the radio logs are another important record of historical facts, just like census records, passenger ship records, and other historical records.

There are numerous groups who have tackled the job of transcribing old records into digital format and putting the information online. The Ellis Island project is one highly visible example: http://www.ellisislandrecords.org/ There are many smaller projects as well.

The first step to preserving logbook information is to create a physical collection. I was not aware the ARRL was collecting and holding old logs. If this is true, it should be publicized. I do know the Austrians http://www.qsl.at/ have a very large effort to collect QSL's and other radio memorabilia.

Whether the old logbook information is deemed "valuable enough" will depend upon a future need. "Someone" would need to sell the idea that important propagation data could be extracted if these logs were transcribed. And another "someone" would need to provide funding to make it happen. I think this "need" would have to come from outside the DXCC program where confirming QSO's solves the need of a very narrow slice of society (radio amateurs trying to achieve a certificate or plaque). Radio propagation modeling is my best guess where a need might be found.

And yes, I have seen the QSL's on eBay up for auction and have been surprised by the price they command. What caught my eye was your suggestion that some of these old cards are being "recycled" through the DXCC desk.

I would hope if this were the case the forgery would be revealed, the perpetrator expelled from the DXCC program, and the name & callsign be well published.

From: timgep
Topic: 3900 Message: 3900

From the ARRL Home page (originally from Daily DX)

The N8S online logs will be updated today, and the DXpedition is expected to upload its log data to Logbook of the World (LoTW). The first N8S QSL cards will be available in about a month. YT1AD will handle cards for N8S.

My suggestion to the N8S team:

If you do upload to LOTW soon, you should open up a Paypal account where I think many of us would be more than willing to send some money in.

Hello Bob:
I do not think the ARRL does anything with these at least a few years back they were just putting them in boxes and sending them to the basement. Someone else may have more undated info . it would be nice if they did something with them but i really think they old take them and store them nothing else
ill look into some of the projects you spoke of

The QSL Managers Society also request old logs, primarily so that they are never destroyed and never closed. Bob - N2OO is the 'main man'.

Hi:
Does any know of a source of a comprehensive list of State QSO Parties ???

I suppose I could start one by looking up each of the states and making a list,
but why re-invent the wheel ???

I look at the State QSO Parties as a grate source of filling in those missing
states and counties.

Well Rick, I finally got something, using your program.
I decided to sort of do it piece meal, seeing it would
be a lot of QSO's - and just got back my complete
upload for W7LPF/DU2 operation 1978-80 [26,762
qso's]. Now to get the rest and then will have them
all saved on CD's. Tks.
73,
Joe W7LPF

BTW - Still getting 'hits' on /DU2 log - in fact today
checked and some from 79!!

Now maybe when I get them all on disc I can empty
my one file cabinet and get rid of the paper logs.

Well there you go... I haven't even finished my first cup of coffee and I've already learned something new today! I had never heard of the QSL Managers Society, let alone their request for log books.

A quick Google search and I came up with the webpage: http://www.qsl.net/qslmanagers/ which was created by Bob Schenck, N2OO.

Thanks for the lead Graham!

I'm a member of the Qsl Managers Society, who transcribed thousands of log pages that would have gone to the dump.

I cheers me up every time I see one of the LoTW qsls for these logs.
I always wonder what the recepient says when he see these qsos for some interesting DX stations appear amoung his 'recent qsls'.

Keep those old logs. I just recently recieved a
request for a replacement by someone who got burned
out or somthing ... I was able to verify only because
I had the QSL Cards from my VQ9RS op in 1980 in a box.
I thought I had the log but i Cannot find it
anywhere.

I dont know if Lyle Meek still has the copies or not

I have a suggestion for the ARRL DX Bulletin:
Add a couple of lines to the bulletin once a month like this:

QSLs Received Via LOTW This Month:
XF4DL, VP2E, C21SX, NH6D/KH4 (list the calls)

Obviously, it would depend on us to send them in (or post them
here).

73 Rich NN3W
****

Rich,

It's pretty simple really. What they accepted was the QSL information screen printed from LOTW HTML reports. What CQ wanted was 40 confirmations, one for each zone. I could show him 37 of the 40 zones using LOTW QSL screen prints. The last three zones were actual QSL cards. In the case of one of the zones, the QSL had to indicate what zone they were in as some DXCC entities are in more than one zone. In my case, some call sign prefixes are in more than once zone. And the LOTW QSL screens did not indicate the zone so I had to rely on an actual paper QSL card to get those confirmed.

The WAZ certificate arrived the other day. Total cost? $12 plus some postage for the return of the 3 QSL cards. I did this somewhat as a challenge from my ARRL Director. I was explaining that the process was able to circumvent standard procedures and eliminated the need for me to purchase credits from the ARRL. I did it to prove a point. That point being that by NOT offering the other awards, people were able to use the LOTW infrastructure to secure their awards without providing one nickle of contribution to ARRL overhead. I must further suppose that the same is happening with county hunters, and other awards too. In the process, precious revenues are lost forever.

Ford-N0FP

> ...
> Ford-N0FP

I speculate that the whole process of getting other award sponsors to participate is bogged down in needless negotiations. What LOTW needs is a database processor for zones, counties, etc. When somebody wants to apply for one of those awards, they plug in the ARRL's $XX.XX and out comes a report with the appropriate information. In this case, LOTW is acting as a QSL manager that says...

****
"LOTW attests to the receipt of confirming log information for the following N0FP QSO: Date, Time, Band, Mode, Callsign, Report, DXCC Entity, CQ Zone 1,
QSO: Date, Time, Band, Mode, Callsign, Report, DXCC Entity, CQ Zone 2,
....
QSO: Date, Time, Band, Mode, Callsign, Report, DXCC Entity, CQ Zone 40,"
****

If you pay for the above report, embossed with the ARRL logo (which costs you the $XX.XX), you send the report into the award sponsor for credit.

In the case of most awards, the award sponsor often allows 'field checking' of logs and QSLs. LOTW simply acts as a field checker that also provides a very nifty database output screen that happens to eliminate several man-days of manual effort and costly QSL cards. Viola!

3923. State QSO Party List ??? TNX to All

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-04-20 15:37:32 UTC
From: R Johnson
Topic: 3905 Message: 3923

Thanks to all who replied on my question on "State QSO Parties" !!!

I found a lot of interesting resources from those who replied.

I'm in the process of sorting though all the Web Sites you supplied.

However, I FIRST updated my "Personal" Contest Calender for State QSO Parties
for the next few weekends.

Better to work what you can NOW and sort the rest out latter !!!

Alaska QSO Party, don't I wish it :-) !!!

TNX es 73

If you were in different counties, one account per county would help county hunters.
If that is too difficult to implement (like who knows the names of all the counties one passed through on an extended car trip and what county one was in for particular QSO's!), one per state would be nice.

73 de Brian/K3KO

3933. mobile does NOT require separate accounts

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-05-06 12:25:29 UTC
From: FireBrick
Topic: 3933 Message: 3933

County hunters do not require separate 'Accounts'

But if your travelling and making contacts, just note in your log,
entry/exit times from each county.

They when you go to upload the logs.

separate each section of the log.

For example, I would "Sign" each section of the log

Cook County section
Lake County section
etc.
In the signing process you click on the Station Menu Item and choose Edit
Location.
The first page of the Edit Location has your callsig, Grid Square, Zones,
and IOTA.
Click 'Next>'
And you will see that there are choices for State and County.

Make the changes to reflect the location for that section of log.

It's a bit cumbersome to do this for each county you made qso's in.
but the County Hunters will love you for it.

I can do this quite easily now that I have the system down.

BTW, it would be great if everyone lobied the LoTW for a easier, more
intuitive 'Signing Process'.
Many people don't even know that second page on the Edit locations even
exists.

If Barbie is so popular, why do you have to buy her friends?

From: FireBrick
Topic: 3935 Message: 3936

In the signing module
Go to Preferences

Select ADIF modes
Put JT6M in the ADIF MODE field
and then scroll down and select JT65
click on OK

Now resign and that error message should be gone.

3938. U.S. International Postage Rates Going Up

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-05-08 15:23:21 UTC
From: timgep
Topic: 3938 Message: 3938

If any of you use WF5E's Outgoing QSL Service, please
take note of this announcement

New rates effective May 14th, 2007 due to Massive U.S International
Mail rate increases. No more surface or economy rates available any more.

2 CARDS FOR $1.00 OR 1 IRC

I really like WF5E's service, and even at 50 cents per card, it
is still a good deal.

Looks like this price increase will impact the ARRL Outgoing QSL
Bureau with higher expenses.

My point is this: LOTW will become a better and better deal over
time as mail rates continue to increase.

Tim K6GEP

The WARC bands have been declared contest-free by all major contest sponsors. Let's keep it that way.

I'm an avid contester, but keeping those bands as non-contest reserves makes sense to me.

3948. WAS Award Status Function

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-05-19 13:06:56 UTC
From: Peter Nystrom
Topic: 3947 Message: 3948

I have noticed an oddity in the WAS Award Status function. When I get a new QSL that would apply toward my WAS Award it does not show it as apart of the account status (at least automatically). The award status show the old numbers.

My WAS account is set up to select QSL's via a Grid Square rule. However, it never selects them automatically.

Normally, to get them to show up in account status, I do the following: select edit rule, select change (without changing any thing), select Save Account settings. Then, the new QSLs show up in the Award Status.

It works just fine, otherwise....just thought that was odd.

Is that normal? Maybe I am not waiting long enough for the database to run automatically, and I am forcing it to update by "changing" my account settings. Not sure.

Just thought I would mention my experience. Almost half way to 50...guess I need to get back on the radio.

Well, I know that Sundays they do maintainence, but to me the website is missing, and a logfile sent by e-mail has failed to be delivered.

All good fun.

3950. China LoTW confirmation received

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-05-21 22:57:22 UTC
From: Robert Chudek - K0RC
Topic: 3950 Message: 3950

I uploaded my April 2007 QSO's to LoTW last week. Today I checked my "Most recent QSLs". It was a nice surprise to see a confirmation from Vange Yang - BD7KLO for our 20m RTTY contact! This is my first China confirmation via LoTW!

I do have a hard-card QSL from China. Using the postal route took 17 months to exchange cards with BY1QH at Tsinghua University.

HB9ZXA's site shows 33 callsigns participating from China (some are visitors). I have received a couple of LOTW confirmations (BD4XA and BA4RF), also BQ9P from Pratas.

All fine here. Though I can recall something like this in the early age of LoTW. Then the problem was cured by upgrading of an Internet browser... Right now I run both IE7 and Mozilla Firefox. In the both of them everything runs just fine.

3959. Uploaded Wrong QTH

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-05-22 22:51:52 UTC
From: Ken Kinyon
Topic: 3959 Message: 3959

I uploaded a bunch of QSO's a few weeks ago and signed them with the wrong location. I used the one I had set up for pre 1993 when I lived in Washington State. I noticed it today and thought no problem, I will just upload them again with the right location (Colorado). All went fine except that I had received several QSLs for those contacts, and it would not change those. So several stations have a QSL confirmation from Washington instead of Colorado. Is there any way to fix those?
Thanks,
Ken W7TS

Hi:
If you messed up on the location that you used to sign YOUR LOCATION for a LoTW QSO
all you need to do is:
Message-Id: <200705222238140.SM02800@z0n6x8.tmlp.com>

1- Sort you're locations FOR the QSO'S you worked them from.

2- Create a new location in the LoTW setup for really you made the QSO's from.

3- Resign your LoTW submissions using TQSL AND the correct location for the QSO's.

4- Resubmit your ENTIRE Log/Logs with the appropriate Locations.

5- Please make sure that you that you use YOUR correct ITU Zone , CQ Zone, Grid, County
and State for each location you worked each station from !!!

6- If you don't get it correct, neither You or the Other Station will EVER get credit from
LoTW.

7- Once you get things setup correctly in TQSL, you are done until you change QTH's !!!

8- If you need additional help on how to setup your "Station Data" for each location you
used. either
contract me directly or VIA the this List. Many of us can help you out.

Hi Bob,
I only messed 30 QSOs.
I did basically what you said. When I discovered it today (about two weeks later) I resigned those thirty QSOs with the correct location and resubmitted them.
However LOTW accepted and changed only those I did not yet have LOTW QSLs for. The half a dozen or so that had already been QSLed rejected and would not allow the location to be changed. That is what I am trying to see if I can fix. Is there any way to change the confirmed ones?.

Ken,

You will probably need to talk to the LoTW Desk about this situation. As you know, there is no "delete" feature in LoTW, only the "update", which you have already tried.

When you compare your situation to a printed QSL card, it's pretty much the same deal. Once you put it in the mail and it's delivered at the other end, the other fellow has your QSL, whether the information on it is right or wrong.

What you might want to consider is to create 6 new QSO confirmations and move the timestamp ahead one minute. The system may accept these new (corrected) entries in addition to the existing old (bad) entries. This would be equivalent to sending a new card after you discovered the mistake.

But the issue still stands regarding how the LoTW Desk recommends dealing with this scenario, especially if these bad confirmations have been used toward WAS.

I would like to know what the recommendation will be.

Ken,

Interesting! Thanks for the follow up.

With this new information, I suspect your corrections were still in the queue and had not been processed when you checked the status the first time. The LoTW system keeps an account history that you can access so you can investigate this yourself, if you're inclined.

Select the "Your Account" tab and then select the "Your Activity" tab on the left column. It will generate a list of all the files submitted since you began using LoTW (most current on top). If you click on the "Result" link, you will be shown the details of what, when, and the results of each file you uploaded.

You can figure out the sequence of events for the corrections you uploaded.

1- Sort you're locations FOR the QSO'S you worked them from.

2- Create a new location in the LoTW setup for really you made the QSO's from.

3- Resign your LoTW submissions using TQSL AND the correct location for the
QSO's.

4- Resubmit your ENTIRE Log/Logs with the appropriate Locations.

5- Please make sure that you that you use YOUR correct ITU Zone , CQ Zone, Grid,
County
and State for each location you worked each station from !!!

6- If you don't get it correct, neither You or the Other Station will EVER get
credit from LoTW.

7- Once you get things setup correctly in TQSL, you are done until you change
QTH's !!!

8- If you need additional help on how to setup your "Station Data" for each
location you used. either
contract me directly or VIA the this List. Many of us can help you out.

3965. RE: [ARRL-LOTW] Uploaded Wrong QTH

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-05-23 16:19:18 UTC
From: Ken Kinyon
Topic: 3959 Message: 3965

Ok,
Here is my final evaluation after checking my activity report.
All of my records for the correction were accepted and flagged as
duplicates.
When I went back to MY QSOs and checked the details for the contacts a few
minutes later, only those not QSLed by the other station were changed to
correct QTH.
However when I rechecked this AM the QSLed ones were changed also.
This leads me to believe that the program was delaying updating those
records until it had checked and updated the other stations' data.
That's my story and I am sticking to it. ;<)
I did send a query to LOTW@ARRL about this before I found it resolved and am
interested in what they will tell me.
73 and thanks again,
Ken W7TS

Subject: Re: [ARRL-LOTW] Uploaded Wrong QTH

Ken,

Interesting! Thanks for the follow up.

With this new information, I suspect your corrections were still in the
queue and had not been processed when you checked the status the first time.
The LoTW system keeps an account history that you can access so you can
investigate this yourself, if you're inclined.

Select the "Your Account" tab and then select the "Your Activity" tab on
the left column. It will generate a list of all the files submitted since
you began using LoTW (most current on top). If you click on the "Result"
link, you will be shown the details of what, when, and the results of each
file you uploaded.

You can figure out the sequence of events for the corrections you
uploaded.

Ok, Now I am really confused unless there has been some manual
intervention at
the LOTW. I rechecked this morning and those QSO's that were QSLed and
the
changes were rejected, have now been changed to the correct QTH.
Thanks to all,
Ken W7TS

Subject: SRE: [ARRL-LOTW] Uploaded Wrong QTH

Hi Bob,
I only messed 30 QSOs.
I did basically what you said. When I discovered it today (about two
weeks
later) I resigned those thirty QSOs with the correct location and
resubmitted
them.
However LOTW accepted and changed only those I did not yet have LOTW
QSLs for.
The half a dozen or so that had already been QSLed rejected and would
not allow
the location to be changed. That is what I am trying to see if I can
fix. Is
there any way to change the confirmed ones?.

LOTW is down to Tuesday.

Have a contest's worth of QSO's burning a hole in my pocket waiting to be uploaded.

Checking LOTW for new QSL's is better than having the postman come.

Am I addicted?

Brian,

Well... you can satisfy your addiction to some extent by participating in the other online QSL system. As a matter of fact, you will get cards even before you post your own log! So even if you're a QSL slacker, your inbox will still capture cards for your edification... ;-)

Okay, I am adjusting the fit of my flame suit so I should be ready to go any minute now! Flame away...

Hi,
First of all, this is not intended as criticism of those people who were not happy with the down time. It is being asked in order to help me understand why it is important to some that the LOTW be up 24/7. It seems to me that knowing in advance that it will be down is more than we get from a lot of web sites. It is not a real time system, so what is the urgency of accessing it? If it was up 50% of the time and I knew when that 50% would be in advance, I would be more that satisfied. I realize that other users have other requirements, I am just curious what they are.
Thanks,

Hi Hans,
But if he knew the up/down schedule, he wouldn't have to make two trips. ;<)
By the way, Tanganyika has been Tanzania since 1961. You must be nearly as
old as I.
What is the /4ID on your signature? Since your web site (which I really
enjoyed) is Navy oriented, I am guessing it is not the 4th infantry
division. I was also in the Navy, (in the 60's) (an Airedale patrol puke.
;<). I did spend two summers on destroyers while in college, however. I
didn't make it to retirement though, after the navy I spent 33 years as an
air traffic controller for the FAA.

Ken...it's because it's FREE!
Today's society expects and demands that services that are free be available at all times.
Of course these same people don't answer the phone 15 minutes before quiting time at their jobs.

And as you said....my ComCrap internet provider is down frequently....you can't even get to a live person to complain and get a refund.
Seems to me, paid for services that aren't working should be our first complaint.

I don't think anyone was complaining that it was down this weekend, were they? At least they announced it ahead of time, and it was a fairly good time to do it. (maybe with the exception of Sunday night) 99.0% uptime is all I ask for.

Looks like there is some more down time in the near future.

May 29, 2007: Server upgrade postponed -- Due to a technical problem, the server upgrade scheduled for last weekend has been postponed for a few days.

because it's cool. The more cool it is the more it should be up and the more people will use it. ;) I check it all the time, mind you it does not change much but I am hopeful.

I would think Japan would have something like LotW. Does anybody know if there are any other LotW-type 'net databases out there?

I think if the prime directive of LotW is to get all amateurs as possible to participate, it is in
the best interest for the service to be up and running as much as possible. Less downtime = better service. Better service = more users. With only 16,000 of the world's amateurs, LotW has a long, long way to go.

Long live LotW!

I got a new laptop between initiating LOTW and getting my postcard in the mail. I installed LOTW on this machine but when I try to use the password from the postcard it doesn't work. I also tried to use the manual certificate command and that didn't work. What do I do? Thanks and 73.

You must go back to the machine where you originally installed LotW and use the postcard password on that machine to complete the process. Once you're done, you can export the certificate and carry that to your new machine and import it.

If you no longer have your old machine, then you've lost your private key. You must start over.

Gosh, I just uploaded my first log to LOTW and out of 48 entries, I only get one WAS and no DXCC entry validations. I'm brand spankin new at this but I would have thought more hams would be using this program. Considering the cost of postage and IRCs for QSL cards. I have entrys from multiple states and DX countries in my uploaded log.

I can't imagine why more hams world wide don't use it. Am I wrong or do others here find this to be the case?

With the prices of sending Airmail or even 1st Class Mail, I have wondered the same. I am running currently about 30% of my logbook confirmed by LOTW. The bulk of my operation is during 6 meter openings and HF contests. I have friends who do not use LOTW and I have heard that they want the actual card rather than an electonic confirmation. I am trying to bring them over to the electronic age of QSLing. Each person has their own reasons for using it or not. I personally did wait for a long while before signing up but now that I have, I'm glad I did. I have not used it for any of my awards to date, but I will. Also, not everyone is as punctual when it comes to uploading their logs. Even though LOTW settings have been incorporated into many logging programs making it possible to upload a stations log with a few mouse clicks, some just procastinate. I use LOTW not necessarily just for me, but for all the other users that may need my QSL, too. Maybe some feel intimidated about
the entire painless "getting started" process but hopefully more will come on board as time progresses. You know the ol saying, "you can bring a horse to water but you can't make em drink". I hope you don't get discourged but in the world of QSLing, you have those that do it immediately, those that do it once in a great while, and those that don't do it at all. This is the case with LOTW. All we can do is attempt to educate those that don't use it but again it comes down to simple personal preference.

And it does not stop there as in reviewing my log, the bulk of those confirmed are stateside. I would guess that 90% of my LOTW confirmations are stateside confirmed with the rest being DX confirmations. I can say that everytime I download my latest LOTW QSL'ed contacts to my logging program, the number slowly rises. Some are better than none. Hopefully more DX will come on board as the foreign cards are the most expensive part of QSLing. Granted, my stamp collection won't grow very much anymore but I sure will be saving lots of money that can pay for things like gasoline!

HI K5HSV,

Here's a link you might be interested in.

http://www.hb9bza.net/lotw/index.html

It shows that there are currently 302 countries using LOTW and the calls of those in each country.

Two people have made 5BDXCC via LOTW alone and many have 8BDXCC. Undoubtedly many have WAS on several modes and bands via LOTW alone.

The key is to have worked many stations per country or state. Given the low % participation in LOTW, one is guaranteed poor DXCC stats if one has only worked one station/country. That is my situation on 160M.

A high percentage of contesters use LOTW. Work some contests to improve your return.

Hi all,

I guess we are not too many in France to use it, but if you want a
piece of my mind :

- I find it very complicated to start (yes, I'm 58 years old but I
have been using computers last 17 years of my professionnal life)

- You always miss the card itself, the picture, the personnal touch,
signature.

I use both EQSL and LOTW and I must admit
that I have a far , far better return rate on dxpeditions with LOTW
Why ?????....
but I miss the picture. Though many paper cards or EQSL's don't have
one, just plain text...

I resumed ham radio when I became retired (sept 2005) For 1619
uploaded qso's, I have 160 LOTW confirmations, dxcc : 68 , WAS : 17

Not too bad ?

Hi Paul,
I have 401 QSOs in the past four months, and have about 105 confirmations. Most from contest participants. Some come immediately, some come in a few days, some come in a month, some seem to never come and then surprise....then I expect that some will never come.
However, I don't think QSL via cards will get you any better return. I respond to paper cards sent to me, and to a few DX and others that I think would be nice.
I have heard many say that is too complicate...but I really think they are just giving excuses. It is not any more difficult than figuring out an antenna, understanding your radio, or tuner...for that matter sending email. I think the most people just need an LoTW elmer to show them the process and ease their discomfort with the process.
I find it easer to use a index card to keep track of your password, and make it easier to remember the steps. Someday, I should write that up, or maybe others have a good method...anyway. But, once you understand the steps it is just remembering to do them. It takes me less than a minute to upload my log after a weekend contest or activity.
I hope you have good fun making QSOs and the QSL confirmations will follow eventually...If you need Texas...just look for me on PSK31.

Most of the current logging programs make uploading and downloading LoTW and EQsl data a matter of just a few key clicks [not relating to CW :)].

I use PDA's LOGic, making it a snap, but most of the other programs do the same.

I upload as a service to other Hams, and I also send out paper cards as required/needed.

I will admit that the return rate is dismal, no matter what route is chosen (around 5%).

However, it is all in a day's work.

You didn't mention how long ago those contacts were made. I often get LOTW confirmations a few years after the QSO, although with contests it is often immediate (except for contests, I upload monthly). I still need to go back through my paper logs to add contacts when I had a different call, however. After using LOTW since shortly after it started, my return rate is nearly 24% (1384/5835).

I feel the same way. I stated on 6 meters last summer and I have made a modest 64 contacts. I have sent out QSL cards to ever person that I have contacted. I am only missing 17 cards in return. Most of these are states that I need to get a little closer to WAS. I do like seeing what other people send on the QSL cards and many I have hanging in my shack for friends to see. But I would be just as happy see the contacts come back on LOTW. Now I upload every month or like after a contest or a day when I get 5 or 6 contacts I will upload, and send out cards. I have uploaded all 64 contacts on 6 meters and 10 have come back.
Well hope it works out and the word gets spread. you can also find a call sign on LOTW and it will tell you if they have uploaded ever and when.

Hooray for KU9C and crew.

When I sent in my donation prior to operation, I said LoTW would be great.

Repeated that when I sent in my qsls.

Today, the qsl Santa was good to me.!

I believe that if you are selling me a Big Mac, you should do it in English.

I wish to extend a special thanks for the encouragement and special pointers from experienced users of LoTW. I'm going to start with my local repeater club, introducing LoTW in conversation. A couple of comments I've received from them, "It's too complicated to setup and work". Keeping in mind I'm live in a gated community of mostly retired hams and that some still use paper logs. But most of them use computer logs now. I look forward in helping others with this program on a local level. A QSO or two and you have another satisfied LoTW user on board... HiHi.

A special thanks to Darryl Wagoner, here in this group for his help talking me through creating and sending my first log.

Bill, do you mean your BS7H _2007_ QSOs were confirmed via LoTW? If
yes, this means they upload only "donated" QSOs, but not full logs.

No LoTW confirmations for 2007 operation here yet.

I personally think this is a great way to encourage DXpeditions to use LoTW. Publicizing their intent would have been nice but it's still more than fair.

As far as I can see, everyone who wants a card will get one either direct or by the bureau. All will get LoTW confirmations, some sooner, some later.

I see they have sent out a release that people who have supported the expedition will have their QSOs uploaded to LoTW. I hope they get around to doing the same for people like me who have sent in a contribution along with their QSL cards.

That's the plan. We're still working the bugs out..for example, it's tough to tell who contributed with QSL cards till you open all the envelopes, as I was hit with severl thousand within a week of the operation end. However, Gerry's note summarizes my plan. Its a work in progress...we'll see how it goes, and then, maybe suggest 'best practices' for future operations. I think this is FAR better than opening the LOTW after the operation. This gives the op that sends in a card or a donation the chance to use LOTW to avoid sending that precious piece of cardboard in.

I would appreciate your comments, both pro and con. Only with constructive criticism can we make this work better in the future

From: Gerry Hohn
Topic: 3996 Message: 4003

Steve,

The only issue I see up front is for those who want an early LoTW confirmation and a QSL card based on their QSOs with the DXpedition. If one send in a pre-operation donation with the expectation of a possible LoTW confirmations and post operation, wants a card, they would have 2 mailings to contend with. Paypal would help for the pre-operation contributions but not all folks use Paypal.

I'm sure there are many other thoughts coming your way on this. The main point is it's not "pay for Qs", it's pay for a quicker confirmation. Just like direct with GSs rather than bureau. Everyone will get a confirmation that wants one.

4004. Re: [ARRL-LOTW] BS7H qsls received via LoTW today

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-06-11 04:55:09 UTC
From: Steven WheatleyKU9C
Topic: 3996 Message: 4004

I don't see it as 'pay' for anything, per se. The fact of the matter is, in my little office at the moment, I'm looking at perhaps 6000 envelopes, and a few thousand yet to open. I've had some interesting discussions over the years with managers about the best way to 'mail out' cards.

One argument is to hold them all and send on the same day. Avoids the 'my neighbor got his, where is mine' email. However, it does keep a stack of cards sitting about that could be in the mail box.

THe second is to mail them out in some fashion. Then, the quesiton of how do you prioritize comes up. Some would argue first in first out. I tend to try to get them out ASAP, but feel that those th at donate should have a higher priority in some fashion or the other. Not to 'hold the non-donors' back, but to work the donors first....and attempt to, as quickly as possible, get them all out.

The LOTW concept, while I'm sure we'll find some flaws in the logic, has the added advantage of giving some value add to LOTW (this is the first time I've done this, as I typically hold the log for some time before uploading). It strikes me as the logical thing to do, as the folks get a card, and if they use LOTW, they can use that for their submission rather than sending in the card (it does amaze me how many of those get lost...HI).

Thanks for your comments. I'll keep reading....and I'm going to try some different things with LOTW on this operation, which should pique folks interest as BS7H is/was the rarest of the rare. Hopefully it's down a rung or two, but the recently completed operation is helping folks get to the top!

Really fast, it accepted, and credited my BS7H LoTW qsls (and a few others entity band/modes) in less than a week.

Funny part of why it's so fast...
This last LoTW submission, the Application History says Zero Qsls Accepted and the Reason says
Manually completed by DXCC Desk.

So I guess the site is faster because they are doing it by Hand??? lol

From: ottuser
Topic: 4012 Message: 4012

Hi,
Have been trying to get all the logs I have corrected where needed, double checked, and where needed make any needed changes. I have a 'ton' on logs dating back to the 50's that I am going through, and includes the overseas 'rest-stops'. My question is:
Going to the LoTW site [which I think is a lot faster now with new server], I downloaded and saved in their respective files the confirmations, some covering a 30-year span. I am stuck with the other part of the puzzle: I want to know if it is possible to download from the server all the submissions you made [of course doing individual sites - HB/CT/4L/DU2 etc.]. I know you can do it 25 at a time [like your confirmations], but where is the option to download the your input files? Is it even possible?
Thanks,
73,
Joe W7LPF

on the left when you chose your QSOs there is a
download report.
YOu can specify dates and calls or all there

Yes. On LotW, pick "Your QSOs". On the left hand side of the screen is
a "Download Report" selection. That'll give you a single ADIF file
containing all of your QSOs.
You can select what QSOs to download (by callsign, for example) using
my query screen: http://www.rickmurphy.net/lotwquery.htm

From: HK3CW
Topic: 4015 Message: 4015

I recently synchronized my logging program (logger) with LOTW. I got a lowt-mismatch.adi file; I looked at it and everything is OK. I found a friend in there and asked him to check his side of the logged qso and its the same (it matches 100%). So in review, I can't find what's wrong..can anybody give me a hand to understand this

Hi Rick, etal -

If you go to the left of the My QSOs - you get the
download for the QSL's received. In the center you
can select QSO's to list, and there you can get either
the QSL's [hits] received, or the QSO's [uploaded
files you uploaded to the server] - in either case
from that center option area I find no place to
save to any type of file - or am I just brain dead?
[My wife would agree by the way].
I tried several times in the center area - and
'program' it to select [*] any callsign - and then
for my different calls - separate of course - and it
will give me a list with all/all my calls I uploaded -
and I ask in date order and it always gives it to
me alphabetically??? And I always do not/not
check confirmed QSO's only. But be that as it
may, I can not see where I can save even that
kluge! ??
Joe

I don't know of any way to download QSOs directly from the LotW site.
You can download QSLs (confirmed contacts only) using the "Download Report" selection on LotW's Query page.
If you want all of your QSOs, use the query page on my website.

In addition to the popular Straight Key Century Club spottting/sked page and one for experimental digital modes, I have created one for Worked All USA States . You can find it at http://www.obriensweb.com/was/was.php

Just fill out the simple cookie information. This is for any mode, any bands. Placing your mouse briefly over the callsigns present will enable you to see what State they reside in. Feel free to announce what states you are looking for , band, mode, etc

LOTW was off-line all day yesterday and just tried to log-in again
this morning and it is still off-line. So if it started on Wednesday
and still off-line as of Sunday - Holy Crap that is some serious downtime!

The server upgrade was days ago and it was up after that.
Lotw was working till I checked it this Sunday early am.
Sundays mornings have been frequent down times in the past.
I think they do backup or whatever.
In the past, the Sunday am downtime is usually over by 1500z or so.

I tried several times yesterday to upload a log file and every time I tried to log-in, I got a system down webpage. Tried on several different PCs. Tried again just now and same message:

LoTW Off Line
The ARRL Logbook of the World Server is temporarily off-line. Service will be restored as soon as possible.

Andrew,

You want a database of "know" LOTW users?

http://www.hb9bza.net/lotw/index.html

It updates several times/month.

HB9BZA's database works FB !!!

It is integrated into LOGic 8 so when you enter the callsign You can see the Membership of all the groups that call belongs to.

Twice a month I try to download my "logreport.adi" and then upload to the HB9BZA site.

Last time I got a message back saying that I added 5 new users to the database.
Makes a "Little Pistol" think like someone slipped a VIAGRA into his drink :-) !!!

ARRL Headquarters Experiencing Computer Outage (Jun 18, 2007) -- A severe thunderstorm on Saturday knocked out the ARRL HQ computer system. E-mail, Logbook of the World and other services that rely on our computer system have not been available since Saturday. The ARRL HQ information technology staff expects to have the system back up later today. We will post a notice to that effect when the system is again available.

A QSOP (QSO Party) station, that uploads their log to LoTW and forgets to
'edit station location' and enter their county into the signing module?

Yes I know LoTW is not currently used for crediting counties.
But it is useful for the many of us who don't chase paper, just goals.

LOL, lets all check that our state and county info is in the data we submit.

Did anyone see my lost carrier?

Do you have the latest TQSL configuration file installed?
Log in to LotW, then select "Your Account". Select "Your Certificates"
from the left hand menu.
You should then click on "Download current TQSL Configuration File".
Click "Open" to install the new configuration file.
You should then be able to run TQSL and use File/Preferences/ADIF Modes
to add JT6M as explained earlier.

4044. Field Day

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-06-26 04:35:52 UTC
From: K0HB
Topic: 4044 Message: 4044

Most contests result in around a 15% LoTW return within the first 24-hours.

Field day this weekend returned about 3% on LoTW.

0% so far.

Scotty W7PSK.

Yahoo! oneSearch: Finally, mobile search
that gives answers, not web links.
http://mobile.yahoo.com/mobileweb/onesearch?refer=1ONXIC

4046. so far I only have a few FD lotw qsls

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-06-26 10:23:10 UTC
From: FireBrick
Topic: 4046 Message: 4046

I've always thought the ARRL should make LoTW FD submissions mandatory for inclusion into QST results.

In fact, I always thought ARRL should make all it's contests, LoTW submission mandatory.
I can't help but feel it would actually INCREASE contest participation of 'casual contest operator'.
To say nothing of easing bureau and contest station hardcard qsl bureau.

I wonder when we'll find the answer to all the April snow...

From: Bill
Topic: 4044 Message: 4049

I guess I am doing a little better than most, but not great. Worked about six hours and, after dupes, had 282 QSOs in Field Day. I have 12 LotW QSLs so far.

KI6VC, KF6PG, W6RKC, N2BJ, K8YTO, WB8JUI, AA8IA, K0GEO, W7OM, WA7YAZ, W9BOK, AND K6TD.

I uploaded my log 2007-06-24 20:29:06. It was processed at 2007-06-24 20:29:39, only 33 seconds after submittal.

For those that don't know, you can click on "Your Account" and then "Your Activity" and see usually see when you submitted and when it was processed. There have been a few times when the submittal and the result were shown only once, I assume that means there was no backlog.

Bill, N5RR

My 2 cents is that for Field Day, you get a lot of club stations on the air that don't normally operate in contests, and because of that, they aren't set up to upload to LotW. Also, because you don't normally need to submit full logs for FD (though it's my understanding that you do need to have them available for "audit" purposes if necessary), there might not be a single consolidated log available for uploading. For about 5 years I did the scoring for my radio club, and pretty much every one of our stations (we'd typically run 12A or 13A) had a slightly different logging setup. We'd have everything from paper logs to every kind of electronic log that you can imagine. For scoring purposes it wasn't too difficult to get the QSO counts per band per mode from that, but trying to merge the logs into a single comprehensive file was challenging, to say the least.

My guess is that unlike conventional contests (and remember, Field Day isn't a contest, it's an "operating event"!) where there are teams that regularly contest together, FD draws from a much wider population.

Would it be good to have all FD logs uploaded to LoTW? Absolutely. Should it be required for FD? In my opinion, no, you'd loose participants. (But maybe offering bonus points to the submitter, like the bonus points for web submission, would be a good incentive.) Should it be required for all ARRL contests? I'll let someone else debate that.

I'd support that incentive.

> Should it be required for all ARRL contests?

Use of LoTW should NOT be required of anyone for ANY reason. The LoTW is a nice facility for those who are 'into' electronic QSLing, but it's not everyones cup of tea. Requiring participation in LoTW as a condition for participation in some OTHER activity would be a really arrogant and bad idea.

K> 73, de Hans, K0HB

It is not about arrogance, it is about reciprocity. I consider
electronic QSLing in all meanings equal to paper cards, therefore if
someone does not reply on my electronic "QSL" why should I reply on
his paper confirmation request?

Besides, giving a paper confirmation on someone's request costs me
money while giving LoTW confirmations is FREE.

4054. Field Day Carbillo

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-06-27 15:44:01 UTC
From: Hank Garretson
Topic: 4054 Message: 4054

Did a play-around 1D Field Day effort from home. Used TR POST to
create .cbr file.

Tried to use LOTW TQSL to certify the .cbr file for LOTW
upload. First time through, TQSL said I had invalid contest name,
and indeed there was no CONTEST line in the .cbr file that POST
produced. I added CONTEST: FD as line six in the .cbr file and
edited my TQSL Cabrillo specifications to include FD contest in field six.

Tried TQSL again and it accepted CONTEST: FD ok, but now hiccuped at line 12.

Here is the first part of the .cbr file:

```
START-OF-LOG: 2.3
CREATED-BY: TR Log POST Version 6.82
CALLSIGN: W6SX
CATEGORY: MULTI-ONE ALL HIGH MIXED
CLAIMED-SCORE: 368
CONTEST: FD
NAME: Hank Garretson
ADDRESS: 377 Monterey Pine Road
ADDRESS: PO Box 1213
ADDRESS: Mammoth Lakes, CA 93546
OPERATORS: W6SX, KB1MWO
QSO: 14000 CW 2007-06-23 1801 W6SX VE6NEW 2A Ab
QSO: 14000 CW 2007-06-23 1802 W6SX KB7ARA 3A Ew
```

Here is the TQSL error message:

```
Signing using CALL=W6SX, DXCC=291
Error: Signing aborted due to errors
Error: C:\Documents and Settings\Compaq_Administrator\My
Documents\Chapster\Eudora Attach\FD.CBR: Operator aborted operation on line 12
```

What have I done wrong?

73,

Hank, W6SX

Mammoth Lakes, California

>
> What have I done wrong?

2 things jump out. Usually, the lines are all CAPS (don't know if that's critical) ... AB vs Ab

Second, you probably need to use valid section abbreviations ... Ew is not a valid section abbreviation ... EWA (if that's what you worked - Eastern Washington) is.

Just my guess.

Ron

It would be mind-bending ARROGANCE if ARRL (who runs LoTW) were to say: "You must participate in our QSL system, or you can't play in our contest."

I'm an ARRL member and I've participated in LoTW since day-1, but I consider it nothing more than an excellent alternative way of QSL'ing. (I just wrote a check to FDS-GRAPICS.COM for another 1,000 paper cards too. I'd be happy to send you one for our 20M CW QSO of 19-Feb-00)

If some other fine ham does not participate in LoTW, I don't yet have the arrogance to say "You will QSL via LoTW or you will not be allowed in the contest (or other ARRL activity)".

would you settle for????
To win a award, you must submit a log to LoTW?
Seeing as you you already have to submit a log for the score checkers.

I wholeheartedly agree that you shouldn't stop anyone from taking part,
besides, how could you enforce that?

Yep, they did it with WAS/ DXCC and it didnt garner
any new subscriptions, in fact they lost a ton (mine
included) at the time. About 20 of us in my club
dropped. Took me nearly 15 years to join back up.

IF they had thought that through that was 15 years of
subs they could have kept.

No, I wouldn't settle for that.

Using their contest sponsorship as a "lever" to increase participation in LoTW (or any other ARRL function) is not appropriate.

LoTW should stand on it's own merit, without "subsidy" from other ARRL functions, or fail.

People are inertial -- they just keep doing what they're doing. If new technologies were left to stand on their own merit, too many would be gathering dust in the corner of some lab. It is often necessary to help prospective users become aware of a new technology and its virtues before it will be adopted in significant volume.

LotW's current adoption rate is squarely in "walking dead" territory; were it the product of a profit-seeking business, it would have been terminated years ago. Being funded with ARRL dues gives LotW more leeway, but as ARRL management discovers just how expensive it is to manage a 24x7 software utility there will be increasing pressure for LotW to fish or cut bait. Some aggressive marketing is in order.

I see nothing in either the WAS or DXCC rules requiring participation in LOTW. They allow you to make submittals using LOTW confirmations, but it is not a necessity.

Hank Garretson wrote:

Hello Hank ,
Not sure, but maybe, only maybe , LoTW TQSL like to see also RST (599)
when start converting cab to tq8.
TQSL is a little bit strange creation , must say.
In the same time, when using TQSL and manually enter new ADIF file TQSL
not asking RST at all and TQSL signing
such adi file .

But what I find during this experiment with manual entry is also
interesting.
I create test.adi file with only one QSO.
Here is all what is inside of one qso adif file :
<CALL:7>yl2test
<BAND:4>160M
<MODE:2>CW
<QSO_DATE:8>20070604
<TIME_ON:6>223300
<EOR>

And now what TQSL software say :

Wrote 1 QSO records to C:\Program Files\TrustedQSL\LOGS for uppload\test.adi
Signing using CALL=YL2KF, DXCC=145
C:\Program Files\TrustedQSL\LOGS for uppload\test.adi: wrote 3 records
to C:\Program Files\TrustedQSL\LOGS for uppload\test.tq8
C:\Program Files\TrustedQSL\LOGS for uppload\test.tq8 is ready to be
emailed or uploaded

So, now is THREE records (I do not really recognize - is it QSO record
and only word record the same
in this case) . From where is three qsos (or records?) if only one qso
is entered ? Maybe bugs , ja, latest TQSL version. 1.11
How to read tq8 files? Maybe some secret software can see datas inside?

My first reply on this thread was too terse. According to the ARRL Contests page, name your Cabrillo file callsign.txt or callsign.log (i.e., your callsign). Create an email with your callsign and only your callsign in the subject line. Attach the Cabrillo file to the email. Send this email to ContestName@..., e.g., FieldDay@.... If you decide later you've omitted some qso's or some other error, create a new Cabrillo and send this new file to ARRL using the same process.

Not a chance! A contest scoring system should be about how well a boy-and-his-radio competed in the game. Nothing more. Nothing less. Poluting the contest with a "bonus" for your choice of QSL method in order to "subsidize" LoTW is a really, really bad idea.

As a point of interest from my LoTW returns (about 7,000 QSL's for 40,000 entries), contesters are far and away the largest user group already.

Vilnis,

I always get two extra records regardless of the number of QSO's signed.
I doubt the extra records contain any great state secrets.
V1.11 works just fine.

I look forward to getting the 11 QSO's we've had since 1997 confirmed
via LOTW.

Thanks Ron,

Don't think Ab and Ew are the problems.

Regarding AB, have uploaded other TR Log generated logs to LOTW with no problems. These logs contained Ab. Just to be sure, used Notepad and capitalized AB and tried TQSL again--same result--it bombed on line 12.

Regarding Ew, TQSL burped on line 12, Ew is on line 13. Have also successfully uploaded TR Log generated logs containing Ew to LOTW. These logs have been also been submitted to ARRL for contest scoring and were included in the contest final results.

To try to see what is happening, I used N1MM logger to generate a bogus Field Day log and created an ADIF file. Tried TQSL on this log and it bombed. Again on the first line containing contact data.

So, I am still at a loss.

My guess: That's not a valid QSO - no signal report sent/received.
Also, google searching around says that "The Cabrillo format does not
accomodate Field Day."
"FD" isn't one of the valid Cabrillo contest identifiers (again, based
on a bit of Googling around).

Relational Database systems and medium / large platform O/S's allow the system operator to change the maximum number of users at any time. Often it may be set to zero when they need to keep the system up but prevent additional users from logging in (once they are already in) while some activity is performed. You also see many Relational Database Systems startup with max users = zero until the startup and recovery process is complete.

besides, on FD anyways, several operators will often work under one call sign, for me to take credit for a contact that was actually made by another op under my call would be cheating towards WAS or other awards.

Not a chance! A contest scoring system should be about how well a boy-and-his-radio competed in the game. Nothing more. Nothing less. Poluting the contest with a "bonus" for your choice of QSL method in order to "subsidize" LoTW is a really, really bad idea.

As a point of interest from my LoTW returns (about 7,000 QSL's for 40,000 entries), contesters are far and away the largest user group already.

It would be mind-bending ARROGANCE if ARRL (who runs LoTW) were to say: "You must participate in our QSL system, or you can't play in our contest."

I'm an ARRL member and I've participated in LoTW since day-1, but I consider it nothing more than an excellent alternative way of QSL'ing. (I just wrote a check to FDS-GRAPICS.COM for another 1,000 paper cards too. I'd be happy to send you one for our 20M CW QSO of 19-Feb-00)

If some other fine ham does not participate in LoTW, I don't yet have the arrogance to say "You will QSL via LoTW or you will not be allowed in the contest (or other ARRL activity)".

K> 73, de Hans, K0HB

It is not about arrogance, it is about reciprocity. I consider
electronic QSLing in all meanings equal to paper cards, therefore if
someone does not reply on my electronic "QSL" why should I reply on
his paper confirmation request?

Besides, giving a paper confirmation on someone's request costs me
money while giving LoTW confirmations is FREE.

For field day they give extra points for a whole host of non on air things. Some you club may have done and some maybe you didn't. No one would have to do it but extra points if you do. If any contest would lend it self to this concept Field Day would.

BTW am I mistaken or do some contests no longer accept paper logs?

Julio, W4HY

I don't think so.
We used a club call at Field Day
That means we would have to go through talking the club into the benefit of LOTW.
Then we would have to talk the trustee into signing up.
And considering that the "general ham population" doesn't know LOTW from a hole in the ground or care about it, it would probably be a losing battle.
Nope, I don't think that would work.

4086. OFFICIAL? VUCC will not be offered via LOTW anytime soon

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-06-29 20:15:49 UTC
From: cord72501
Topic: 4086 Message: 4086

I sent an email to the ARRL asking what the timeframe is to offer VUCC via LOTW. They referred me to one of their programmers. He replied "There are no present plans to offer VUCC via LoTW." OK, asked him some more questions and this is what I get:

I didn't say it would never happen, it's just not in the present plan. It's certainly something we are interested in, but given our current resources, the costs involved, and the anticipated level of activity, taken together, VUCC via LoTW just hasn't made it into the plan ahead of the other things we have on our plate.

This reply only opens up more questions to ask what the holdup is. Additionally, it appears the ARRL is underestimating the number of VHFers who are waiting for VUCC to become available via LOTW. I am going to ask my division director for a better answer.

Stay tuned.
73,
Cord KD5J

Cord,

I got the same answer last year.

Perhaps it is not worth the programming effort. However, there should
be some way to get credit-- even if it is a hokey.

I proposed to the local VUCC checker that I make a copy of the detailed
screen dump for each LoTW QSL.
They can all be put into a single Word or WordPerfect document. Then
put that on a CD and mail it to the checker.
If that wouldn't be secure enough, I offered to sit down with the
checker and show him the LoTW QSL's while logged into LoTW. He is
checking with ARRL on this.

I understand CQ checkers accept such screen dumps for their awards.

I have 125 grids, many new, already confirmed via LOTW and they are
currently worthless.

If the ARRL starts accepting screen dumps for verifications, you might as well throw the entire LoTW security system out the window.

This screen dump concept came up a while back. I proved to the fellow that *I* worked the particular DX station he was submitting, not him. I used simple PDF editing tools, removed his callsign and inserted mine. This is no smoke and mirrors, just everyday graphic arts tools.

What the ARRL is telling you is the way to get VUCC credit right now is to exchange a printed QSL card. The CQ awards manager... well that's a different organization with a different level of security.

Well, I dont think screen dumps are going to be the solution. I happened to have a conversation with someone this afternoon who is familiar with the issue and a part of the ARRL field organization. He said it was the intent to have LOTW track and submit ALL ARRL awards and they have been dragging their feet to get it going. He believes, as I do, it will not require a major software change to implement VUCC since grid squares are a parameter in the system. It just take some programming changes to have grids recognized as "entities". Awards via LOTW are a benefit of ARRL membership. The amateur community should be able to take full advantage of the benefits of using LOTW. As K3KO noted he was also told "no" last year, at a minimum the ARRL should implement a plan to implement VUCC and other awards in atimely and reasonable manner. It is a win/win situation for both sides: LOTW users save money on postage/printing costs and the ARRL makes money off of the credits purchased for awards.

I am awaiting an official answer from my division director which will take a few days Im sure. I will keep the thread updated.

4090. deleting a certificate

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-07-01 15:54:41 UTC
From: FireBrick
Topic: 4090 Message: 4090

I had obtained a certificate for a station I was serving as his manager.
I would upload his qso's to LoTW.
He did not have internet access at that time that permitted him 'private'
use.

He now does, and has obtained his own account and is uploading his qso's to
that account.

What I'd like to do...is remove it from my certificate list.
It will not expire till 2009.

I want to make sure, that if I go to tQSL Certificates and select the
certificate choice.
When I click on 'Delete', it will not cause a problem with any of the qsls
previously generated and any that DX stations new personal certificate will
generate.

Also I want to make sure it won't effect his new certificate and use of
LoTW.

Has anyone ever done this?

4091. certificate: Confused

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-07-01 16:33:30 UTC
From: Andrew O'Brien
Topic: 4091 Message: 4091

I attempted to sign a ADIF file for upload to LOTW today but was
advised my certificate expired. When I attempted to send arequest for
a new one, I was told I had an overlapping certificate. So, after I
logged in to my account I noticed...

Certificate 74321 EXPIRED Valid: 2003-09-29 00:00:00 - 2004-09-28 23:59:59
Call sign: KB2EOQ
DXCC entity: UNITED STATES OF AMERICA (291)
QSO Dates: 1987-11-01 00:00:00 - 2003-06-01 23:59:59

Certificate 109989 Valid: 2006-05-16 00:00:00 - 2009-05-15 23:59:59
Call sign: K3UK
DXCC entity: UNITED STATES OF AMERICA (291)
QSO Dates: 2003-05-13 00:00:00 - 2007-05-13 23:59:59

So, my old call certificate expired. My new call certificate is
"valid" but the QSO date range ended 2007-05-13.

What is my next step ?

Looks like you forgot to change the QSO dates on the new certificate. I think all you need to do is request a new certificate with the correct QSO dates. Some one correct me if I am wrong.

Deleting the certificate on your system will not affect the QSOs
already uploaded to LotW. Doing that will not permit you to upload any
new QSOs, but that doesn't seem to be a problem.

>Also I want to make sure it won't effect his new certificate and use of
>LoTW.

It will not affect the certificate that has. I'm somewhat suprised that
LotW let him make another certificate request for the same call, but
now that he has his own valid certificate, whatever you do with your
account won't affect his.

Thanks, JV. The additional odd thing is that I just uploaded using my usual
DX Keeper software (rather than the manual method I used earlier today) and
the upload was accepted by LOTW,

Andy.

I posed my concerns about the ARRL and the issue of the VUCC award via LOTW to my division director.

The answer I received is this:
The ARRL does intend to award VUCC via LOTW. It should be implemented in the early fall.

The ARRL board meeting is coming up and some more specifics may come out afterwards.

I encourage you to contact your ARRL division director and let them know you want to see VUCC via LOTW.

73,
Cord KD5J

I am aware of that! That was not the point of my comment. I learned to log a contact in accordance with the call that was presented during the QSO. That includes any portable or other unique identifiers. I don't expect to have it changed long after it was entered correctly into my log.

Then if you feel it was correctly logged leave it as is.
You won't have a match on LOTW - but you´ll be happy.

I guess you won't accept the physical QSL card either. It has no
/VUXXXX either.

Your choice.

4109. DXCC Credits

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-07-29 01:51:55 UTC
From: ao.rangi
Topic: 4100 Message: 4109

I am wanting a list of all my awarded DXCC QSLs, both LoTW QSLs and card QSLs.

I sent a request to Bill Moore at ARRL and got the following reply:

'Since you had an LoTW element to your submission we do not include the credit matrix. You can now get this directly from LoTW:
Sign on
Click awards
Select your account
The first screen that appears are your totals Below this is a link to the credit matrix.
Open this and you can print it out.'

If I click 'Awards' then 'Select DXCC Award Account', I get the Account Status.
I am not sure what the credit matrix link is Bill refers to. (I don't see a 'Credit Matrix' link.)

I can get a list of LoTW credits but not card credits.

Any help would be appreciated.

Bryan, ZL1NI

Log in to LotW. Pick "Awards" from the top menu.
Select your DXCC account from the pulldown and click "Select DXCC Award
Account".
You should see an "Award Status" table with
award,selected,applied,awarded,total/current.
At the bottom of that table, there's a "View Award Credit Matrix" link.
Click on that, and you'll get a report of all of your DXCC credits.

>I can get a list of LoTW credits but not card credits.

ARRL doesn't keep separate LotW and card-based credit status; they're
all DXCC counters.

You can get your LOTW only entity credits by downloading all your
QSL's. Make sure you check the box for details.
(select a date range which encompasses the entire range of QSO'S). You
can find the download option under "your QSL'S"

Now import the downloaded ADIF file into your computer logging program
with a new logbook name.. Most computer logging programs will create
statistics of DXCC countries -- most likely all bands, individual bands
and band-modes. Save the logbook file

Repeat the download process periodically to update this "LOTW QSL"
logbook file

I don't know how to break out CARD only credits automatically. However
each submission you make claiming LOTW credits summarizes the LOTW
entities (band, mode included). Keeping a master list of these, one can
determine the card only credits by subtraction..

Excuse me, but this is hardly news. It was made very plain during the
DXpedition that the callsign of the station was VU7LD, not including the
operator callsigns. This from The Daily DX on December 5:

"All QSL cards for VU7LD go via W3HNK. All QSOs can be put on one QSL card.
There is no need to have the operator's home call (i.e. VU7LD/VU2PAI). If
you do include that info it may help, but is not required as
the callsign of the station is VU7LD. The /VU#??? is required by the Indian
authorities..."

Note "the callsign of the station is VU7LD." 'Nuff said.

Bryan,

Do you have a paper DXCC record at ARRL and has it been added to in the last few years? There will be no link to your award matrix if ARRL has not added it to their DB. Also have you MERGED your LoTW account to your DXCC record? Go to AWARDS, then SELECT DXCC AWARD ACCOUNT, then MODIFY ACCOUNT. Then read carefully the instruction box on the right.

Gerry,

I have had DXCC confirmed via cards from many years ago. However, I have NOT had the ARRL transfer these credits into the LoTW system (yet).

I cannot find the "VIEW AWARD CREDIT MATRIX" button? menu? whatever? you mention in your message below. Is it possible if there are no "cards" entered into the system, this option is not shown?

You can get your LOTW only entity credits by downloading all your
QSL's. Make sure you check the box for details.
(select a date range which encompasses the entire range of QSO'S). You
can find the download option under "your QSL'S"

Now import the downloaded ADIF file into your computer logging program
with a new logbook name.. Most computer logging programs will create
statistics of DXCC countries -- most likely all bands, individual bands
and band-modes. Save the logbook file

Repeat the download process periodically to update this "LOTW QSL"
logbook file

I don't know how to break out CARD only credits automatically. However each submission you make claiming LOTW credits summarizes the LOTW entities (band, mode included). Keeping a master list of these, one can determine the card only credits by subtraction..

From: Gerry
Topic: 4100 Message: 4118

Bob,

See my subsequent email on LINKING. I think once you do that, the VIEW AWARD..... will be available. It's actually the other way around in that the DXCC record is separate from LoTW but will contain LoTW credits only if you've applied for them.

Gerry,

I have had DXCC confirmed via cards from many years ago. However, I have NOT had the ARRL transfer these credits into the LoTW system (yet).

I cannot find the "VIEW AWARD CREDIT MATRIX" button? menu? whatever? you mention in your message below. Is it possible if there are no "cards" entered into the system, this option is not shown?

To print your paper card DXCC report simply select AWARDS and at the bottom of the LoTW QSL report, select VIEW AWARD CREDIT MATRIX and then select PRINT in your browser.

Subject: Re: [ARRL-LOTW] DXCC Credits

You can get your LOTW only entity credits by downloading all your
QSL's. Make sure you check the box for details.
(select a date range which encompasses the entire range of QSO'S). You
can find the download option under "your QSL'S"

Now import the downloaded ADIF file into your computer logging program
with a new logbook name.. Most computer logging programs will create
statistics of DXCC countries -- most likely all bands, individual bands
and band-modes. Save the logbook file

Repeat the download process periodically to update this "LOTW QSL"
logbook file

I don't know how to break out CARD only credits automatically. However
each submission you make claiming LOTW credits summarizes the LOTW
entities (band, mode included). Keeping a master list of these, one can
determine the card only credits by subtraction..

4119. Man these RTTYers are FAST! - Followup

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-07-30 00:22:04 UTC
From: Robert Chudek - K0RC
Topic: 4119 Message: 4119

Here's a follow-up regarding RTTY QSLing via LoTW.

You may recall I said I had better than a 25% return rate in less than 24 hours after the chads had settled in the chad box (old timer).

Last week I uploaded 423 NAQP QSOs and now I show 213 confirmations from the NAQP... so far!

That's a rate of return of 50.35% in about a week.

Thanks to everyone for the Q's and thanks for the QSL's!

4120. N8S via LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-07-30 00:39:17 UTC
From: cord72501
Topic: 4120 Message: 4120

I have asked the DXCC desk if they knew when N8S would upload their logs to LOTW. I figured that they would have done so already, seeing that they maintain an online log and it would be a not-so-difficult process to upload to LOTW compared to the time consuming task of filling out paper cards.

I also made that the comment that it should be ARRL policy that a dxpedition should upload their logs within say 45 to 60 days upon return.

DXCC replied that it is ARRL policy as such but they have one year to do so.

So that is the current status of N8S. I realize that a dxpedition needs some time to work on their logs upon return home but I wish the ARRL was a little more gung-ho to promote LOTW and shorten the deadline. I would like to see them also give incentives to the dxpeditions to upload to LOTW a short time after they return to encourage more use of LOTW.

They have nothing but a disincentive to use LotW. After upload no more contributions are coming their way.

Thanks Gerry.

My one and only application for credits was processed 15 May, 2007. Of 107 credits, 53 were LoTW QSLs and the rest were card QSLs.
I have gone through the Request Linking process so will see what happens in the next day or 2.

Dxing for umpteen years, challenge total over 2300

I NEVER NOTICED I DIDN'T HAVE HUNGARY CONFIRMED ON 30 METER CW.

I do now, HG46FC, worked last night and confirmed via LoTW today for both 30 meters cw and Challenge.

I even had to go to the 'file box' and pull HA cards to see if maybe I'd just forgotten to tick it off in the computer program.

Thanks to HG46FC for the qso, and LoTW qsl for 30 meters and Challenge credit.

my wife is right, I'm getting dumber each week!

Works fine on my Vista machine. Are you trying to load a "p12" or a
"tq6" certificate file?
I saved my certificate to a .p12 file on my Win2K machine and moved it
to my Vista machine.

Or what?

A dxpedition, just like anyone else, should be free to ignore LoTW.

Don't get me wrong..... I like using LoTW, but since when should a radio club like ARRL set policy for independent dxpeditions?

LoTW is nothing more (or less) than another way to exchange QSLs. Should printers of traditional paper QSLs set similar policies which would benefit their business?

Or what?

A dxpedition, just like anyone else, should be free to ignore LoTW.

Don't get me wrong..... I like using LoTW, but since when should a radio
club like ARRL set policy for independent dxpeditions?

LoTW is nothing more (or less) than another way to exchange QSLs. Should
printers of traditional paper QSLs set similar policies which would benefit
their business?

Hi Gerry,
They well might try to please the majority, which is proper. It is also very possible that in 49 years of membership, I have not usually been in the majority.
Sometimes, that is where I feel I fit in a lot of things. ;<)

Hans,
I agree with what you say (sort of). However ARRL are the ones that own DXCC
and can make whatever rules they want. It is not some sort of UN program :,)

Works for me!

Since I'm a member, I move that DXpeditions are free to participate (or not) in LoTW based on their own desires, and DXCC approval will not be based on whether they participate (or not).

All in favor, please say "Aye".

I'd like to believe that too - that the ARRL makes the rules
members want - but I don't ..... I'd leave it at "they make
the rules".
Membership services / DX desk wouldn't give HK1/K8DD an
LOTW certificate, but the Contest desk did count our score for
ARRL DX CW.
Go figure!

I vote "nay" - Any DXpedition seeking accreditation by the DXCC
desk should submit proof that they have obtained a LotW certificate
and uploaded their logs or will do so within 60 days following the
end of the operation.

That is one of my personal criteria for supporting an operation.

The ARRL contest desk should also require that contest logs be signed
and uploaded to LotW.

I am also a member and my vote is:
ARRL can require a dxpedition to upload their logs WHEN the ARRL PAYS for the dxpedition. The people who put on the dxpedition put in much time, effort and money to give us new countries. We should not put up barriers that could limit their support or efforts.

Joe,

My "personal criteria" is "to each his own". I like LoTW, I love paper cards, and I can tolerate eQSL, but I don't like any of those if ARRL (or whoever) makes them "mandatory". On the exact date that "my way or the highway" attitude happens, my support disappears.

No, the ARRL already pays for costs involved with both LotW
and administering the DXCC program. Both of which are in
excess of the fees charged for those services.

> The people who put on the dxpedition put in much time,
> effort and money to give us new countries. We should not put

If the expedition organizers would do their fundraising properly
in the "front end," picking up crumbs on the QSL end would not
be an issue. I can't see where the QSL process really generates
substantial incremental revenue when domestic requests come in
with only an SASE and foreign requests come in with a GS or IRC
for a $0.90 stamp plus card.

I think it would be instructive to see a critical analysis of
the net benefit - after cost of printing, cost of supplies,
cost of postage, and value of [volunteer] labor - from QSLing
for some of the large expeditions.

> for some of the large expeditions.

I can't speak for the large expeditions, but after two (or more)
trips of 6-10K QSOs each and about 1500 QSLs each the GS and
IRCs gleaned from the envelopes pay for the postage and maybe
a set of print cartridges. That's about it!
Not the cards or the outgoing bureaus.
And I can't speak for the large expeditions, but I know I'm not going
make a buck going .... or even break even.
That's not why we go.
It's fun.
It's a rush to sit in front of the radio on the "other side".
And some guy who got a QSL for a new one bought me a beer
at Dayton!
That's why we go.

Hans,
I enjoyed your web site. I spent 5 years in the brown shoe navy. Always wanted to be a man of the sea, but airplanes kept getting in the way. Now it is too long a walk from Colorado.
On the current subject, I see no logic in requiring a DXpedition to participate without requiring every ham in the world to participate if they want to be valid for DXCC. But as in so many things bureaucratic, no one said logic was involved.

Joe,

I can tell you that the donations received from QSL cards, from a major dxpedition, is usually somewhere in the range of matching the large organizational donors. Read, it's significant, and without it, many dxpeditions would be even further in the red.. Its a SIGNIFICANT source of fund raising.

I can go into this in more detail when I have time; in fact, I'm toying with putting this all in perspective after i get a chance to see how our BS7H LOTW experiment turns out

If the expedition organizers would do their fundraising properly
in the "front end," picking up crumbs on the QSL end would not
be an issue. I can't see where the QSL process really generates
substantial incremental revenue when domestic requests come in
with only an SASE and foreign requests come in with a GS or IRC
for a $0.90 stamp plus card.

I think it would be instructive to see a critical analysis of
the net benefit - after cost of printing, cost of supplies,
cost of postage, and value of [volunteer] labor - from QSLing
for some of the large expeditions.

I received mine also. The one thing that I like about LOTW is that it has renewed my interest in confirmations. I enjoy computers almost as much as radios, so this is all fun for me. A long time ago, at least 20 years, I gave up chasing QSLs, it just wasn't worth the trouble to me. I know who I worked and that is good enough for me. If anyone sends me a QSL direct, they will get one in return within 2 to 3 days along with whatever IRC, SASE or whatever they sent to me sent back to them. However I upload everything to LOTW and EQSL. Most mornings, I check LOTW and it is almost like going to the mail box every day when I was a 14 Year old novice. I know I have worked a lot of countries I will never see a QSL from unless I work other stations there, but it is still fun to see what is in my LOTW mailbox each day.

Works fine on my Vista machine. Are you trying to load a "p12" or a
"tq6" certificate file?
I saved my certificate to a .p12 file on my Win2K machine and moved it
to my Vista machine.

Glad you like my web site. I was black shoe, retired as a Master Chief Radioman, and always felt I was being paid for my "hobby".

I have a grand-daughter in the Navy now, a Cryptologist stationed with the Air Force spooks in Aurora, Colorado. Visited her back in March --- sure wish I had their antenna farm!

> On the current subject, I see no logic in requiring a DXpedition
> to participate without requiring every ham in the world to
> participate if they want to be valid for DXCC.

Exactly! A station is a station is a station is a station and a contact is a contact is a contact and they all count for precisely one country..... er, "entity"...., or another. If you require N8S or VK0IR or BS7H to submit a log within 60 days of a QSO to count for DXCC, then K0HB or W4TV or JA1ABC must also submit within 60 days of a contact or it contact doesn't count for DXCC. Sunnuvagun!

4151. Software bug in LoTW?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-08-04 12:27:53 UTC
From: rchalmas
Topic: 4151 Message: 4151

In the past days, I had 2 similar problems where the LoTW software seems to have "missed" matching QSO's when parsing uploaded logs:

- I worked A25KDJ 4 times between July 13th and 18th and uploaded my log on July 19th. The operator W5KDJ uploaded his log a few days later and I got 3 QSO's confirmed on LoTW, althougt the 4th QSO was also OK in the expedition's online log. I uploaded my 4th QSO again with no effect. Then I emailed W5KDJ and he entered *again* this QSO. This time, the missing confirmation showed up!

- After the logs for VU7LD were uploaded to LoTW, I entered my 6 QSO's again (as I had uploaded them first with the /VU2xxx suffix). All 6 QSO's showed up immediately as confirmed. When I checked again the next day, I was very surprised to see that only 4 QSO's were still confirmed! I had to enter the 2 other QSO's again and the credits appeared again and, till now, remained!

I never noticed this kind of problems before, so I wonder if there could be a bug in a new version of the ARRL's software parsing the logs for matching records.

Did anybody experience similar problems?

A couple of days ago, I was surprised to find a 3Y0X qso for 30 meter cw as being credited for 30 meters and Challenge
Today, that qso/qsl is still there, but no longer showing that it's available for credit on 30 meters and challenge.

Apparently I did indeed forget to ask for credit when I submitted the card (there were multiple qso credit on 2 cards)
But I most certainly already had a 30 meter rtty qsl from a previous dxpedition as being credited for band and Challenge

Very Strange, some sort of hiccup in the system

Check your "time". LoTW requires the time to be correct within a 30 minute window.

maybe I didn't make myself clear
I HAVE the LoTW qsl
It's correct.
But the credit for 30 meters and challenge are no longer available
When it was first seen as a qsl, it indicated that I could apply that qsl
for 30 meter cw and for 30 meter Challenge credit

Now it still shows the qsl, but no longer has any entry in the 'DXCC' field.

Well, the QSO data I sent for the 2 disappeared confirmations with VU7LD were exactly the same as the original ones. I extracted the 2 lines from the original ADIF file, copy/pasted it into a new file, signed it and sent it. AND don't forget that those 2 contacts were initialy confirmed, so the time was obviously OK.

For A25KDJ it's more difficult to be sure if W5KDJ uploaded exactly the same data. First, I also thought it was a time problem so I uploaded twice the contact with the time shifted by -1 hour and +1 hour. No result. I'm sure it's not possible the time error, if any, was greater then 1 hour. So at my opinion it's not very likely to be a time problem...

These types of issues *could* happen if a restore was applied to the LoTW server for some technical reason. BUT, if that were the case, I would expect an announcement to be posted by the ARRL. I'm not saying this is what happened, but it is one possible explanation for mysterious changes from a users perspective.

Last week I checked for new QSL's and was surprised when my total went down by one. A few days later the same thing happened again. Those two QLS's are apparently still missing or at least not reflected in the total number. It would take a bit of effort to find out which QSL's they actuslly were but they don't appear to be recent ones.

If you already have another contact credit for that entity, that
band, that mode, then the checkbox to selection will no longer appear.

you obviously missed part of the thread
First thing in the morning
There was a DXCC credit for 30 cw and challenge
a couple hours later the credit disappeared.

I'M NOT TALKING ABOUT THE QSL!
I'm talking about the entry in the DXCC field!
First thing in the morning....the DXCC field said that I would have a DXCC
and Challenge credit
a couple of hours later....the DXCC field was blank.

Once you have checked the box (and saved) for the new QSL in the Awards/Application page, the DXCC message is removed from the Your QSOs list. Uncheck the box (and save) and it will reappear as if by magic.

K0HB directed this thread way off course from my original post.

First of all, I did not say that ALL dxpeditions should be forced to upload their logs to LOTW.

It is ARRL policy that any dxpedition that receives a Colvin grant or other ARRL financial backing is required, within one year, to upload their logs to LOTW.

My personal opinion is that is should be required within a few months upon return. If you were to wait a year, it might become one of those things that become "forgotten".

LoTW has a long memory, and won't forget to give you the credit
after a year if you've uploaded the correct information for the match.

If you need it sooner, send direct.

>ke4kwe@...

You'll need to explain more clearly what you did for someone to help you.

If you saved a copy of your certificate prior to the crash (you have a KE4KWE.p12), just import that into TQSLCert using "File/Load Certificate File".

If you don't have a saved copy and needed to generate a new certificate, you would have used TQSLCert on some computer and generated a new certificate request using "File/New Certificate Request". You send that to ARRL, who signs it and returns their half of the certificate. You've got to load that new certificate file on the *same machine* used to generate the certificate request. You can't import the new signed public key on any other system. After you import the signed public key, you can export the key pair as a .p12 file and move it to other computers.

Reading between the lines, you didn't back up your certificate and lost it when the system crashed. You tried logging in to LotW and downloaded your certificates from there. That won't work because the only thing that ARRL stores on LotW is the signed public key; the corresponding private key is ONLY stored on computers you control. If you don't have the corresponding private key, TQSLCert won't be able to use the public key. If that's what you're trying to do, you'll have to start over. Contact lotw-help@... and they'll tell you how to get a new certificate.

A note to everybody: if you haven't saved your certificates on some offline media (floppy, thumb drive, etc..) do it now. Immediately. It's just as important as keeping a backup of your log. Much more important, in fact, as you can probably recover your log from LotW in the event of a hard drive crash.

73,
-Rick

K8AV thats not what I said. Yes, I know all QSOs logged into LOTW are permanent. Don't you think the chances are greater that if a dxpedition waits a year to upload their logs that possibly the logkeeper will forget to do so?

I really rather not waste the time and postage to get a card direct from a dxpedition when I know eventually I should get a QSL via LOTW from them.

Again, my argument is there is no sense in waiting a long period of time to QSL via LOTW. It only takes a few minutes and a few keystrokes vs. weeks of filling out paper cards.

As been said by me and others before. If there was a way to support DXpeditions though LoTW "contributions", they may be encouraged to upload their logs sooner. Rather that enriching the post offices though direct cards many would be happy to put those $$ towards supporting DXpeditions.

As Steven KU9C made clear, 50% of support for DXpeditions comes in the cards. They simply can't afford to give up that revenue. Less revenue potential means fewer/smaller operations and I don't think that's what the DX community wants to see.

Maybe suggesting that DXCC legislate LoTW use, they could explore ways of helping DXpeditions financially though LoTW use. I could see something like a PayPal contribution option when one submits LoTW QSOs.

I've contributed to dxpeditions prior to their start via credit card, paypal
and checks.
I can't help but feel that the pre-start contributions would increase if
they promised to upload to LoTW.

I'm not saying anything about mandatory.
I'm saying that a 'feel' for the amount of contribuitions there will be
would be very comforting to the dxpeditioners.

Plus, paypal/credit cards contribuitions make it easy to refund in case the
dxpediton was cancelled and could not be rescheduled.

The NAQP (North America QSO Party) is a very productive contest to fill in needed states. The SSB contest is coming up in a couple weeks. Unfortunately, the RTTY and CW events ran within the last few weeks.

BTW, I worked every one of those states during NAQP-CW yesterday. That's easy from here, but still NAQP provides an opportunity from RN6-land as well.

I also noticed thie behavior several times in the last 18 months. I had them confirmed, then they just disappeared, then I uploaded again and they were reconfirmed again.

Al;so, have seen other QSO's which I expected to be confirmed (5 od the 6 from S9SS were confirmed in LoTW, the sixth was not). So I re-uploaded that 6th QSO and BAM confirmed. It was NOT me.

I also had some problems with my VP6DI QSL in LoTW, first confirmed then NOT confirmed.

I emailed the LoTW desk, and there was a bug that had to be fixed. See the emal response below. My point is that I don't want to shed doubt on the validity of LoTW, but I do want to highlight that it is not our imagination.

Thanks, Kathy.

I tried the upload, it still shows as just a QSO.

The TQ8 file and ADIF are attached.

Let me know what else I can do to help with troubleshooting. Thanks.

PS It IS a valid QSO, I have the in-hand card to confirm.

Hi Mark,

Sorry for the delay in answering your message.

I have a feeling that your question relates to an existing problem with

LoTW lately. Can you do me a favor? Can you please upload the one

Ducie QSO again and see what happens? Please let me know if it shows up
as a QSL or still sits as a QSO.

For some reason your QSO does not list Ducie in the QSL data while
VP6DI's QSO with you doesn't list your State. Yet the Award Matrix shows
a "confirmation". It shows that VP6DI was selected.

The programmer is aware of a problem and any extra information we can
give him would be helpful.

We apologize for the inconvenience.

Thank you for your participation and assistance.

73,

Kathy Allison KA1RWY

so how to cure this??

shall we all upload our complete logs regularly just to avoid
losing some confirmations..

sure a bad idea. anyone having a better?

I don't know about re-uploading. I did that today, only 1400 records
uploaded, so not a big hit on the server, and my QSL record count went
down by 25!!

I did this upload because I lost 2 QSL records a few weeks ago. I
thought the new upload would fix it. Just made it worse.

I have had the same QSL disappear and reappear twice now on LOTW. I did not re-upload or anything else except bring the problem to the attention of the LOTW folks.

Since then I have gotten in the habit of noting the QSL total before and after uploading.

Another one has disappeared and I have not yet taken the time to try and figure out which one it was. It may even have reappeared already disguised as a new one. I would need to go through my entire DXKeeper log which (separately records LOTW confirmations and their dates) and compare it to the LOTW record to tell for sure.

I think perhaps a little bit more time needs to be spent on database integrity...

I have a number of credits which have disappeared. Tracking them down:
OE3SGU '98
K4SV '03
LA6FJA '04
KA1LMR '06
WC4J '06
CT5A '06
W7FG '06
S50R '07

Looking up on LOTW indicates these calls are indeed in the system, QSO's were uploaded and most have confirmed QSO's for other dates. Presto chango. Fortunately, no band-countries have been deleted.

Gerry,

Over the years I periodically downloaded LOTW QSL's into its own logbook file. It now shows more QSL's than LOTW does. This is a relatively recent occurance. Up to sometime last year, the two always agreed.

I recently downloaded a consistent file from LOTW which contained all QSL's.

Manually comparing the two logbook files (via ASCII tabular exports of each) showed the differences. I used a side by side word processor pair of windows for comparisons. I'm sure somebody else could have written a program to do it.

Now for a question. Is it a LOTW bug? Or is it the result of some users re-uploading their files with some sort of mistake in their mode, band or whatever-- perhaps introduced by the software they are using.

This discussion of a possible bug is really interesting but are the LoTW folks in on it? Is this list monitored by them? This is certainly something they need to know about.

Thanks for the explanation Brian.

Folks like you that have some historical data can find these discrepancies. The rest of us can only hope all is well.

I trust the LoTW folks will investigate and find the problem and hopefully the data can be recovered and restored.

Subject: Re: [ARRL-LOTW] Re: Software bug in LoTW?

Gerry,

Over the years I periodically downloaded LOTW QSL's into its own logbook file. It now shows more QSL's than LOTW does. This is a relatively recent occurance. Up to sometime last year, the two always agreed.

I recently downloaded a consistent file from LOTW which contained all QSL's.

Manually comparing the two logbook files (via ASCII tabular exports of each) showed the differences. I used a side by side word processor pair of windows for comparisons. I'm sure somebody else could have written a program to do it.

Now for a question. Is it a LOTW bug? Or is it the result of some users re-uploading their files with some sort of mistake in their mode, band or whatever-- perhaps introduced by the software they are using.

No. The only way to obtain confirmation of a QSO via LotW is for both you and your QSO partner to independently email or upload a correctly formatted and encrypted description of the QSO to LotW, and for those descriptions to match.

Roberts LoTW site.
http://www.hb9bza.net/lotw/#howtohelp

Interesting info about the growth rate of LoTW.
the chart shows approx. 300 new users a month.

I'm curious, as to how many VE7CC node software users are watching for LoTW
users indicated in Cluster Spots?

Good hunting!

On your new PC, did you import your saved certificate? You should have a .p12 file saved from your old PC; importing that on your new PC is necessary to get your private key restored.

If you didn't do that, you must start over. If you know your postcard password, lotw-help@... can help you recover with a new cert.

>I now have close to 150 contacts to be logged and I can not connect to
>LoTW because I do not have a signed cert. All I get is a circle with a

That probably means you don't have a valid private key for the certificate you're trying to use. Restore it from your backup .p12 file. If you don't have a backup, contact lotw-help.

Again, for emphasis: your certificate, which you can download from the LotW site, has a corresponding private key. That private key is ONLY stored on your PC. If you don't back it up elsewhere, it CAN NOT BE RECOVERED. Mine is stored on a floppy in my desk drawer, on two separate PCs, and on a USB thumb drive. Note that my last name is Murphy, so I'm pretty careful about such things. :-)

The K3UK interactive sked page for Worked All States/Provinces and US Counties is back on line after a couple of days with server problems.

Check http://www.obriensweb.com/wac/wac.php

This page allows radio amateurs to coordinate skeds and / or solicit others as your work towards those needed states, provinces or counties. Those who are LOTW active are displayed ,so users needing a quick confirmation can recognize the LOTW active hams currently on line and arrange a contact.

When you check in to the page you will be able to use your mouse to "mouse over" or hover over a callsign and see their State and County displayed as well as the distance and bearing from your location. The distance and bearing calculation can only be achieved if you provide your SIX digit grid square in your "cookie" .

Hello Mark,

I apologize for the delay in answering your message.

Thanks for notifying us about the QSO-matching problem that occasionally has been appearing in LoTW.

We are aware of the problem, and are working hard on the solution.

It is possible one side and/or both sides of a QSL uploaded their log again with the same QSO. It appears that sometimes this is changing a QSL.

It would be appreciated if you please do not resubmit a log that is

already in the system. The data is still safe in LoTW.

We will place announcements on the LoTW home page as well as on the ARRL home page when the problem has been fixed.

Subject: Wd4elg - Question

I had 380 confirmed on 9/1.

I check today, and I see 381 confirmed, but there are TWO new QSL's

received: GW6GW and J39GS. Can you explain? Is this LoTW "new math"

:) My electronic log matched with LoTW on 9/1. Now it shows 382
confirmed (as it should), but LoTW is 381 confirmed?

THanks

Mark Lunday

There is a rumor, (unconfirmed) that Buddee will provide one Canadian Style
Beer for each LoTW qsl you receive from him.
Of course you must go to his BC qth to recive the prize.

:-(((I only have 20 some LoTW qsls. But I'm enroute!!!

4214. Dump credits matrix to file?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-10-05 13:34:29 UTC
From: Brian A
Topic: 4214 Message: 4214

It would be nice to dump the "DXCC Award Credits Report" to an ASCII file or a file compatable with MS Word or other word processors.

For people like me who don't keep good records of what the ARRL says I have confirmed (Cards + LOTW), it would be nice to have on the computer.

One can use "select" to capture everything, the result is not a carbon copy of the table. Instead one gets only the characters. The alignment is screwed up by the tabs used. Long or short country names shift the "X's" to completely mess things up.

Yes one can print it OK but I want something on the computer.

Brian,

You are using the wrong tool to accomplish your goal.

You can highlight the table you want on the ARRL page, use the Windows copy command (Ctrl+C), then open Excel, and use the Windows paste command (Ctrl+V). Using Excel you can manipulate the information however you like.

I usually use N1MM. I sent EMAIL requests to those listed that LoTWContest be supported and that I would be available to test the software, but never got a response back. I assume that since this is a first year contest that who ever makes the decision decided that, at this point, it would be a low payoff for their developmental time. I just check the web page and it shows 2924 accesses, so I think there will be a fair amount of activity.

I have confirmed that the N1MM CQ160 SSB and CW selections will work and allow you to use any band. I will makeup a separate 160M contest formatted log for each band I operate and submit the separate logs to LoTW. When it comes time to send in the contest submittal (30 days after the contest), I'll just down load the lotwreport.adi file which will have all the bands in it.

You will have to manually sum up the multipliers and points for each file to arrive at an estimate of your score, but better is to forget the score while operating and concentrate on working band multipliers and stations that are LoTW members, since the score will be automatically calculated when we check logs and it will only be based on the contents of the lotwreport.adi file generated after the 30 day wait period to make sure all those that will enter have uploaded their logs to LoTW. For those non-members, remember that you still have a chance to join even after the contest is over.

Additional details concerning entries/log files received and preliminary scores, and lists of countries participating and callsigns will be available on the http://www.lotwreport.com website starting 31 days after the contest.

See you in the contests,

Bill, N5RR

Brian,

When you are viewing the ARRL Award Credit Matrix in your
Internet browser, go to the "File" menu of your browser and click on
"Save Page As. . . " (in Mozilla Firefox) or "Save As. . ." (in
Internet Explorer.)

That will save the entire web page including the data. Then, you
can call it up on your computer by just clicking on the saved page and
have the scrollable credit report in front of you any time you want
without needing to log in to LoTW. It will look exactly the same as
it does when you are logged in. Save a new page as often as your
records change.

Thanks Bob,

This works. A bit of reformatting gives me a useable file. Was able to
dump to ASCII file, I can use..

The reason for needing an ASCII file is to further process it to do some
automated comparisons with other data files..

Not an EXCEL fan In fact, computer didn't even have it. Found a
pretty old version in WP suite of programs disk.

Hi Clark,
Thanks reply.
This does what you said. However, I really wasn't interested in a
scroll window solution. Window is far to small
I wanted to see screen size chunks of the table and then have something
I could minipulate as a file..

Yeah, 6 years ago I didn't even know how to spell Excel, let alone use it. But my boss at the time was a Project Manager and those folks live with this tool. I used to call him "Mr. Spreadsheet"... well, I gradually started using it and now find it very valuable to do logbook analysis and many other tasks. I've morphed into my old boss!

No, it is the CQ 160, since it matches the WAE and DXCC combination, like IT9, etc. It also counts District of Columbia (DC) as a multiplier.

Complete rules are at http://www.lotwcontest.com . See you in the contest.

Now only the following 28 countries (according to the HB9BZA site) are
needed for a LOTW clean sweep.

3C0, 3D2C Conway, 3Y5 Bouvet, 4U1U United Nations NY, 7O, 8R, 9J, 9U
EK, EP, EZ, FR/G, HK0M, JD1M, KH5K Kingman, KH8S Swains Island
KP1, KP5, PY0P St. Peter & St. Paul Rocks, R1F, ST Sudan, SV/A
VK0M, VK9M, VK9W, XW, ZK3, ZL8

Any guesses for a clean sweep date?

Up until yesterday I had not experienced the random dropping of QSL's in the LoTW system. But I hit the jackpot last night!

Thursday my LoTW standing was 53,240 QSO's and 13,814 QSL's

I made 4 separate uploads last night. I dropped 1 QSL after 3 of the 4 uploads.

This morning my LoTW standing was 53,276 QSO's and 13,811 QSL's. At this point I don't know which 3 confirmations were removed.

I track my progress in an Excel spreadsheet so I have got solid facts I can forward to the LoTW programming team. Maybe this will help them determine what the trigger mechanism is for this behavior.

In another instance (this might be related), I have a QSO logged with a DX station on 17m SSB. We exchanged eQSL's without any issue on that system. But I received an email message from him asking me to put that contact on LoTW too. Well, I always do.

When I checked LoTW, I did have the contact uploaded properly so I sent a message back. He confirmed he has his information uploaded properly too. We exchanged and compared records but cannot figure a reason why this QSO is not confirmed!

I don't know whether this is related to dropping QSL's, but this contact WAS contained within one of the uploads I did last night.

Stand by for news!

Hi Bob,

This is an old, "known" problem. LOTW isn't counting properly.

Speculation: Some guys confuse the system by constantly uploading old
QSO's again and again--- like they make 10 more contacts and upload all
previous ones plus the new 10.

I reported this to the ARRL and they assured me that the contacts are
still there.
They said they were working on it.

I'm up to 26 more QSO's than LOTW indicates. My DXCC totals have always
been correct.

Topic: 4236 Message: 4236

I worked xx9xx/6, during a contest.
I uploaded the log to LoTW and never saw a qsl fro xx9xx/6

But I did see that xx9xx had qsled a contact via LoTW for a non-contest qso.

so I ran a test and sure enough, xx9xx for the as yet unconfirmed qso did match what should have been xx9xx/6

I also spotted that a dx country that allowed a special prefix yy99yy did not qsl via lotw, but when I used the normal prefix for that country my test did show up as a LoTW qsl.

So basically, what this means is that many people do not realize they must obtain a certificate for any call sign variation of their basic call xx9xx is NOT the same as xx9xx/6
With the more frequent SE calls on the air, it's pertinent to remind them that these LOTW qsos will not provide a match.

so the LoTW miesters either need to remind people of this fact or code for situations where a match occurs for a callsign variation which is as yet uncertificated. (is that a word?)
Or at least when such a callsign variation occurs, LoTW should notify the station that his log, was incorrectly uploaded due to the variation.
I would have thought that it would not be difficult for the LoTW system to recognize that a callsign and it's logs were not matching anything due to the /6 or difference in the SE call and inform the submitter of his need to apply for a certificate and reupload.

Because so many contests require out of district stations to append the /# to their calls, I bet I'm missing a lot of qsls due to this situation.

Whenever a system becomes completely defined, some damn fool discovers something which either abolishes the system or expands it beyond recognition.

Hi Bill, etal:

I agree with you completely regarding the xx9xx
and /6. I can confirm that also as I kept wondering
why everyone was getting their 4O5A LoTW cfms
so fast, and I had zilch!! Then I 'hit my reset' and
realized that I did not submit my log also as
W7LPF. Primarily for RTTY contests I use /3 -
and sometimes on CW - when I do, I upload the
contest files to LoTW twice - as W7LPF &
W7LPF/3. [Catches some everytime!!]. BTW,
my 4O5A contact was there. I remembered that
the operator replied without the /3 although I
repeated it, but as you know in a contest, you
do not want to spend time trying to confirm
something like that. Sometimes I can have as
many as 20 additions for the call structure that
I did not employ for that contest [used W3LPF,
and get additions when submitting the /3].
73,
Joe W7LPF [OR /3]

BTW - I know I will have to probably put on a
flame resistant suit for my next statement - but:
The should require anyone outside their 'call
designated area' indicate that fact with their
call - like the old daz!!

Fellow LoTWers,

I was having difficulty getting a confirmation for a QSO that appeared "just fine" on both sides. Looking at the LoTW record printouts from my end and the DX end didn't reveal any problem. But still, no confirmation!

What I discovered within my original ADIF file is an "Operator" field. Normally this is coded <Operator:4> KØRC. But in this particular ADIF file, I found two instances of <Operator:3> KØD.

This wasn't a huge surprise because I used this Special Event callsign last month. Exactly how I got this entry into my daily log is anyone's guess. But that's really not the point of my discovery.

What I'm struggling to figure out is why the LoTW system would withhold a confirmation because the Operator callsign was different from the Station and Certificate callsign (which do match). I think this would add an unreasonable level of complexity for a Special Event or Contesting station where multiple operators generate a log.

For example, let's say you run the Station callsign WØAA with 4 different operators during a contest. If you have a LoTW certificate for WØAA and upload this log, what difference does the Operator callsign make? In this scenario, none of the WØAA contacts would generate a confirmation.

I suspect the easy answer is to remove the <Operator:#> tag before processing the adif file.

But help me understand the logic for this processing behavior! Are the LoTW confirmations Station callsign or Operator callsign based?

I sure can't help you.
I don't have any idea why station OP would block a LoTW match if the
Callsign used for the contact had a proper certificate.
Think this is a question for the LoTW specialist...

Something to think about. LoTW produces QSLs for awards and those awards are personal (tied to a single operator per DXCC rules). Maybe the operator is tracked if that field is filled in. That brings up the question, if the operator were also a LoTW member, should the QSL show up as a QSL under his account? I'm guessing it won't, but there could be a good argument that it should. Another situation, when I work at a contest location with that station's callsign and the owner of that callsign is also an LoTW member, those QSOs that I personally made were based on my skill (or luck). As long as the location is within the allowed radius for my WAS or within the country for my DXCC, shouldn't they be counted for my awards?
Even if the argument is valid, I won't hold my breath to ever see that implemented.

Hi all,

Perhaps I mis-read it somewhere, but wasn't the TA contest 160m only???

Also, re the Makrothen contest being on at the same time as the LoTW contest:
I shall operate the Makrothen contest, and will expect the exchange for that contest.

It is naive of those who thought up the LoTW contest to place it on the same weekend as a well established contest and then expect participation, especially from regular RTTY ops.
I guess newcomers to the mode (especially some of those that took part in CQWW, maybe for the first time) will get rather confused by it all!

I don't know the figures, but I wonder what percentage of all LoTW users are RTTY ops?
And how many of those RTTY ops would miss out on the Makrothen??

Also, given the fact that when the first LoTW contest was announced, they made it clear RTTY wasn't included, and then to come up with an already-used date seems rather daft.

As Shelby said, perhaps the LoTW contest organisers could use the same exchange as the Makrothen?

See you all in the Makrothen!

Thought I would clear up a few things.

1. There really is no conflict with the Makrothen contest because if one wanted to enter both contests or be compatible with both, just add the state/country to the report for the Makrothen and you can easily count those QSOs for LotW. If you remember, a signal report is not required in the uploaded log for LotW to obtain a LoTW QSL, and if the signal report is uploaded, it is discarded in the QSO record. I venture to say that the LoTW contest is the most compatible contest around, simply because there is no conflict with the report.

2. As for being naive on the date, I asked for dates, looked for dates, and didn't receeive any suggestions. Your comment could apply to any weekend date in the year. Just look at WA7BNM's calander and try to find one yourself that wouldn't conflict with something.

3. Your question on RTTY ops as a percentage of LoTW should be reversed, "What percentage of RTTY ops are also LoTW members?" If you want an indication of the large number of RTTY ops that use LoTW, during the contest, just check your favorite spotting net for the "+", indicating a LoTW member. From what I have seen, it is a larger percentage, compared to the other modes. My RTTY LoTW QSLs vs. RTTY QSOs is running slightly over 31% while the other modes run about 17%, with logs dating back to about 1968.

4. You are correct, at first RTTY wasn't included, but with a couple dozen EMAILs indicating that it was wanted, and the offer of a RTTY/DATA plaque, I changed my mind and added it in the same date/time slot as the CW portion, for lack of another date.

In any case, good luck in the contest whether you enter either or both.

Bill, N5RR
LoTW Contest organizer.

Hello Rick,

I'm splitting this apart, into smaller chunks...

I said: I suspect the easy answer is to remove the <Operator:#> tag before processing the adif file.
You asked: "Have you actually tried that?"
I say: No, I haven't removed the Operator tag from any files.

You said: "It seems rather unlikely, especially given the fact that there is a known bug with LotW losing QSO matches, which seems to be seen when folks re-upload their entire log. For some reason this causes matches to disappear."
I ask: Has anyone identified a specific QSO match that has actually disappeared? Or could this be the "QSL counter" just gets screwed up and doesn't count correctly when a log is uploaded with a substantial number of dupes?

You said: "Of course, I'm assuming you're not using callsign KØRC anywhere in LotW, since that's not going to match K0RC."
I say: Correct. I don't use the slashed zero anywhere except in email messages to distinguish the number. What were they thinking when they created a 10th callsign district anyway? :-)

You said: "Contact lotw-help with the QSO particulars. They may be able to use your case in figuring out the bug. All we here on the list can do is to speculate."
I say: Yes, that's my next step. I am composing a message today. I was casting my questions here first in case someone else has already experienced this scenario. I haven't participated in LoTW from its inception.

You said: "-Rick"
I say: Thanks Rick!

Bob,

The LOTW problem is definitely NOT just a QSL counter problem.

I have had the exact same QSL, a 17M SSB QSO with EC8AFM, disappear four times now. It reappeared three times but is now missing again.

Jamie,

<humor?=on>
In a Lily Tomlin switchboard operator voice and delivery
http://www.lilytomlin.com/charns/ernestine/quotes.htm "A gracious hello and a big LoTW QSL to you, Jamie!... well, maybe... maybe not... snort, snort..."
<humor?=off>

I would think the LoTW programmer would have a pretty good starting point with your EC8AFM qsl record. I did not try to find which confirmation was taken away in my records. With over 13,000 confirmations in my log, I'll need to figure out an efficient method to compare a "before" and "after" to see if I can identify my MIA's.

Thanks for the info.

Bob,

The LOTW problem is definitely NOT just a QSL counter problem.

I have had the exact same QSL, a 17M SSB QSO with EC8AFM, disappear four times now. It reappeared three times but is now missing again.

Hi Terry,

Well my second cup of coffee hasn't kicked in yet, so I'm scratching my head what tool I would use to make this "comparison"? If I print these 13,000 records with 100 per page... I've got a lot of pages to compare. I hope there's a computer assisted method of doing this!

Good Morning Bob!

No, no....definitely don't try it manually. You'd need WAY MORE than
two cups of coffee for that :-)

There are many free programs for comparing text programs.

Bob,

There is a program I like for comparing files, "ExamDiff".
You can find it at:

http://www.prestosoft.com/edp_examdiff.asp

It is real simple to use and it will handle very large files and
show you what is changed in a file and what has been added to either
file. It is free.

Bill, N5RR

From: timgep
Topic: 4256 Message: 4256

Recently, we just made it over the 14 percent threshold.
I think the CQWW RTTY contest pushed it over, and VA7ST's
big upload helped too.

We are nearing 20 million QSL's confirmed!

Congrats to all! On to 15 percent!

Tim K6GEP

4257. Notice on LoTW home page

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-10-12 17:00:58 UTC
From: FireBrick
Topic: 4257 Message: 4257

Apparently the recent discussions about people uploading contest/Special Call/SpecialEvent logs using their certificate/home call has alerted both the users and LoTW.

There is a new message reminding people that if they operate using a /portable or some other call then the call the certificate is for, it will not result in LoTW qsl matches.

A explanation of how easily it is to acquire an additional certificate for this 'variation' call by applying through their existing certificate.

w9ol
w9ol/9
w9ol/5

all require individual certificates and the logs for each of these operations require being signed/uploaded with the corresponding certificate.

Once you get your original certificate, you use that to prove/apply for additional callsign certificates.
These 'additional' certificates are issued almost immediately and can be downloaded on the LoTW site.

You need a Lifestyle change if: Your working TV sits on top of your non-working TV.

You have to apply for a certificate, it's no way connected to any contest log submission if that's what you meant by their accepting it.
You have to apply for each and every variation or new call your allowed to use.
How do they know that w9ol and my by1kk call are the same me? Until I tell them.
You apply using your base call, and then you get a reply, and can download it from the LoTW site.

I

did you download it? If not, it's still sitting there waiting for you.
If they didn't process it, an email to Dave Patton or the LoTW specialist
(I forget her name/call) but it's in QST

If you get it, you can still re-upload.

LoTW users...

It is Kathy Allison - KA1RWY who is first in line on the LoTW Help Desk. I have always received a prompt reply to my email queries. I define "prompt" as "within a day or two, sometimes sooner".

Earlier this week I had a technical question that was beyond her knowledge. She sent a message back saying she would forward my question to the programmer. I got the answer back from the programmer "promptly".

My question was whether the ADIF <operator:#> tags within my contest files were processed by the LoTW software or ignored. The answer I received is "This tag is ignored". There are real people on the other end of the lotw-help@... I think they're doing a good job. But If you're having a problem, the LoTW Help Desk can't help you if you don't ask!

Prasad, in your case I would want to know why there was no certificate issued for your W6/VU2PTT. Maybe there are different rules for obtaining a new certificate for non-US licenses? I wouldn't expect so, but you never know unless you ask. And Hank, same deal with your request for the HK1/K8DD certificate.

Maybe there's a bug in the system? There must be something "going on" if people are sending requests for certificates and they are not receiving a response.

I'm CC:ing Kathy on this message and let's see what she says about this. Within the last 8 months I have requested and received two certificates spawned from my original certificate.

From: Mark Blanton
Topic: 4265 Message: 4265

I could be wrong but it seems to me that the guys at 3C7Y are not working very many NA stations. I listened to them work EU on 17 meters for about an hour then work 3 or 4 NA, the work EU for an hour again.... Are they deaf to NA or what? I need 3C for an all-time new one....just one contact...any band....sigh...I have 500W and can't get thru the EU wall. When they are 579 here in 5-Land they are still working EU.

OK, I'm off my soap box.

Mark, your right, especialy weekends. They seem to hang with NA on 20 but
the other bands the EU stations seem to dominate.
I worked them 20 SSB mid-week and even then needed 1500 watts!
Good Luck

I noticed the same thing for hours yesterday with 3C7Y and 5L2MS on 20 meter RTTY. I really think it is propagation. I managed to get the 5L2MS sandwiched among many Europeans, but the 3C7Y I got late afternoon when propagation began to favor us. At around 2300z it was mostly US with an occasional JA.

Sure disapointed I didn't hear Graham so I could send my 'to the max' cq message. LOL

got a bit quiet during Mak off times.

But fun none the less.

I might make a suggestion that we make all modes, on the same weekend like QSO parties do.
At least until participation increases.
bonus points for working the same person on all three modes, lol

night all

Seems to me that there is a potential disincentive for the DXpeditioners and some of the DX to participate, since some of them (it is said) get a net income stream from direct QSLing. While it is cheaper for them than sending out buro paper cards, it would cut down on those envelopes coming in with greenstamps if it were known at the outset that their logs would go onto LOTW.

On the other hand, with the rising cost of postage and the falling value of the US Dollar, any USA DXCC chaser would have to be nuts to got take the effort to become a LOTW participant.

Actually it is 20,000,000. I am pretty sure the number on the LOTW site is for matches, which actually produces 2 QSL's for each one. I have seen their number frequently as an odd number, which seems to confirm my theory that it is a match. It doesn't go up 2 at a time in other words.

4286. DXCC Account Selection

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-10-28 15:13:16 UTC
From: dk1bx
Topic: 4286 Message: 4286

How can I change the DXCC Account Selection for an Application ?

For example:
I have worked BS7H on SSB and CW on 20m.
The Band/Mode-Spreadsheet on the DXCC Award Application, Part 1,
shows on the first BS7H-Row Mixed, CW and 20m marked and on the
second BS7H-Row only SSB (no mixed and no band).

On the application I would like to get credit for Mixed, SSB and 20m
for BS7H with one QSL. How can I manage this?

ALWAYS LOG YOUR QSOS IN UTC.
Never use local time, this will result in most of the qsos not finding a
match.

The best choice is set your computer to GMT.
No worries about DST etc.

Or
Use a logging or contest program that automatically adjusts your local clock
to GMT.

Folks,

UTC formatted date is certainly the date expected in any
QSO record/QSL.

However, some computers do not have (yet) fix for EST/EDT
new date change, and may calculate the GMT offset wrongly.

Well, Tim, as it was a LOTW contest, it would be more surprising if
you got a low LOTW QSL rate. Good to hear anyway.

I only operated the Makrothen RTTY, and not the not the off times,
so I still think it is incredible.

I looked at my totals for the LOTW SSB Contest and I only have
a 35% QSL rate. These were from my SSB contacts from the California
QSO party during the LOTW SSB Contest.

Interesting! I only started playing in RTTY contests 3 years ago. I only had 56 RTTY QSOs prior to that (from 1990 to 2004). I now have a grand total of 5321 RTTY QSOs. I have 2585 LotW RTTY QSLs. That is a 48 1/2 % LotW QSL rate. I'm sure anyone who RTTY contests would match that.

I guess it's
Radio + Computer = RTTY
RTTY + LotW = QSLs
QSLs = RTTY DXCC (I have 100) & RTTY WAS (need Vermont for LotW RTTY WAS)

Hi,

https://www.arrl.org/lotwuser/lotwreport.adi?login=rx9tx&password=XXXXXXXX&qso_query=1&qso_qsl=no&qso_withown=yes

Use the above command. You have to substitute your password for the XXXXXXXX in the above link. If your callsign is different than RX9TX or if you have different callsigns you have to change that too.

Thanks Richard, everything went smooth except that the freq value is
missing and Logger32 logbook window has a hole in freq column, which I do
not like much :(

Is there a way to add freq values to the LoTW report file?

Few years ago, I uploaded to LoTW the logs I inherited after W4FRU passing.
Been a while since I checked them.
Today I was quite surprised to see that almost all had made recent LoTW qsls
for people.

Apparently, many hams are transcribing their old logs into their computers
and getting them up onto LoTW.

Didn't see any from Old Hiram yet though....

Talking about music is like making love through mail.

Hi Thomas,

I do know that there have been issues with LotW going back about 6 months. As a result they have had programmers working on the problem. I believe this problem was caused by re-uploading of Logs causing LotW QSLs to go missing. There are even some QSLs missing that were not the result of re-uploading logs. I do know that the re-uploading problem has been resolved and they are working on getting those missing QSLs showing again. In any even I do know they are very busy.

I do know that no data has been lost and that this has nothing to do with the official DXCC database. This is only affecting what shows as LotW QSLs. In my case I had some LotW QSLs missing that I had used for DXCC credit yet my DXCC totals were correct. I also no longer have any missing LotW QSLs.

As to your specific problem, Thomas, care to elaborate? Maybe we can help.

Hi Art,

Thanks for your response.

On October 10th I zeroed out the hard drive of my computer and placed the Windows XP Home OS back on and of course tQSL v1.1 and then uploaded the .tq6 saved to a p-12 of my callsign KN4LF.

I upload and and download information using ACLog v3.0. I can download confirmed contacts from LOTW but can't sign and upload a new .adi file of contacts. I get an error that says that the contacts are out of range for date of the current KN4LF .tq6. The serial number of KN4LF that I have does not match the serial number of KN4LF that sits in LOTW.

Norm W3IZ told me that he would have to have my current KN4LF certificate deleted and then he would act on the new KN4LF .tq5 that I submitted back on October 11th. This was on October 12th, nothing has been done and I've been unable to get back in touch with Norm, nor make intitial contact with Katherine.

I've never had a problem with anyone at the LotW desk being unresponsive.
The most likely problem? You're using Earthlink. Either they're not
sending your mail, or (more likely) they are blocking the ARRL
replies, thinking they're spam.
Set yourself up an account at gmail or hotmail and try from there.

Ok I can't help on that. As you now know you can't save and reuse tq6 files. You have to same them as p12 files. Did you know you can always download all of your certificates in one file from the website? Obviously you cannot do that now because you've requested a new certificate. Though I guess you could give it a try. After logging in to the LotW website, go to Your Account tab. Click on Your Certificates and then click on Download your certificates. That creates a file named Certs.tq6. Click on it and it will load all of your certificates.

Subject: Re: [ARRL-LOTW] LOTW Problem

Hi Thomas,

I do know that there have been issues with LotW going back about 6 months. As a result they have had programmers working on the problem. I believe this problem was caused by re-uploading of Logs causing LotW QSLs to go missing. There are even some QSLs missing that were not the result of re-uploading logs. I do know that the re-uploading problem has been resolved and they are working on getting those missing QSLs showing again. In any even I do know they are very busy.

I do know that no data has been lost and that this has nothing to do with the official DXCC database. This is only affecting what shows as LotW QSLs. In my case I had some LotW QSLs missing that I had used for DXCC credit yet my DXCC totals were correct. I also no longer have any missing LotW QSLs.

As to your specific problem, Thomas, care to elaborate? Maybe we can help.

I've been having a problem with Logbook Of The World since October 11th. I have emailed Katherine Allison repeatedly but have heard nothing back from her, other than an automated email reply one time. Early on Norm Fusaro W3IZ was assisting me but now I am not receiving emails back from him.

Anyone else experiencing this communications issue?

The "certificates" on the LotW web site are incomplete since they
lack the user's "private key" - part of the public/private key pair.
That is why the instructions for tQSL say to ALWAYS back up your
key/certificate as a *.p12 file.

When doing a "clean" installation, you must have a valid *.P12
for at least your primary certificate in order to reinstall the
private key. Without the valid "private key' portion of the pair,
it is impossible to properly install or move the rest of the
application. This is just another case of RTFM ... simply
create a new (current) *.p12 backup EVERY TIME you renew a
certificate or create one for a new call/location.

Thanks to all that have responded to my query.

I did save my newest KN4LF certificate that I received in January 2007 as a .p12 file but apparently I then deleted it by accident and kept the one from January 2006, DOH!!!

Anyway I've never had an email problem with Earthlink but will try a different email address that I have on Yahoo. BTW as a member of the ARRL I did contact Dave Sumner K1ZZ and he told me that Katherine was ill and that he would relay my problem to someone else.

4319. Re: my old manager logs on LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-05 12:55:42 UTC
From: Russ
Topic: 4307 Message: 4319

I've been typing away, manually entering old QSOs, for the past month - now about 3750 QSOs. So far I've submitted all logs back to 1988 when I still had my old call WB2QJI. I am using Win-EQF which I have used for a long time as a logging program and is very fast for the data entry. The older logs were kept using local time but I've been able to convert to UTC by sucking them into DXKeeper and them spitting them back out again after adjustment.

Now I'm back to doing the mid-60s to early 70's logs and uploaded my Novice log (WN2QJI) from 1964-5. No LoTW matches on 858 QSOs back then but I have plenty of matches going back to 1988. I really would like to get some matches back to the 60s! There was some great DX and sunspots going on back then. I see that I worked ET3USA and VS9AWR on 15m CW as a wet-behind-the-ears 14 year old kid with the old Vibroplex!

Glad to hear others are doing this too. My wife thinks it is a little nutty!

Hi, I just started using LOTW and have a couple of questions.
Is there any LOTW documentation or a users guide that explains what the columns mean when you do a QSO query? I just started using LOTW and have uploaded 936 QSO's. When I do a query, I see the spread sheet form with the column headings. However there is a column with check boxes in it (some are checked and some are boxes that can be checked) and in the DXCC column I see the word 'Challenge' can someone please tell me what the check box is for and what the word 'Challenge' means?
Thanks and 73!
N1ORK - Andy

The spreadsheet form with column headings shows you which award or awards each QSL qualifies for.

An explanation of the DX Challenge award is available here:

http://www.arrl.org/news/stories/2001/05/08/3/

The checkmark in that column means the DXCC country (or WAS State)
is a new one for you for a particular band, mode, or band-mode.

The earliest QSL I have so far in LotW is December, 1978. I'm still typing in old paper logs; I should have them all uploaded in a few more years (only about 30K QSOs left to go!).

The fun thing is the memories that it brings back when I type in some of these old QSOs...:-)

I can't find my old logs, but I have a bunch of QSL cards going back to my old Tech call WA1PNI IN 1979. Most of the cards were for cw and a few on 6m am.
Would it be wise to get certificate(s) for my old calls (kn1wnw, wa1pni and n1cjg) and put the log info in by hand? Should I merge these later with my present call?
Thanks for the help!

From: Russ
Topic: 4307 Message: 4326

Hi Andy -

Regarding the certificates, that is what I did. I first got the primary certificate for WQ3X, my present call, and then later on got certs for WN2QJI, WB2QJI, and WB2QJI/3 which I used when we first moved to PA. The certs are signed with WQ3X so the QSOs are merged with the WQ3X logs. The callsign used is indicated when viewing the QSO, so they are separate but still usable under WQ3X for award credits.

I really wanted to do all this just to be able to know if I had worked someone before using my logging program. The LotW is just an added bonus. It is exciting though to see if there are any QSLs after uploading another portion of the logs. (I'm doing it a year at a time.) I still have some more QSO entry work to do - about 4 ARRL logbooks worth. I just wish my writing was a bit better when I was a kid!

4328. Dumb question about valid QSO dates

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-11 00:52:36 UTC
From: wd4elg_base
Topic: 4328 Message: 4328

This has happened several times, and I am wondering why...

I have a valid certificate through 2009-Nov-26, which was issued 2006-Nov-27. A three year cert. Works fine.

But the dates for valid QSO's only go through 2007-Dec-31. I was just looking at its properties and discovered this. And now I remember this happened before. Am I doing something wrong when requesting a certificate renewal? I don't remember seeing an option to select specific dates...did I miss something, or is this by design?

Thanks

Mark, WD4ELG

4329. Re: my old manager logs on LoTW

Well, I found my old WA1PNI log book that went from 1977 to 1982. Including my QSL cards, I was able to upload 142 QSO's on 11/8/07. So far, no QSL's from these. I'm averaging about 16% confirmations both in LOTW and eQSL. Boy! LOTW is so much more confusing than eQSL.cc! I wan't to merge my WAS contacts into one account so that all my USA QSLs from all of my calls would count toward one WAS award. But I don't understand how to do it. I tried to 'link' all my calls together, but I keep getting some reply that I don't have any dxcc credits:

"Date/Time From Subject
2007-11-06 19:15:01Z LoTW DXCC Account Link Request Rejected
We can find no DXCC record for the call signs you provided: N1ORK WA1PNI N1CJG N1ORK/P.
Please contact dxcc@... with any questions.

We can find no DXCC record for the call signs you provided: N1ORK WA1PNI N1CJG N1ORK/P.
Please contact dxcc@arrl.org with any questions."

I already merged my DXCC stuff to my present call and that part looks ok. There's no help file and no one returns the emails I sent to lotw-help@....
In other words, I have three calls (WA1PNI, N1CJG & N1ORK) that, if merged or linked, can count toward WAS. Those QTH's are all within 50 miles of each other and in the same county and grid, so they are within the rules. Maybe I just don't understand the WAS account rules.
I had no problem doing the same thing at eQSL.cc. At least I can see the other Ham's eQSL card, save it for future reference, and it doesn't cost me anything to apply for and print an eQSL DX or WAS certificate once I reach it.

Andy - N1ORK

4330. Mac OS X 10.5

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-12 15:57:34 UTC
From: John Graf
Topic: 4330 Message: 4330

I just upgraded to Mac OS 10.5 (Leopard). There are a couple of programs that don't seem to work under the new OS, and one of them is TQSL. Has anyone else run into this problem? Anyone know of an update or work-around? Right now I can use Windows (running as a VM on my Mac) to sign logs, but it is an extra and time-consuming step.

Thanks and 73,

John, WA6L

I haven't upgraded to Mac OS X 10.5 yet (part of the reason is that I'm hearing far too many stories like this, for a number of programs that I use every day). I remember that it seemed to take a very long time to get a version of TQSL that would work in Mac OS X 10.4 (Tiger).

It sounds like you have the workaround (use TQSL in Windows on the Mac). Since I may not go for Leopard until I upgrade from my G5 iMac and G4 PowerBook to an Intel machine, that may be what I wind up doing also.

4332. what's up with LoTW?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-14 18:01:25 UTC
From: FireBrick
Topic: 4332 Message: 4332

The delay is caused by the gazillions of new members who hurridly signed up with LoTW, after it was announced that:

LoTW is now good for credit of IOTA, Worked All Canada, Worked all Lighthouses, Worked all Counties, etc. etc. etc.

NOT!!!!!!

But if that announcement will ever be made....maybe there would be a rush of new members. <larconic smile>

Managing credits for other organizations' award programmes,
or providing data for back-door paper QSL card printing,
is unlikely.

However issuing 'certified' (electronic) GCR lists on
customized queries, may give boost to LoTW particiaption.

4335. Slow loading 4.5

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-14 21:31:47 UTC
From: Dave
Topic: 4335 Message: 4335

Looking to see if others might see the same slow loading of ver 4.5...
The loading time seems to vary. I just loaded LW4.5 on my Toshiba laptop (1.66 GHz with 1GB RAM) and it took just 38 seconds, which is a record. Previously, it's taken up to 90 seconds. I also just loaded LW4.5 on my Dell laptop (2 GHz with 640 MB RAM), which is the one I use for my radio stuff, and it took 108 seconds. I never timed LW4.1, but it seemed to load fairly quickly-at least quick enough that I never even thought about it.
Is this normal? Thanks all. Dave K8GVK

What is LW 4.5?

If you're talking about Logwindow 4.5, then their reflector can be found here:
http://www.logwindow.cc/LW_Support_page.html

This reflector is about the ARRL's Logbook of the World application. Are there any LW 4.5 users here?

4337. does lotw software use a 'cacheing' system

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-15 15:04:44 UTC
From: FireBrick
Topic: 4337 Message: 4337

I've noticed a definite difference in time when checking for lotw qsls.
When I check for my personal callsigns, I get a response showing any recent qsls very quickly.
Rarely does the response and data take more than a few seconds, if that.

But when I occasionally check to see if any of the stations I qsl managed it seems that LoTW takes longer to search and respond
The qsos took place in the late 80's and early 90's and probably aren't accessed very often.

Just curious, it's of no consequence to me.
But I figured there is some sort of 'prefetch' of recent qsos submttted and/or accessed.
Or maybe not. LOL

Well we would sure appreciate it if you would join LoTW.
Most of us pensioners can not afford to send qsls for every band and mode we work a station once we get the DXCC credit. Even sending via the bureau is getting expensive.

But we would appreciate LoTW qsls for those other bands and modes to increase our Challenge and band type credits.

It only takes a few minutes of making photo copies etc. to apply for the certificates.

I like seeing the cards also Steve, I'm sure many of us do.

Thanks for all the qsos in the contests. I hope you consider taking part in LoTW. I'm sure a lot of us on budgets would appreciate it also.

See you in the next contest...

You know, I have mixed emotions about that. While I've been on LoTW right from the git-go, and continue to enter old paper logs back into the 1960's (yeah, I know, I'm an old coot!), but I still absolutely love paper QSL's, and I look with some trepidation on the fact that LoTW is diminishing the use of them. Coupled with the fact that LoTW chooses to serve just two of the many reasons for QSLs, this is disturbing. May be time for a counter-revolution away from LoTW.

I LIVE for my cards, I love reading them, sorting them, data entry to my logging program.
(I'm easily amused).

And I've mailed thousands to the outgoing bureau.
I answer every incoming direct or bureau card.
BUT!!!

No room and no money.
I contribute to dxpeditions, and I like the picture cards. But it's just so much easier to apply for credit electronicaly.

If a qsl card is like a 'final kiss in the dark'.
Then a LoTW is like a ' electronic cup of coffee in the morn'.

4344. LoTW - contesting

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-17 15:09:42 UTC
From: K3MQ - Bob Johnson
Topic: 4344 Message: 4344

I do a lot of contesting. I'm not very good at it, but still make a lot of qso's - mostly in "search and pounce" mode. If allowed, I normally use packet clusters. My cluster program (Spotcollector/DxLAB) highlights any spots which are LoTW users.

Guess which stations are VERY high on my list to work? You got it - the LoTW guys. Since I'm in Delaware, I often represent a semi-rare multiplier and extra points. I would imagine there are many casual contesters who also place a priority on LoTW "friendly" stations.

It would be great if we could get the word out to the contesting community that LoTW participation has fringe benefits - better scores.

Subject: [ARRL-LOTW] LoTW - contesting

I do a lot of contesting. I'm not very good at it, but still make a lot of qso's - mostly in "search and pounce" mode. If allowed, I normally use packet clusters. My cluster program (Spotcollector/DxLAB) highlights any spots which are LoTW users.

Guess which stations are VERY high on my list to work? You got it - the LoTW guys. Since I'm in Delaware, I often represent a semi-rare multiplier and extra points. I would imagine there are many casual contesters who also place a priority on LoTW "friendly" stations.

It would be great if we could get the word out to the contesting community that LoTW participation has fringe benefits - better scores.

Hi Bob,

I'm a casual contester also. And I do a little more S&P than I do runs. I would bet that most contesters are not going to give a thought to LotW during a contest. Most are using real contest programs and those programs do not highlight LotW users. And even LotW users are going to work anyone they can during a contest.

My experience has been that contesters are very aware of LotW and more and more are using it every day. As an example, in the last few years I have 10,750 QSOs (most are contest QSOs). For those QSOs I have 4,048 LotW QSLs. That's 37.6%. That is a higher percentage of LotW QSLs than you are going to see from non-Contesters. Now here's the rub; the big LotW QSLers are RTTY contesters, followed by CW contesters, followed by SSB contesters. My percentage of SSB contest LotW QSLs low. Has anyone else gotten the similar results?

I guess it makes sense that RTTY contesters LotW QSL more than the other modes because they are more into computers and they are allowed to work USA stations in Contests where most CW and phone contester cannot (with only a couple of exceptions). However to my experience CW contesters LotW QSL more than SSB contesters. Why?

Geeeezzzz... I wish I had known about this BEFORE I made my trip to Grand Forks, ND to operate the ARRL CW Sweepstakes last weekend!

:-)

BTW, another operator/callsign will be on the air from the same location in a few hours. Also, the University club station will be operating. The ND section will be popular again in Sweepstakes Phone!

When you are traveling alone, you may need girl friends. This site will help traveling people to find casual love or Long-term. Before you travel to a city, you can browse girls' profiles who live in or will go to that city.

If there are nice girls, you can send invitation to them. They will welcome you. You can register for totally free.

If you are interested, you can join and place your profile via this link:

Bob,

Although I was able to work ND in the SSB SS this weekend, it sure was a lot tougher than the CW contest. Thanks to you, ND was not a problem for me but was sweating it out a bit until Sunday afternoon yesterday.

Please operate from ND next year too!

I am the V.P. of an ARRL Contest club that operates W3WPA. Since we started last year I would like to register us for LOTW and have 4 contest ADI files to confirm via LOTW.

What is the correct procedure to register W3WPA? Can I do it or does the Pres. have to register?

Thanks in advance.

If you have a certificate for your own callsign, you can submit a
signed certificate request for W3WPA.
If you don't already have a cert, the trustee will have to go through
the password postcard procedure in order to set up a new account with LotW.

I do not believe this is specifically covered anywhere in the LOTW web page. However, logically, it seems to me that who can register and submit is governed by your club's Constitution as to who is authorized to submit contest logs. Logically, all you are doing is uploading a contest log.

I'm a Director on the board of Minnesota Wireless Association, a contest club. When our club call (W0AA) is used by a member for a contest, that member is responsible for QSL chores. He can obtain a cert for a specified time period (as short as 1 day) to cover his operation with call. Then next weekend for another contest, a different member can obtain a cert to cover their usage of the call. Periods cannot overlap, so certs obtained must be limited to the actual period during which a member used the call on the air.

OK, I jsut went to renew, but unless I pick a date of 2008/12/31, I can't proceed to the next step for renewal. In the help file, it says I should leave it blank so that the expiration date will be the same as the expiration of the certificate, but it won't allow me to proceed. Anyone else seeing this behavior?

Nope. I just started up the renewal process and was able to leave the
"QSO end date" blank.
There may be some other certificate that's in the chain that's
expiring, though, which might be causing this.

To explain what a "certificate chain" is: my call is K1MU. I initially
registered that through the league using the postcard method. That's a
vanity call, and my original call was WA1SPT. I submitted a certificate
request for WA1SPT signed using the K1MU certificate. That's a chain.
When K1MU expires, it might also cause WA1SPT to expire as the 'SPT
cert depends upon K1MU to be valid.

If that's not the case (you have only one certificate that was issued
by ARRL directly), I'd send mail to the LotW team. They can look at the
content of the certificate and suggest corrective action.

4360. Old Callsign Registration

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-20 22:15:09 UTC
From: Scott L.
Topic: 4360 Message: 4360

I have been trying to upload my old KA3LUW callsign, but keep getting
the following error:

Started processing your New Certificate Request.
For call sign: KA3LUW
For DXCC Entity: UNITED STATES OF AMERICA (291)
For QSOs not before: 1983-11-25 00:00:00
For QSOs not after: 1992-04-27 23:59:59
Your DXCC entity indicates that you should have a US callsign.
Yet, your certificate request contains a callsign that is not in the
FCC database.
**Your certificate request contains error(s); please correct and resubmit.
See http://www.arrl.org/lotw/faq.html for more information.

I looked at the FAQ section on LOTW but doesn't really make any sense
to me. Any ideas?

4361. Re: question about WAS award accounts

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-21 01:33:14 UTC
From: Orest Zajac
Topic: 2891 Message: 4361

OK, I've read the messages below and as long as all former calls were
within 50 miles of each other, the QSLs would all count toward WAS.
My question is:
What are the steps I would need to take to link my former calls
WA1PNI, N1CJG and N1ORK to one WAS? I don't quite understand
the 'rules' I need to make, if any, to accomplish this? And once
done, how do I know if it worked?
My DXCC account shows that my former calls are linked:
This account includes credits for the following:
N1CJG - UNITED STATES OF AMERICA
N1ORK - UNITED STATES OF AMERICA
N1ORK/P - UNITED STATES OF AMERICA

The WAS page doesn't indicate if this is so.

Thanks
Andy - N1ORK

That seems pretty straightforward to me. There's no record in the FCC
database of KA3LUW being issued.
They seem to keep your prior call, but may not keep a record of the
original issuance.
You'll have to contact the LotW help desk to find out what to do;
they've got to have some way of fixing this as it can't be all that
unusual.

From: K0HB
Topic: 4366 Message: 4366

With just over 40,000 QSO's entered in LoTW, the earliest going back to 1965, my "QSL rate" just passed 18%. Not too shabby!

Looks like my return rate on the two recent contests (about 1,800 QSO's) is just under 30%.

Estimate I have another 25,000 QSO's in paper logs to transcribe some rainy evening. Or maybe not!

>Hans:

with almost 8000 qso's entered i have a reture of 826. or 10% that is
not really a great rate until i consider that 80% of my qso's are dx.
when i was contesting on rtty i uploaded all my qso's.and still find
one or two matches coming in a month. wish the cw and ssb contesters
would upload their logs like the rtty boys do. out of the 300 qso's i
had during the last 160meter cw contest i think only 10 had hits.
really poor results. since the guys use logging programs to score
their contests why not just upload them to lotw when you send them in
to the contest awards manager ?
have a wonderful Christmas Hans

>Anyone else seeing this behavior?

Have you had a look at the logs for your recent submissions? There may be something causing the new QSOs to be discarded. (One reason for this is that there is a valid QSO date range which is separate from the validity range for the certificate.)

Log in the LotW, pick "Your Account", then "Your Activity". Use the "Result" link for one of your recent submissions to see what LotW did with it.

I noticed Hans said he had QSOs in LOTW going back to 1965. That made me think - I've got QSOs in LOTW beginning in 1961, but the earliest QSL I have is from September, 1975. I wonder who has the earliest QSL in
LOTW?

I have 17 matches in the 1960's when I was KG6AQI.

1966 = 1
1967 = 4
1968 = 9
1969 = 3

My earliest (and only) LoTW QSL w/K0XB was in 1997. Guess I gotta get on rtty more! I put a new microKEYER-II online a couple weeks ago, so maybe we'll meet there.

When are you going /6? We leave Jan 5th for our spot in the Superstitions. Plan another sojourn to Chaco this spring.

4373. Missing QSLs in LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-26 19:14:49 UTC
From: James M Punderson IV
Topic: 4373 Message: 4373

A few times over the last several months, I have noticed my QSL count on LOTW go down. Since my logging program, AA6YQ's DXKeeper, separately connects to and tracks LOTW QSLs, I decided to compare my log to LOTW, using a procedure that Dave, AA6YQ, came up with to see which ones were missing.

To make a long story short, what I found was that 6 QSLs had gone missing on LOTW. I had uploaded my side and the other fellow had uploaded his matching side but they were no longer shown as QSLs in the LOTW system.

So I re-uploaded the six of them and all now show as QSLs and my DXCC Challenge total is back to what it was supposed to be.

Interestingly enough, one of the missing QSLs, had disappeared and reappeared four times previously.

Hi Jamie,

I had the same problem going back to June (I think). Over the months since I'd been in contact with many people at ARRL. They were aware of the problem and it required re-programming of their software to fix. Another problem and one of the causes was users upload the same QSOs more than once. I know they've fixed that uploading problem, oh, I'd a say approximately 2 months ago. Then they said there were still working on the missing QSLs. I had over a hundred. Since they said they fixed the multiple uploading problem I took matter into my own hands and re-uploaded my missing QSL. That fixed my problem completely. I haven't heard or inquired about ARRL's fix for missing QSLs. So I don't know if that has been done.

4376. QSL's after CQWW CW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-11-30 15:25:47 UTC
From: Phil Cooper
Topic: 4376 Message: 4376

Hi all,

After almost any RTTY contest, I get pages of matches within hours of the end of the contest. I have got quite used to this, and it is very pleasing. Usually, within a week, I have confirmations for about one third of my log.

I dabbled in CQWW CW, as I have decided I want to claim DXCC on CW (just to prove I can do it!), and tried to work as many new ones as possible.
Today, some 5 days after the contest, I still only show 25 matches! And quite a few of them are from ops that use RTTY as well.
Just goes to show that the CW crowd don't seem to have embraced LoTW as much as the RTTY folk!

The only one that surprised me was PJ2/K8ND, who I worked on Tuesday morning on 40m CW. By the end of the day, confirmation was on LoTW!

Hi Phil,

Your results are not unusual. I play in both CW and RTTY contests and I get the similar results. I thought about this and I can guess why. Part of it is everyone who does RTTY is utilizing their computers more. The other reason is more US stations participate in LotW than DX (it's easier for us to do so). Since you were chasing DX, you didn't work as many US stations. For us here in the US we are allowed to work US station only in RTTY contests for the most part. Anyway, that's my opinion, though I do see more and more DX participating. But for the most part, US stations = the bulk of LotW users.

In the CQWW CW contest I did as you and mostly only chased new DXCC band countries though I couldn't resist trying to crack other pileups just for fun. I only made 65 QSOs and I have gotten 4 LotW QSLs so far. My total log numbers are 15,177 QSOs with 4,118 LotW QSLs for 27.1%. My RTTY totals are 5,364 QSOs with 2,617 LotW QSLs for 48.8%. My CW totals are 8,547 QSOs with 1,449 LotW QSLs for 17%. And Phone QSOs are 1,266 and 52 LotW QSLs for 4.1%. This low percentage on phone is because 1,134 of these QSOs were prior to 1997. I can't take the 20 meter zoo.

That submit to LoTW after a contest.
I was pleasantly surprised to find dozens of LoTW qsls in my account from
people I worked in the ARRL 160 cw contest over the weekend.

Picked up a few more 160 states.

Thanks to all.

I just checked and my ratio is 1:5 used LOTW so far. I had 55
confirmed out of 262 confirmed so far. This is a much higher ratio
than I expected. Usually the best ratio for me is RTTY contests for
LOTW confirmations.

I just realized that two or three years ago I uploaded the log for J3/W1RH. I have the certificate and can see the uploaded QSO's but, to date, I have not received any QSL's. Now, there were only 200 Q's in this upload but I have received many paper QSL's. Before I upload the huge logs for J37VG, I want to make sure I did not do something wrong.

My own call sign shows QSL returns weekly so I know how to do it. Any ideas why I may not have received any confirmations on the J3 log? Anything different about a DX log that I might have missed?

Bob

I've worked a lot of J3 stations over the years but I did not work any
version of J3/W1RH.

Please give me the years of operation so I can search.
not when you uploaded, but when the operation took place that you signed
J3/W1RH

It's hard to believe that you did not get even one LoTW.

Topic: 4385 Message: 4388

In TQSL the section you use to 'sign' your logs, go to File>Preferences
Select ADIF Modes
Add
Enter PSK63F into the box
scroll down to PSK63

and hit enter

Now it will correctly decode 63F as PSK63

This has to be done for each 'variant' of the new digital modes as they
appear.

4392. "TI" confirmation problems

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-12-06 05:43:27 UTC
From: Joe K2UF
Topic: 4392 Message: 4392

Has anyone rcvd LOTW QSL's from TI5N ? I worked him many times in the past several years during contest. I was told that the logs were uploaded and LOTW says that their log was last uploaded after the 2007 ARRL DX contest. I have rcvd QSL's from several stations on either side of the TI5N Q's so I know my times are within the 30 minute window. Any ideas ?

73 es Thanks

Joe C. K2UF

4393. Re: [ARRL-LOTW] "TI" confirmation problems

Yahoo group: ARRL-LOTW (2003 — 2007)

From: Clark L. Stewart
Topic: 4392 Message: 4393

Joe,

I have 13 QSO's for TI5N uploaded to LoTW but NONE of them have been
QSL'd there. Looks like he may have a problem with the logs he has uploaded.

Hi,
tnx for info , Yes TI5N also for me NOT confirmed, 5 qsos from 2000 and 2003 .
But , Your qsos is NOT confirmed too- for illustration my qsos with Ingus /YL2TW -
for confirmed in last column staying name of country .
Last upload for *TI5N*: 2007-03-30 15:23:43Z - LoTW say that, but strange anyway....
Maybe someone have closer contact with someone from TI5N team in 2003 RTTY WPX?

Hi,

I have 7 QSOs with TI5N. All uploaded to LoTW.

One has been confirmed. It is a SSB QSO on 20M from
March 4th of this year, made during the ARRL DX contest.

I do not find anything different on my end that would have
caused this one to be confirmed while the others were not.

73,
Jim

I have 30 contacts with TI5N since December of 2002. NONE have been confirmed via LotW.

I have two paper QSLs that I received for a couple of the contacts, via W3HNK. TI5N QSLs are no problem, just not via LotW.

The Remarks at QRZ.com say that TI5N is a call used by guest operators at TI5KD.
I am speculating that it is the guest operators who do or do not upload the
logs.

Has anyone rcvd LOTW QSL's from TI5N ? I worked him many times in the past several years during contest. I was told that the logs were uploaded and LOTW says that their log was last uploaded after the 2007 ARRL DX contest. I have rcvd QSL's from several stations on either side of the TI5N Q's so I know my times are within the 30 minute window. Any ideas ?

Hi:
I have 10 QSO's in the log from TI5N between 2001 and 2007. All SSB contests.
Only one confirmed is for the 2007 ARRL DX contest.

CQ WW SSB 2007 has not been confirmed yet.

Maybe they just joined LOTW and are working on uploading QSO's from latest to oldest.

Joe,

When I started using LOTW the hit ratio was around 5% when comparing too E-QSL at 10%. I have over 4500 QSO logged in both locations and as expected E-QSL has about 10% confirmed with a authentic user while LOTW confirmation, from authentic users, is now up to around 13%. Don't give up on LOTW and or E-QSL, there both fun to use.

QSLing via bureau's is also recommended and lots of fun. When it comes to TI5 via LOTW I know that TI5A has QSLed OK using LOTW

Merry Christmas and a Happy New Year.

4406. TI5N QSL's from LotW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-12-07 03:52:25 UTC
From: Joe K2UF
Topic: 4406 Message: 4406

Thanks to all for your response to my question. It looks like there is a problem. It may be that only selected logs have been uploaded. I came across this problem when I was trying to finish up my 80 meter QSL's for my 5BDXCC CW cert. I know there are other DX QSO's in my logs that have the same problem. I am going to try compiling a list and see if I can get any answers from Newington. I have a 20+% QSL rate with 28000+ QSO's in LotW which seems very good compared to some of the comments in responses to my previous question.

Have a good and safe holiday season to all

Hi all,

I have two contacts with TI5N on RTTY. One on 10m from Feb 2003, and one on 40m from Feb 2007, and neither are confirmed on LoTW.
Fortunately, I don't "need" either, as I already have TI confirmed on most bands.
However, it would be great of TI5N could get any problems sorted out for LoTW.
There are quite a few LoTW users that upload VERY infrequently, and some have not done an upload since LoTW started.

I am currently running at about 25% of my logbook (around 13k QSL's from 51k contacts) being confirmed on LoTW, which is amazing.

4408. Awards 'Linking' question

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-12-08 16:25:19 UTC
From: FireBrick
Topic: 4408 Message: 4408

I think I know the answer but here's the question.

I have/had 3 callsigns
WN9VOL 1967
WA9VOL
W9OL

I have certificates for all three.
I have worked DX on all three.
I have submitted logs for all three.

But only WA9VOL and W9OL show up as linked in the awards page.

now I 'think' (this is where I get in trouble) that the reason WN9VOL does not show up as 'valid to be linked' is because it doesn't have any LoTW qsls.

Even though many of my original DXCC application did in fact contain qsls for WN9VOL.
It appears that none of the many qsos I had as a novice matched with anyone submitting their old logs.

I realize not many people have transcribed logs that old onto their computers.
But maybe some reader may look through their 1967 logbook and find me.
Sure would love to get one of those, just for the heck of it.

Maybe you could test your theory by generating a fake QSO between WN9VOL and W9OL? (They do this time warp stuff on Star Trek all the time, you know.)

Or maybe we worked each other in the '60's? Naaa... I doubt it...

Hi Bill,

Same situation here. I have 2 calls I do not have QSLs for and they don't show as linked. You can test to make sure these calls are linked by logging in underW9OL and then try to look up QSOs with WN9VOL. If you can look up the WN9VOL QSOs when logged in as W9OL then it is linked.

I don't think that matters. What does matter is if there's a
post-computerization DXCC account for the callsign. You probably have
just a WA9VOL account that also has QSOs from WN9VOL.

4413. LotW DXCC application processed in 5 days

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-12-09 19:10:07 UTC
From: Art Searle W2NRA
Topic: 4413 Message: 4413

In light of Bill Moore's DXCC Blog posting indicating the current backlog in processing DXCC applications is estimated to be 15 Weeks, I though I'd mention this. On 4-Dec-2007 I submitted an all LotW QSL DXCC application (update - not new application) of 18 LotW QSLs. I mainly did it for the LotW QSL that put me on the CW Honor Roll. Well the ARRL processed my application in 5 days. It appeared on my LotW page and the CW Honor Roll listing some time today. So I guess the computer people are working on Sunday.

Anyway LotW DXCC applications are an alternative to the 15 week wait. Of course you can always go in person to ARRL HQ with your cards and not have to wait.

I sent in paper QSL cards for my last 3 entities for
mixed #1 Honor Roll (logged in Sept 24) and received
the credits about a week later. But they still have
the cards and I expect it will be another month or so
to get them back. So it is not just LoTW for instant
credits. Maybe it was quick because there were only 3
countries? They could be using a 2 step process -
maybe screening out the easy ones for quick action.

I think the DXCC desk is probably really swamped with
all the BS7H cards coming in this year.

Topic: 4414 Message: 4416

You're right, Russ, they will process a couple of cards quickly but the number is small. Anything over a few cards and you're going to have to wait. The BS7H cards have been out for a long time. I got my cards in May and LotW QSLs in June so I don't think that is the reason for the backlog.

I know that there was a problem with the LotW system that the programmers were working on. That may have contributed to the backlog. When I was there in June I remember Bill telling me there was a change made that contributed to the backlog increase in the early part of 2007 and that they were expecting to work that backlog down. I guess they haven't. I had an update in April that took 84 days to process and 97 days to get the cards back. That was by far the longest. I did 6 updates in a year to get my Challenge, Mode and Band DXCCs up to day. That was a lot of work!

Hey Russ, contrats on the #1 DXCC!

From: FireBrick
Topic: 4429 Message: 4429

I'm please to see the LoTW site report that the amount of qsos in LoTW has doubled since 2005.
Looking at the graph on www.hb9bza.net/lotw/#howtohelp

It looks like Users have also doubled since 2005.

I'm sure the DXLabs easy upload/dload system has contributed greatly.
I know for certain the digital dxing/contesting ops are doing their part.
Wonder if the LoTW Specialist has ever broken down the ratios between modes and users?

The LoTW home page mentions that new awards will be added in 2008.

My cw and digital buffers all say 'I qsl via LoTW daily'

Happy Holidays to all.

May all your family trees branch toward the stars!

4430. DXCC and LogBook of The World Applications

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-12-21 18:18:26 UTC
From: Art Searle W2NRA
Topic: 4430 Message: 4430

The following was posted on the LotW Blog today:
DXCC receives a number of applications where applicants ask DXCC staff to prepare LoTW electronic applications for them as part of a hybrid application. This is a reminder that only the owner of a certificate can access their personal account and prepare electronic applications associated with that account. DXCC staff cannot prepare electronic applications for applicants. LoTW involves fees and selection of certain QSOs and DXCC staff cannot make this determination.
Also, DXCC handles a number of Hybrid applications where cards and an LoTW element are intended to be handled as one application. It is EXTREMELY important that the LoTW element be done first. If you send cards and do the LoTW element later on, it is likely that DXCC will handle each application separately and this involves subsequent submission fees noted in Rule 15. So, please be sure to do the LoTW portion first.
Also, with hybrid applications please be sure to complete all sections of the electronic application. In addition, this includes on screen part 2 where it asks if paper QSOs will be sent as part of this application. Even of you visit a local card checker, if you prepare a hybrid application make sure you place a positive number in this box to avoid paper and LoTW applications from being handled separately, again subjecting the application to higher fees.
For information on the step-by-step instructions on preparing hybrid applications please visit the FAQ on the DXCC web site (www.arrl.org/awards/dxcc). There is a section near the end to help with DXCC and LoTW.

Hi Byron,

No you cannot download your DXCC credits other than LotW. However, assuming you have all of your callsigns linked to your DXCC record, when you log on to the LotW website, Left-Mouse-Click on the Awards tab. Then click on "Select DXCC Award Account, this will show you a table of what is credited. Just below the table is a link "View Award Credit Matrix." If you click on this link you will see your complete DXCC matrix.

I am also pleased with progress of LOTW. HB9BZA has provided a lot of analysis and useful information about LOTW and it's users.

I have been concerned about sending him information from my LOTW downloaded
files since I chose to combine my Non-Lotw DXCC records with my LOTW confirmations.

However, last night I downloaded my LOTW ADIF file, and it appears to contain only the listing of LOTW confirmed contacts, not the "Card" Confirmations from the DXCC desk, although the "Card" info is available on
LOTW. Can anyone verify that this is the case?

To down load your total credit matrix, do as Art says but when in the matrix, highlight (left click and drag) the total matrix (not select all, as that will include the LoTW table above it). Right click on the highlighted matrix and select COPY. Then open Word or Excel and paste the matrix file into either of these applications. Word will allow you to print nicely and Excel will allow you to digitally convert or import to other application (maybe using .csv format).

4441. 1966 QSL!

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2007-12-27 02:10:46 UTC
From: Russ
Topic: 4441 Message: 4441

I am still working on entering the old paper logs here. I just uploaded the 1966 log to LoTW for my old call, WB2QJI - 1241 QSOs - and got my first match from the sixties. It was K3WWP on 40CW during the 1966 NJ QSO Party.

To me this makes all the typing and trying to read my writing from when I was a kid worthwhile.

Woo hoo! 1967 is next. (I'm hoping 1966 was the QSO peak. The number of QSOs started to taper off once I found out about girls, cars and motorcycles.)

Russ,

I don't know how you're manually inputting you old logs but I did about 6,000 old Qs. I used EXCEL for data input (saved in .csv) and the BV http://www.df3cb.com/bv/ to convert to ADIF. Found this was pretty quick compared to inputting into a logger (I uses Logger32) or the LoTW manual input tool.

Hi Gerry and for those interested -

I'm using Win-EQF for QSO entry. I've used Log-EQF and Win-EQF for a long time and it is fast in the manual entry mode - almost as fast as a straight spreadsheet (which I played with also) but has some nice features like filling in the name and QTH data on repeat QSOs, plus the DXCC entity info. I played with DXKeeper too but for me it is not the right tool for fast data entry. DXK does have many strong points though and I do use it for doing the local-->UTC time conversions once the QSOs have been entered.

One feature I really like about Win-EQF is the ability to have small individual logs - I do it by year or sometimes for a specific contest - and you can merge all these into a "master" log which can be selected to use for automatic past QSO lookup.

Hi David,

Since you cannot specify the state of the station you are working in the LotW software I assume you are referring to a message from your logging software. I'd guess that you have the state abbreviation wrong in that software. It should be MN for Minnesota. But to be sure I'd direct your question to your logging software's reflector. If I'm right about this, it should have no bearing on your actual LotW WAS status which you can check for yourself on the LotW website.

Subject: [ARRL-LOTW] QSO does not match WAS Award Account parameters

Hello to the group
I am recieving a message next to my states worked

KR4OW K0TI 2007-12-01 07:14:00 160M CW 1800 UNITED STATES OF AMERICA !
M* Minnesota: Basic; 160M; CW; 160M CW

M* = QSO does not match WAS Award Account parameters

What am I doing wrong?
David KR4OW

This is the message is LOTW that is at the bottom of the screen.
and next to the check box for your basic/band box for that state I
checked the box but I still don't show in my state awards the states
that I checked. So I figure that I am doing something wrong. These
are legitimate QSLS from lotow so I know its something I am doing

Hi David.
What tabs in LoTW are you accessing to recieve this message?

I have looked at your account and the QSO for K0TI has MN as the State. (see below)

73 es HNY,
Norm Fusaro, W3IZ

Station
Call Sign KR4OW
DXCC UNITED STATES OF AMERICA
Worked Station
Worked K0TI
DXCC UNITED STATES OF AMERICA (291)
CQ Zone 4
ITU Zone 7
Grid EN34mv
State MN
County WASHINGTON
Date/Time 2007-12-01 07:14:00
Mode CW (CW)
Band 160M
Frequency 1800
QSL 2007-12-30 17:57:28

When you set up a WAS account on LotW, you provide it with a selection that tells LotW what QSOs are valid for WAS for that account. This is done because you may have lived in multiple locations, and as far as I understand it you must restart WAS if you move more than some set distance. (I'm hazy on the WAS details as I don't chase WAS.)
When you set up a WAS account, you tell LotW how to select QSOs that are valid for that account. For example, you can say stuff before a given date, after a date, etc. What LotW is telling you above is that you have a QSL, but your rules for your WAS account say it's not valid.

Look at your account setup: LotW Awards tab, select your WAS account, then pick "Modify Account". What are the rules applied to that account? You need to have something - in my case I have "Your DXCC Entity = United States of America".
